THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOL. IV. SACRAMENTO, THURSDAY, JULY 5, 1855. NO. 1.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

PUBLISHED EVERY THURSDAY MORNING.

BY WARREN & SON.

Office—on Fourth street, between J and K, Sacramento.

TERMS.—*Six* dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis. A limited number of Advertisements inserted at fair rates.

AGENTS.

J. Q. A. WARREN, Boston.—*For all the Eastern States.*
Messrs. WELLS, FARGO & Co.—*At their Offices throughout the Country.*
PACIFIC EXPRESS COMPANY.—*At all their Offices in the State.*
L. P. FISHER, *Newspaper Agent, San Francisco.*
Messrs. HAVEN & BAKER.—*Nana City and County.*
GARDNER & KIRK, *Newspaper and Booksellers, Sacramento.*
Messrs. LANGTON & Co. *for Downieville, Foster's Bar, Goodyear's Bar, Minesota.*
Messrs. LELAND & McCOOMNE—*Crescent City, Port Orford, Uniontown, Eureka, and Bucksport.*
SULLIVAN'S newspaper stand, No. 5 Post Office Building; KIMBALL'S, Noisy Carriers Hall, Long wharf—*San Francisco.*

P. Freer, *Bidwell's, Butte Co.*
D. G. Waldron & Co. *Coloma.*
Treadwell & Co., *Marysville.*
James & Co., *Napa.*
A. W. Potter, *Nevada.*
Nash & Davis, *Placerville.*
C. O. Burton, *Stockton.*
Dr. Thomas J. Harvey, P. M., *San Luis Obispo.*
Cram, Rogers & Co., *Yreka.*
Howard & Chamberlain, *Un'n City, and Mission au Jose.*
A. Hunnewell, P. M., *Columbia.*
I Coffin, *Mokelumne Hill.*
Gen. M. M. McCarver. *Mount Farm, O. T.*

Worth & Sturgis, *Martinez.*
Benj. Dodd, *Benicia.*
J. M. Thorburn & Co. *New York City, N. Y.*

*** *Postmasters throughout the State are kindly invited to act for us.*

We desire our Agents to report to us on the 1st of every month, the increase of names and the prospects, together with the amount due the office.

AGRICOLA'S LETTERS.—NO. 6.

On Watering of Plants—Continued.

EDITORS FARMER: That there is an analogy between plants and animals, every one perceives; but yet, with many points of resemblance, there is, among others, one striking particular in which they differ. Animals, at all times, inhale oxygen, and, at all times, exhale carbonic acid gas: while plants, by day, inhale carbonic acid gas, and exhale oxygen. Thus, the one is admirably contrived to neutralize any disarrangement of the atmospheric elements, which might otherwise have taken place, had it existed alone. To make animals have an inherent heat in themselves, they are furnished with absorbents and conduits, by means of which they take up carbon from their food, and through which it is carried and mingled with their blood; and the blood, so charged, coming into contact with the oxygen of the atmosphere in the lungs, undergoes partial decomposition, producing heat, and carbonic acid gas is thrown off as a necessary consequence. Plants, as we have seen in last letter, are regulated by a chemical process entirely different, which enables them, during the day, to decompose carbonic acid gas and exhale oxygen. But when the sun sinks below the horizon, and the coolness of evening and the decrease of light, consequent on his departure, succeed, the plant, which, be it recollected, had been perspiring all day and consequently depending for the moisture it was thus deprived of on what it could obtain through its roots, relaxes its energy, which is now but little wanted, the sap soon gets saturated with carbon, and not being replaced by other of a more alkaline character, in the same vigorous manner as during the day, and the temperature being so much lower, the chemical decomposition which took place by day, cannot, under any circumstances, take place now; and the plant being but partially able to resist the oxygen of the atmosphere, a process similar to what takes place in animals ensues, and carbonic acid gas is evolved. It is no doubt to the advantage of the plant to get quit, in this manner, of any portion of itself which has become effete and exhausted, as in the case of animals; besides, it is thus enabled, during night, to preserve a temperature which otherwise it could not have retained.*

Thus we see, that, when we water plants in the evening, they are then very different from what they were by day; no other effect occurs than what nature herself is about to superinduce; no great revulsion is occasioned, for they are fast getting towards the temperature of water; and besides, there is not now heat enough in the atmosphere to evaporate the water applied to their leaves, and, till such evaporation has taken place, they are thereby protected against the atmospheric oxygen.

The same thing (or nearly so) takes place during rain by day, at any temperature. At such times, as all farmers know, when the rain is over, there is no drought. The clouds hang heavily around, as if unresolved whether to rain or not; and then too, as all housewives know, clothes hung out to dry, are suspended for a long time before they do so. Even before the fall of rain, the air gets cool and vapory, and the temperature of plants is consequently being fast reduced, and a preparation for a similar process as occurs at night, is being made. Only look at them on such occasions, how they fold their leaves together and hang down their heads, as if, in regret, they humbly confessed they were not on the same terms with Nature as generally.

Let not the gardener, therefore, suppose that the evident analogy between plants and animals, is greater than it is; and when, in a warm summer day, he gets dry and feels all the advantage and comfort of a refreshing drink, if he see his plants look shrunk and dusty, that they want one too, and for exactly the same reason. It is very likely they do want it, but they must receive it, as we have seen, at the proper time; and, when then applied, the benefits to be derived from a necessary supply of water, are great and conspicuous, and the causes of its good effects easily accounted for.

The water of chemists (H O) is composed of one atom of hydrogen, and one atom of oxygen; but the purest water which we find in nature contains, besides these elementary gases, a number of adventitious ingredients, all of which enter into the composition of almost every plant which grows. Rain water, the purest of any, contains carbonate of ammonia, one of the most valuable of the constituents of guano. "It is worthy of observation," says Lichig, "that the ammonia contained in rain and snow water, possesses an offensive smell of perspiration and animal excrements,—a fact which leaves no doubt concerning its origin." But let me quote from Pureira: "A carbonaceous (sooty) substance, and traces of sulphates, chlorides, and calcareous matter, are the usual impurities of the first rain water of a shower. Carbonate of lime, and, according to Bergmann, chloride of calcium, are constituents of rain water. Zimmerman found oxide of iron and chloride of potassium. Brandes detected various other inorganic substances, namely: chloride of sodium, chloride of magnesium, sulphate and carbonate of magnesia, and sulphate of lime. He likewise mentions oxide of manganese. The putrefaction to which rain water is subject, shows that some organic matter is present." These are high authorities, and we have no reason to doubt their testimony, especially when we reflect that the fragrance of so many plants is being exhaled into the atmosphere, and that these salts and oxides enter into the composition of almost every plant which grows. But, as I said, rain water is the purest of any. The water of springs and rivers necessarily contains, in increased abundance, the same ingredients; from the fact that they abound in all soils, and that water is a solvent as well as an absorbent. The Thames water, above London, contains in every gallon about twenty grains of solid matter; and the Colne, at the main spring in the valley which supplies it, over twenty-two, according to the analyses of Phillips; and decomposing organic matter, in suspension or solution, is found in all river water in a greater or less proportion. These are facts which have been subjected to different calculations; and Dr. Dana, one of the greatest of modern mineralogists, estimates the quantity of salts in solution, and vegetable matter which were borne sea-ward past Lowell, by the Merrimac River in 1848 as reaching the enormous amount of [illegible] tons.

Such being the case, when we apply water to our plants, we not only provide a substitute for the moisture which has been evaporated from them in the form of perspiration; nor merely a solvent capable of reducing the fragments of rocks and stones in the soil, so as to enable their roots to procure from them those salts and alkalies, so essential to their growth and existence; but we actually apply a liquid manure, already containing the constituents of which they are composed. We must not, however, be misled by any false notion, that the more water we apply, the greater the benefit we must derive, as it is only so much that the plant requires and can make use of; and any more, in addition to what is necessary to preserve the soil in proper mechanical consistency, is, in land under cultivation, only injurious.

AGRICOLA.

P. S.—In last number, you make me undertake to say that on this occasion I would explain why it happens that it is so injurious to water plants during warm weather by day, when it is not only innocuous but beneficial to do so "in the country." Of course every one will perceive that this was a misprint, and should have been "in the evening." A.

[From the Valley (Mo.) Farmer.]

Virgil on Agriculture.

ARKADIA, Mo., March, 1855.

MR. ABBOTT—SIR:—At the suggestion of a friend, I have translated some of Virgil's first Georgia, where he gives us his opinion or rather his system of cultivating land—not for adoption, of course, but for the gratification of those who wish to compare the state of agriculture in the height of Roman prosperity, and the present. If you think it will do any good by familiarizing any of your readers with the science of their calling (for I deem agriculture a science, and the chief one to be chosen for happiness,) I say if you think it likely to do good and feel so disposed, you can give it a place in your excellent and highly useful periodical. I do not give it as an elegant translation, but almost literally and as intelligibly as may be. After invoking the several deities, &c., he thus begins:

"Very early in the spring when the melted snow flows from the hoary mountains, and the mellow earth crumbles at zephyrs—even then let my steers begin to groan at the plow, deep in the earth, and let the plowshare begin to grow bright in the furrow. That harvest will finally respond to the vows of the anxious farmer, which has twice felt the sun and twice the cold. (i. e. which has lain two years) his immense harvest will almost burst his barns. Before we cut the plain, whose qualities are unknown to us, there must be a care to learn the winds and various nature of the climate, and also the culture of our fathers, and the habits of different soils—what each region will bear, and what refuse—here vines—there grains more luxuriantly grow—the nurseries of trees elsewhere, and herbs spontaneous rise."

After enumerating several instances, he thus concludes:

"Nature has imposed these laws and eternal conditions on certain places, ever since the time when first Duncalion threw stones upon the earth, from which men sprang a hardy race, (i. e. ever since the creation.) Come therefore, and early in the first month of the year let the brave steers invert the rich soil, and let the pulverizing heat by mature suns bake the upturned soil sod: but if the land be not rich, it will suffice to turn it with a light furrow even as late as the rising of Arcturus (in the fall); in the former case, (i. e. in rich land, plow early and deep) in order that the weeds may not oppose the joyous crop; in the latter case, (in poor land, plow late and shallow) lest the scanty moisture desert the sandy, sterile soil. Moreover, you should permit the newly shorn lands to rest alternate years, and the idle plain to harden with sward, ere the year being changed sow yellow wheat on the land off of which you have gathered the joyous pulse whose waiting pod or the tender offspring of vetch and fragile stalks of the bitter lupine and sounding grove; for a crop of flax and oats will burn the land, and also poppies [illegible] with drowsy sleep, yet the cultivation of these will be easy every other year. It must not be come there to saturate dry soils with rich compost, nor to strew mellow ashes over the worn out fields. Thus your land [illegible] by the [illegible]; nor in the mean time will [illegible] untilled. (A fallow) [illegible] advantage to have [illegible] the [illegible] they either draw out the latent powers and food of the land, [illegible] every [illegible] destroyed by the [illegible] noxious moisture is dried up, (if the land be wet.) Or again, the coloric opens more pores and the close passages relax, through which the sap may reach the young plants, (as in close, stiff land.) Or lastly, the heat hardens the ground and closes the gaping veins, so that neither the fine rains nor the more efficacious power of the glowing sun, nor the penetrating cold of Boreas, can prove injurious. He will benefit his land who breaks the inert clods with harrow, or draws over it the [illegible] drags. Ceres, the goddess of the golden harvest beholds him not in vain from Olympus. He too, does well, who cleaves the ridges that rise in the field once broken, by plowing it again in an opposite direction; also he who gently exercises and governs his field. Let farmers pray for wet summers and dry winters. Sown grain is most fruitful, and the field by hibernian dust. Mysia exults more in no culture this kind of seasons, and Gergarus of Mt. Ida, admires his own harvest. What shall I say of him who follows his fields after the seed is sown and breaks down the clods and ridges of his barren land, and who moreover, conducts the flowing stream and enough of water into the same? Also, when the field is scorched and the herbs are dying, behold! he leads the stream from the brow of the craggy steep, which falling down smooth rocks, awakes the hoarse murmur and tempers the thirsty soil with its streams? What of him who, lest the stalks bend with heavy ears, feeds the corn luxurient in tender herbs, when first the blades equal the furrows, and who draws from the soaking sand the collected water of the marsh, especially in the variable months when the abounding stream overflows and covers all things far and wide with slimy mud from which the hollow dykes drain the water? Nevertheless, (after the exertions of men and oxen have been tried in cultivation,) still the wicked goose, Stramonian cranes, and succory with bitter roots, may injure, or the shade may destroy. Father Jove himself, wished the way of cultivation not to be easy, and mortal minds with cares, first preferred the fields to be cultivated through art, not suffering his own kingdoms by heavy sloth to grow torpid."

The author here continues with the deeds of Jupeter, which are foreign to our end, and the rise and progress of civilization—stating that—

"Incessant labor and want, urgent in adversity, conquered all things. * * * * But unless you tear the earth to pieces with assidious harrows, and frighten the birds with noise, restrain the shade with pruning knife, and invoke the gentle shower with vows, alas! thou shalt gaze in vain at the ample pile of another, and be compelled to appease thy hunger in the woods under the shaken oak."

He then mentions the utensils necessary for farmers,—

"All of which, provided long before, he should be mindful to store away, if a reward of the divine country, worthy of thee, remains for the industrious."

He then proceeds to give many ancient customs, times for planting, signs for different kinds of weather—some notions curious enough, and mythological episodes, not necessary to give.

Respectfully, G. W. FARRAR.

THE ADVENT OF LOCUSTS.—Dr. G. B. Smith, of Baltimore, who is generally well informed on the subject, announces that the seventeen years' locusts will appear this year on the whole of the eastern and western shores of Maryland, commencing about five miles from Baltimore and extending to Carlisle Pa. They will appear also, all over Maryland, in very small numbers. They will also appear in Kanawha county, Va., and in this State about Lexington Frankfort, Georgetown and extending to Maysville and Galla[illegible] In Massachusetts and Rhode Island, and adjacent towns, he says they will likewise appear. Dr. Smith adds: They can be found in all the above places wherever trees or forests grew in 1838, by digging down one or two feet. They will be found [illegible] inside of lumps of earth of the size of the fist or larger; and when these are broken by the spade or otherwise the creatures will be exposed to the [illegible] [illegible].

CALIFORNIA CATTLE.—In the county of [illegible] J. T. B. of [illegible] at the fall a [illegible] that [illegible] 7 [illegible] y day [illegible] 7 [illegible] made a [illegible] a pa[illegible] 24 day [illegible] [illegible] J. J. [illegible] I [illegible] This [illegible]

* NOTE.—May not the primary cause of [illegible] and [illegible] be a [illegible] in the blood?

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, THURSDAY, JULY 5, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

☞ MANUFACTURERS of every branch, Nurserymen, Seedsmen, Florists, Booksellers and Publishers, and every branch of business connected with California interests, should advertise in the CALIFORNIA FARMER, if they wish to have their business known over the country.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to tho Agrieulturists of the State that as the time for holding the Annual Fair approaches the neeessity for increased and energetic action throughout the State becomes, daily, more apparent.

The offieers of the Society are *giving* their time, attention and money to the. furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUGHINSON, President.

O. C. WHEELER, Rec. Sec.

Sacramento, June 23d. 1855.

Notice.

AT a meeting of the Executive Committee of the State Agricultural Society held this day, it was resolved to extend the time for *receiving* proposals for Farms, Orchards, Vineyards, Nurseries, &c., for examination, to the 10th of July.

O. C. WHEELER, Rec. Sec.

Sacramento, June 22, 1855.

Entrees for Premiums.

To the President State Agricultural Society:

The undersigned take this opportunity to notify the Executive of the State Society that we enter for the Premiums of the present year our plantation of Onions, and also of Sweet Potatoes, and shall be pleased to see the proper committee at such time as will please them. An early day is important, as harvesting will soon begin with us. Respectfully yours, HOOKER & FERN.

Sacramento River, 4½ miles below the city.

NEW VOLUME.—With this number commences Vol. IV. of the CALIFORNIA FARMER, and it may not be amiss on this occasion to return our heartfelt thanks to those of our friends who from the commencement of its publication till this day, have so materially aided and strengthened us by their patronage, prompt payments, and words of encouragement. To all such we cannot but feel grateful. Theirs have been "golden opinions" to us. In return, we shall strive to so advocate the cause of Agriculture, urge its importance, its demands, its rights, its dignity, and advance its interests, as to retain their kind approval until the end. The FARMER will, as heretofore, contain from week to week, choice selections of poetical and prose composition, as well as agricultural, horticultural, and mechanical, making it not only an Agricultural paper, but one of the best Family journals in the country. Progress! is the watchword of the age. Progress! in all things good, is our motto. May we not hope then kind reader that you, and may be some friend of yours, will still be with us? We wish many such. Who can we add? Our books are not yet full. "Come one, come all!"

The Grasshopper—Gryllida.

BELIEVING that everything relating to the history, character and habits of this most destructive animal will be interesting to our readers, we have taken some pains to gather from writers and from old records such data as may be relied upon; and as our climate is of such a character as to be subject to these visitations, it is of great importance that we set about in earnest to provide a remedy for this great and growing evil.

The Locusts of Egypt, the Harvest Fly of France, and the Grasshopper of the United States are, if not the same insect, all alike in their character, habits, and destructive properties. Equally alike they flourish in a hot and dry climate; equally and alike avoid cold and damp latitudes, or if found there, it is for a short time, and only when driven by want of food from the latitudes in which they flourish.

That among other trials to which the cultivator of the soil in California may be subjected, the periodical visitation of this plague will be numbered, there can be no doubt. But as to every evil to which man is subject there is a remedy, so a remedy will be found for this. By a careful study of nature, by a knowledge of our seasons and our soils, the best periods of time for planting and harvesting, the time of the appearing of these insects termed plagues, we shall be enabled to eradicate many evils of which we now complain, or change the cloud to sunshine, the curse to a blessing. If those who are now engaged in cultivation will but note *facts* and improve upon them, all these evils will be removed —for has it not been said, "*I will make thee lord of the creation*"—and shall not man thus constituted, control the lower order of the animal creation, the thing created?

The floods which swept the richest lands of California and buried the fertile banks of her fairest rivers, and which have caused so much loss in past years, were but nature's plans to destroy the myriads of insects that would otherwise have scourged us in former years. The burning sun, that eats up every tender thing upon our thousand hills, ripens the grain in all our valleys, that man may be satisfied with bread. But sun and flood are both blessings when seen aright. To avoid the flood, man dams up the rivers and fences out the waters,—he cultivates the earth, rears his crops, and they are devoured by the insects that the floods would have destroyed. To avoid the sun, man flies from the beautiful mountains, and cultivates only the valleys, leaving the hills to become barren for want of that cultivation and protection which man, as the lord of creation, has the power to give. 'Tis time man should see his error, for when the sun comes burning up our hills, then comes those myriods of insects that, springing into life from the earth that once the floods covered, fly to the warm and dry atmosphere of our hills, but finding no food there they descend into our valleys and commence the work of devastation that ceases not till man's hopes are blighted.

From all these facts, may there not come lessons of more value for the future, than all the losses of the past? Were nature's laws more closely observed, were our seasons more carefully noted, our hills, even to the tops, would be covered with the early crops appropriate for the wants of man. These crops would be harvested before the return of these insects, and shielded by the foliage of trees, the power of the sun would in a measure, be made subservient to man's good, and a living green clothe the hills that now look sad and drear. And were the banks of our rivers used for those purposes and for those crops appropriate and in season, as the banks of the Nile are used, then the floods would be the greatest boon bestowed upon man. Then would mountain and hill-side, valley and river-bank, each and all be cultivated, each in their appropriate season and for for their appropriate purpose, as God and nature designed them; and man would see that plans designed by Him, are wiser than those he would change. Then would the "desert places of our land blossom with the rose," "the hills and the mountains break forth into singing," and "the people shout for joy."

With these views, we present the annexed sketches from the best historical writers of ancient and modern date—from "Goldsmith's Animated Nature;" from Dr. Harris, whose writing upon natural history, are a text book; and from many others, and also from our own personal observations. We are not able to say all we wish in this number, but shall, from time to time, continue such farther information as we obtain, and hope all who can, will aid us for the general good.

(*Gryllida.*)—Belonging to the second order of insects, we find a tribe of little animals which, though differing in size and color, strongly resemble each other in figure, appetites, nature, and transformation. But though they all appear of one family, yet man has been taught to hold in different estimation, for while some of this tribe amuse him with their chirpings, and banish solitude from the fields, others come in swarms, eat up every thing that is green, and in a single night convert the most delightful landscape into dreary waste. However, if these animals be separately considered, the devouring locust is not in the least more mischievous than the musical grasshopper; the only difference is, that one species comes for food in a swarm, the other feeds singly. That animal which is called the grasshopper with us, differs greatly from cicada of antiquity, for as our insect is active enough in hopping through the long grass—from whence it has taken its name—the cicada had not this power, but either walked or flew. The little hissing note also of our grasshopper, is very different from the song of the cicada, which was louder and far more musical. The manner in which this note is produced by the two animals, is very different, for the cicada makes it by a kind of buckler which the male has beneath its belly, the grasshopper by a a transparent membrane that covers a hole at the base of its wings. There is still a greater variety in all these with regard to the shape and color. Some are green, some black, some livid, and some variegated; but many of them do not show all their colors till they fly. Some have long legs, some short, some with more joints, others with fewer. Some sing, others are mute. Some are innocent, doing no damage to the husbandman, while others do such prodigious mischief that they are looked upon in some countries as one of the terrible scourges of the incensed Divinity.

Towards the latter end of autumn, the female prepares to deposit her burden, and her body is then seen greatly distended with her eggs, which she carries to the number of an hundred and fifty. In order to make a proper lodgment in the earth for them, nature has furnished her with an instrument, at the tail, somewhat resembling a two edged sword, which she can sheath and unsheath at pleasure. With this she pierces the earth as deep as she is able, and into the hole which her instrument has made, she deposits her eggs one after the other. In this manner, they remain deposited beneath the surface of the earth during the whole winter, till the genial return of spring begins to vivify and hatch them. The sun, with its warmth, beginning to animate all nature, the insect eggs feel its benign influence, and generally about the beginning of May, every egg produces an insect about the size of a flea. These at first, are of a whitish color; at the end of two or three days they turn black, and soon after they become of a reddish brown. They appear from the beginning, like grasshoppers wanting wings, and hop among the grass as soon as excluded, with great agility; yet still, are by no means arrived at their state of full perfection, although they bear a strong resemblance to the animal in perfect form. They want, or seem to want, the wings which they are at last seen to assume, and can only hop among the grass without being able to fly. The wings, however, are not wanting, but are concealed within four little bunches that seem to deform the sides of the animal. There they lie rolled up in a most curious manner, occupying a smaller space than one could conceive who saw them extended. Indeed, all insects, whatever transformations they seem to undergo, are yet brought forth with those very limbs, parts, and wings, which they afterwards seem to acquire. In the most helpless caterpillar there is still to be seen the rudiments of that beautiful plumage which it afterwards expands when a butterfly, and though many new parts seem unfolded to the view, the animal acquires none but such as it was from the beginning possessed of. The grasshopper, therefore, though seemingly without wings, is in reality from the first, possessed of those instruments, and only waits for sufficient force to break the bonds that hold them folded up and to give them their full expansion.

The grasshopper, that for above twenty days from its exclusion, has continued without the use of its wings, which were folded up to its body, at length prepares for its emancipation and for a life of greater liberty and pleasure. To make the proper disposition for the approaching change, it ceases from grassy food, and seeks about for a convenient place beneath some thorn or thistle that may protect it from an accidental shower. The same laborious writhings and workings, heavings, and palpitations, which we have remarked in every other insect upon an approaching change, are exhibited in this. It swells up its head and neck, and then seems to draw them in again; and thus alternately for some time, it exerts its powers to get free. At length the skin covering the head and breast is seen issuing out first from the bursting skin, the efforts still continuing, the other parts follow successively, so that the little animal, with its long feelers, legs and all, works its way from the old skin that remains fixed to the thistle or the thorn. It is indeed inconceivable how the insect can thus extricate from so exact a sheath as that which covereth every part of its body.

Such are the habits and nature of those little vocal insects that swarm in our meadows, and enliven the landscape. The larger kinds only differ from them in size, in rapidity of flight, and the powers of injuring mankind by swarming upon the productions of the earth. The quantity of grass which a few grasshoppers that sport in the fields can destroy, is trifling, but when a swarm of locust two or three miles long and several yards deep, settle upon a field, the consequences are frightful. The annals of every country are marked with devastation which such a multitude of insects produces; and though they seldom visit Europe in such dangerous swarms as formerly, yet in some of the southern kingdoms they are still formidable. Those which have at uncertain intervals visited Europe, in our memory, are supposed to have come from Africa, and the animal is called the Great Brown Locust. It was seen in several parts of England in the year 1748, and many dreadful consequences were apprehended from its appearance. This insect is about three inches long, and has two horns or feelers, an inch in length. The head and horns are of a brownish color—it is blue about the mouth, as it is also on the inside of the large legs.

The destructive insects popularly known in the United States by the name of grasshoppers, but which in our version of the bible, and in other works in the English language, are called locust, and have from a period of very high antiquity attracted the attention of mankind by their extensive and lamentable ravages. It should be remarked, observes Dr. Harris, that in America the name of locust is very improperly given to the cicada of the ancients, or the harvest fly of the English writers. The name of locust will here be restricted to certain kinds of grasshoppers; while the popularly named locust, which according to common belief appears only once in seventeen years, must drop this name and take the more correct one of cicada or harvest fly. The very frequent misapplication of names by persons unacquainted with natural history is one of the greatest obstacles to progress of science, and shows how necessary it is that things should be called by their right names, if the observations communicated respecting them are to be of any service. Every intelligent farmer is capable of becoming a good observer and of making valuable discoveries in natural history; but if he be ignorant of the proper names of the objects examined, or if he give to them names which previously have been applied by other persons to entirely different objects, he will fail to make the result of his observation intelligible and useful to the community.

The young grasshopper comes from the egg a wingless insect, and consequently unable to move from place to place, in any other way than by the use of its legs. As it grows larger it is soon obliged to cast off its skin, and after one or two moultings its body not only increases in size, but becomes proportionately longer than before, while little stump-like wings begin to make their appearance on the top of the back. After this the grasshopper continues to eat voraciously, grows larger and larger, and hops about without any aid from its short and motionless wings, repeatedly casts off its outgrown skin, appearing each time with still longer wings and more perfectly formed limbs, till at length it ceases to grow, and shedding its skin for the last time, it comes forth a perfectly formed and matured grasshopper, with the power of spreading its ample wings and of using them in flight.

In the South of France the people make a business, at certain seasons of the year of collecting locusts and their eggs, the latter being turned out of the ground in little masses, cemented and covered with a sort of gum in which they are enveloped by the insects. Rewards are offered and paid for their collection, half a franc being given for a kilogramme, (about 2 lbs. 3 1-4 oz. avoirdupois,) of the insects, and a quarter of a franc for the same weight of their eggs. At this rate 20,000 francs were paid in Marseilles, and 25,000 in Arles in the year 1613; in 1824-5, 542 francs, and in 1825, 6,200 francs were paid in Marseilles. It is stated that an active boy can collect from six to seven kilogrammes, (or from 13 lbs. 3 oz. 13. 22 dr., to 15 lbs. 7 oz. 3. 09 dr.) of eggs in one day.

The Grasshopper Plague.

THE following facts can be relied upon, having received them from such sources as leave no question of their correctness. We hope cultivators in all parts of the State, and especially where these devastators have been felt this year, will examine the coming winter and see if the same thing occurs again.

Remember! Wherever the *floods covered the soil* and remained a little time, no grasshoppers appear.

Remember! They rarely or never are found in *shaded* grounds, or *damp and wet* localities.

Remember! They are destroyed by winter plowing—*deep sub-soil plowing*. Plow deep and bring up their eggs to the action of the wintry storms, and you will lessen if not wholly destroy them. In many of the older States they have been found embedded in clay below the surface, and around the trees, thus seeking shelter—while in the dormant state and the egg—from the severity of the storm, remaining there until their time of re-appearing.

We have made many inquiries, and from those who have seen and examined their habits, we gather the following:

The grasshopper shell, or his decayed body, is found about ten or twelve inches below the surface in the sandy soil in gardens and orchards. Those who plow early and deep, find them turned up in large quantities, and also note that where the soil is plowed deep and early they do not make such ravages.

In the present condition of our country, every mind should be awake to the importance of find-

ing the best preventive for so dreadful a scourge, and every means that can be made use of to this result, should be hailed with joy and widely disseminated.

From nearly every portion of our State we hear of the destruction caused by this insect—from San Joaquin to the Tulare; along the Stanislaus, Merced, Mariposa and Tulare Valleys; at Salt Lake, and Carson and the adjacent Valleys between the Scott and Shasta rivers; at Colusi; along the Putah, through Yuba and Sacramento counties—and we presume ere this they have made their way to the lower valleys.

We would urge the importance of noting down the time of their appearance and departure, their habits, and every fact connected with them. We shall be very grateful for every item respecting them.

We learn that irrigation at night, and showering the trees and vines, have in many instances driven them away. Heavy shade and awnings serve to protect and save. Grounds that are low and damp, and such as, by constant cultivation, give forth a dew at night, this insect avoids.

Shade and moisture they avoid; a hot and dry location they select, and the hotter the day the more terrible their ravages; the hottest days they move with more rapidity.

Any one not familiar with their progress can have no conception of the immense quantities now in this vicinity. For the first three days of this week, the very air was full of them, flying over this city, resembling a dense snow storm—the myriads as they fly shining in the sun like snow flakes. So numerous are they, it is believed that were all which are floating in the air above to drop upon this city for even twenty-four hours, everything animal or vegetable would cease to exist, unless sheltered in close rooms.

Instances have occurred of animals being alarmed by the masses that light upon and bite them, and men traveling upon stages and otherwise have been much annoyed. They seem to be on the increase, and extending their ravages—large fields of wheat and oats have suffered in the vicinity of Ione and other upper valleys.

We most earnestly urge all to the frequent and free use of water, under and upon the vegetable—only let it be remembered to do this by night.

[For the California Farmer.]

Permanent Location of the California State Agricultural Society.

Messrs. Editors: You *may* be aware that the recent effort to establish rooms, a museum, a library, head-quarters, a *home*, for the State Agricultural Society, has created a fear that a design exists to "monopolise the whole thing, with its successive annual fairs, for Sacramento."

Now, as one with whom the idea originated, and who has labored second to none in its realization thus far, I wish most distinctly to disavow any such intention or wish. Nothing could be further from the desires of the present management of the Society. I hesitate not to say that, there is not a single cultivator of the soil, or friend of Agriculture in this valley, who would consent to such a thing. Every intelligent culturist knows that the annual fairs of such a society must be held successively in different sections of the State, or the great objects of its organization can never be obtained. Every part of the State must have, in its turn, its respective share of the attentions and favors resulting from the operations of the Society. I could scarcely conceive of a greater calamity, a more certain ruin to the interests of the cause we wish to promote, than the fixing of our Annual Fairs at one and the same place. Such a thing never should—never can, be done.

The simple object of what has been done here, is, to have for the Society a home, a place, where friends of science from all parts of the State, aye, of the world, may carry or send their contributions to the vegetable, mineral, animal, or literary department of our Society's permanent Museum. Every such contributor has his name registered in a book kept for the purpose, so that, in after years, our cabinet, our conservatory, and our library, will each show to whose munificence it is indebted for each of its component parts.

Trusting that the above is sufficient to entirely remove the unhappy impression which has been made, I will merely add that we sincerely hope that the friends in various parts of the State, will compete, with great spirit, for the next year's Fair, and will assure them in advance, that at the coming Fair, Sacramento intends to come so near having "glory enough for one day," that she will not enter the list of competitors for the next one.

Yours, very truly, O. C. Wheeler.
Rec. Sec'y Cal. State Ag. Soc.

Sacramento, June 8d, 1855.

The State Fair—Sacramento City.

The communication which appears in our issue of this week, from Rev. O. C. Wheeler, Recording Secretary of the State Society, relative to the coming Fair, should be read by every cultivator and citizen in California. The annual exhibition of the products of our State, the specimens of our manufacturers, the skill of our mechanics and our artisans, are matters of public interest, and these exhibitions should elicit a public feeling; and we are glad there is a little jealousy of Sacramento. For while we cheerfully join with the Secretary and say "so mote it be" to every word he has said, we know if citizens of other portions of our State are beginning to be jealous of Sacramento, it is a sure sign they *love the cause* for which they are jealous.

We can heartily attest to the truth of the sentiments uttered in that letter, for we know that although the State Society's Rooms are located at the capital, which all admit to be the best place, every friend of agriculture and its kindred interests desires to have the Annual Fair changed every season. We would not have it at all were it not so. San Jose, Santa Clara, Benicia, Yuba, Sonoma, Napa and Monterey, or any county that will make provisions for it and take an interest in sustaining it, are entitled to its benefits, and at each place these Fairs should be held in their turn. That city or county, however, which comes forward at the annual meeting, each October, and give the best assurance of an interest to sustain the Shows, should have preference in the order. This plan is adopted in the other States.

It is hoped and expected that the city of Sacramento, seeing the benefits which must arise from an exhibition of such importance as the coming Fair, will with her accustomed public spirit prepare for it. We repeat—much as we glory in the prosperity of our State and of the city of Sacramento, we shall do all in our power to see that every section of the State that is proper shall have the benefits arising from the Annual Fair.

Sacramento is indeed a proud city, and well may her citizens be proud of her, for her citizens are *citizens*. They belong to, and are a portion of the city. In the sketches we are preparing, we find the *cause of her success* lies in the fact that a large portion of her population is of those who have been with her through fire and flood, through good report and through evil report, and through adversity to the present high state of prosperity; and it is a fact known and admitted that while the citizens of Sacramento have suffered more than any other city by fire and flood, and heavy taxations to build up the city of their adoption, there is no city in the State whose public and private credit stands higher, or whose prospects are so fair. And this results altogether from the facts recorded, that her people, the long tried, old residents of '49 and '50, are the people that are with her still. Firmly they have braved everything, fighting manfully for their "homes." The merchants of Sacramento of '49 and '50 are the merchants of '55—and none stand higher in our State—they claimed Sacramento as their homes then, they hail it as their homes now, and hence their prosperity. While other cities have had changeable populations, the Sacramentans have remained steady, firm and true to their city. Our sketches of business houses, in our next number will prove this.

Received at the Society's Rooms.

Since our last issue there have been sent to the Society's rooms many specimens of Fruits, Flowers, &c. Among them we note as follows:

From O. H. Myers, Alameda, a basket of "British Queen Strawberries;" a box, with branches bearing fruit of the "Siberian Crab Apple;" currants and almonds; also two young apple trees in fruit, with sample fruits of Early Bough, Early Harvest, Early June, Red Astracan, &c. All these specimens indicate the early fruiting habits of trees in California. The specimens were all good and it was gratifying to note the interest of nurserymen in thus sending to the rooms of the Society their several specimens.

Samples of the Figs from the "Woolfskill Ranch" were sent, and they were very superior, (noticed elsewhere.)

A fine Bouquet of assorted floral gems and a large collection of the different varieties of the Althea (Hollyhock), some very handsome and double, were sent by Dr. B. B. Brown.

A dish of the remainder of the "Great Feast of the Grasshoppers," from Smith's Gardens,—being the *peach pits* showing the epicurean taste as well as the good teeth of these wandering pirates.

From Mrs. Boston, of Monterey a most beautiful Wreath, made from Sea Mosses, and arranged with exquisite taste.

Boston Department—New Books.

"Woman in the Nineteenth Century," is the title of a volume of miscellanies from the pen of Margaret Fuller Ossoli, and just published in beautiful form by J. P. Jewett & Co., Boston. It is edited by her brother, Arthur B. Fuller, with an introduction by Horace Greely. Few biographies, have made an impression greater than that published in 1852, styled the "Memoirs of Margaret Fuller." This volume contains besides her "Woman in the Nineteenth Century," which has been published, several other papers which have appeared in the Tribune, in times past, and some which have never before been published. Some private letters and papers are inserted in this volume, which are very interesting, and are illustrative of her deep feeling in the various relations of life. Those who knew Margaret Fuller, feel that no pen can describe the eloquence of her lips, and her intellectual gifts and heroism of character are too widely known to bear comment. This volume is now before the world and it behooves each and all to peruse a work so deeply interesting.

"The Missing Bride," by Mrs. Emma Southworth, which has been announced in press, has just been issued by T. B. Peterson, of Philadelphia. This is the last work written by Mrs. Southworth, and has been pronounced superior to all ever before published from her pen. She is is a lady of great literary talent, genius, and originality, and each new work adds new laurels to her fame. This work is finely written, and each character fully portrayed. Her scenes are life pictures, and each incident founded on facts. There is a chasteness and purity in all she writes which acts with a peculiar charm. Her works are among the most celebrated of the day, and enjoy an immense sale in America and even in Europe. She is acknowledged to be the best American writer of the age. Mrs. Southworth's name is a host in itself.

The "Watchman," is just published by H. Long & Brother, New York, having been announced in press, for some months past. Not having perused it, we shall notice it in our next, at length. It is destined to be a companion to the "Lamplighter," and will have an extensive sale.

Woolfskill Brothers.—These brothers have four ranches. They are among our earliest pioneers in farming stock raising and orcharding. One large orchard and vineyard is situated at Los Angeles, under the care of Wm. Woulfskill, Esq., and one other brother. Another large ranch and fruit garden is on the Putah, under the care of John Woolfskill, Esq. One belonging to the brother Nutton, and one to Matthew. All cultivate fruit largely, and they are practical cultivators, as the fruits in our markets will testify. The orchards of these brothers average about forty acres each, and consist of grapes, pears, peaches, figs, apricots and apples. Some few other fruits and vegetables are grown; but principally marketable fruits. If constant personal care and labor will bring success, then these brothers will deservedly secure it. Our State owes them much for what they have done. Quantities of apricots have been in our markets from these ranches; and now the luscious fig; soon the peach and pear; and next the grape. Although their gardens on the Putah—principally that of J. Woolfskill—have suffered to the amount of seven or ten thousand dollars, yet they will send a fine lot of fruits to market yet.

Independence Day.—The bells ring forth their joyous peal, the cannons pour forth their thunders. The shouts of men, the joyous tones of women, and the merry sports of children, tell that this day can never cease to be remembered while human blood circulates through the heart of an American citizen. How truthfully did the Elder Adams prophesy of what this day should be. There is no day equal to it, no day that should have preference to it, save the "Holy Sabbath day;" and the day should be kept, aye, will be kept as the Sabbath Day of American Patriots. They labored for American Independence; they achieved it and rested from their labors. Their works survive them and to-day we hallow their memories. Let Americans remember the holy trust confided to them, and keep the liberty they have received.

Splendid Purple Figs.—A basket of luscious figs, "*Los Angeles Purple*," were presented to us last Monday, by Milton Woolfskill, Esq., from his ranch on Putah Creek. These figs are as fine as any we have seen in the country. Mr. W. brought to market sixty pounds of the same. Such fruit is now particularly refreshing, and is healthful in hot weather. Figs, oranges, and grapes are most palatable, and will be best enjoyed at the breakfast. Mr. W. has our thanks for the delicious treat we received.

Favors Received.—From C. L. Flint, Esq., Secretary of the Massachusetts Board of Agriculture, full reports of the doings of that body the last year; a valuable document.—From Gov. McDougal. "Herndon's Valley of the Amazon," a work of acknowledged interest.—From the Royal Hawaiian Agricultural Society, Sandwich Islands, for a published report of the transactions at its fourth annual meeting; a pamphlet of 173 pages, neatly executed, and containing many interesting facts, hints, and suggestions upon the subject of agriculture; as a whole, it is certainly highly creditable to the enterprise and ability of our agricultural friends at the Islands, and the liberal and judicious policy of the Government.—From from our kind friends of Messrs. Wells, Fargo, & Co., and of the Pacific Express, for prompt delivery of letters, papers, &c.—For each and all of which favors, we return our thanks.

Puget Sound Courier.—Number one of this journal has just come to us and we are most happy to welcome its advent; sincerely do we hope it will have a prosperous course. This journal is of good size, neatly printed on clear type, and the selections are of excellent character. We notice with much pleasure its aim seems to be particularly directed to fostering and encouraging Home Industry, Agriculture, and the Mechanic Arts. This is what is needed. The salutatory of Messrs. Afflick and Gunn, editors and proprietors, gives assurance of a determination to succeed in well doing, and in this we commend them, with our most earnest wishes for their success. We shall look for the Puget Sound Courier with interest.

A New Remedy against Grasshoppers. Agricola, for reasons which he will state next week, recommends that diluted sulphuric acid applied to the leaves of plants, be tried experimentally, as a remedy against grasshoppers. He says that Professor Johnston recommends it as a manure, in the proportion of two gallons of sulphuric acid to three or four hundred gallons of water, per acre. But he suggests to dilute it with at least three times that quantity of water, and to use it for several successive evenings—say three or four hundred gallons per acre each evening; or two gallons per square rod. By doing so he believes that no awnings will be required.

Beautiful.—A very beautiful wreath of Sea Mosses, collected and prepared by Mrs. Boston, of Monterey, was presented to the Society's Rooms on Monday last, by Mr. Gardiner, of the firm of Gardiner & Kirk, booksellers, of this city. The wreath is worthy of note and a visit to the rooms, reflecting high credit for a taste for the beautiful. We are much pleased to see our friend Gardiner return so much improved in health after his recent accident.

The Mammoth Ox.—This noble animal has changed ownership, but is still on exhibition. The present proprietor intends to give him a resting spell soon, preparatory to the State Fair. A few weeks rest adding a *little more fat*, will make him a fine show animal. Those who have not seen him should surely go to Commercial street and see him.

Extraordinary Well.—In an interesting letter to the New York Courier and Enquirer, Mr. F. Meriam, the meterologist, states that there is in Lockport, N. Y., an artesian well four hundred feet in depth, from the bottom of which rises a vein of salt water, holding in combination a large per centage of diliquescing chlorides, which mingling with waters of other veins, produce instantaneous chrystalizations of beautiful selenite, in flattened eight sided prisms of about an inch in width, and a sixteenth of an inch in thickness. The laminæ of these are so perfect that a single crystal may be divided by means of heat, into two dozen distinct sheets. This well is peculiar in more respects than one. It is accustomed to spout salt water for but a few moments at a time, and then subsiding, remains quiet for the space of an hour, at the conclusion of which it again begins to puff and roar and shot forth in its usual jets. When the workmen were sinking this well, the auger upon attaining a depth of two hundred and thirty-five feet, fell suddenly about fourteen feet, and reached the bottom of a subterranean river, flowing with so strong a current as to prevent a perceptible motion in the upper part of the stem of the auger.

Horticultural Department.

Study of Flowers.

It is very common with men who think there is nothing rational that is not connected with dollars and cents, to ridicule the study of flowers. "What good can come out of it," they ask. "Will it improve a man's fortune, or advance his interest? Will it render him a shrewder calculator? Will it earn him his bread or make him a fortune?"

They are greatly mistaken who believe that no actual utility, in the common niggardly sense of the term, can be derived from the pursuits of taste. But granting that they will accomplish none of these useful purposes, we would encourage such studies, as tending to fill up many hours of idleness with an interesting and agreeable employment. Every new amusement which can be participated in without danger to the health or the morals, provides an additional means for the moral improvement of society, inasmuch as it serves to divert many minds from pleasures which are liable to be accompanied with vice. Though to a mere plodder in the common business of life it may seem almost ridiculous to be engaged with enthusiasm in naming and preserving a few insignificant wild flowers, yet this very zeal may preserve many a youth from corruption and ruin, whose passions might otherwise lead him to seek the haunts of vice. There are many pursuits which are useful in no other way than by contributing to our pleasures. Let plodding misers and conceited sensualists, ridicule them, because they neither fill one's coffers, nor spread his board—they forget that one distinguishing mark between men and brutes, is, that the latter pursues only the *useful*, while the former are about equally employed in the pursuit of the *fanciful*.—*Ib.*

Who are the Benefactors of Mankind?

Dean Swift, once remarked, that any one who should cause a blade of grass to grow where nothing grew before, was a benefactor to mankind. The object of the author of this remark, was to state in forcible terms, his opinion of the public benefit derived from all agricultural improvements. This saying was figurative: but it might be literally avered that every man who plants a tree is a public benefactor, whether the value of the tree consists in its fruit, or its flowers, its timber, or even its shade; for, with regard to trees, it may be said that we often seek the substance for the sake of the shadow. We are acquainted with a single lady who makes the rational boast, that she has always planted a fruit tree in every place in which she has resided. Whenever she takes lodgings in any new house, if there be a garden attached to it, she plants a fruit tree upon the spot. Such acts, upon her part, seem to be disinterested, as her habit of moving from place to place, must prevent her from being the continual proprietor of these trees. Some one is benefited by them, and she enjoys the satisfaction of having done some good in the world. In these acts, she displays a true benevolence.

We know a gentleman who lived to see the folly of a different course of conduct. On moving his young family into a house which was connected a large garden, he was advised to plant it with fruit trees. He rejected the advice, and not owning the place, replied that he should plant no trees for other people's benefit. He lived there about thirty years; and during this space of time he might have raised an abundance of fruit for his own family, and have seen many of the trees of his own planting, perish of old age. There is perhaps no species of selfishness so foolish as that which prevents one from planting trees; since their cost is but a trifle, and the labor of attending to a few individuals is both wholesome and agreeable. And in this country, where property is so constantly changing hands, we can never predict when we plant another man's grounds, that these grounds may not become our own or those of our children.—*Mass. Magazine of Horticulture.*

Camellia Culture at Kazan.—A letter from Bouterloff, Adjunct Professor of the Imperial University of Kazan. (Kazan is on the river Kazanka about four miles above its fall into the river Wolga, in lat. 55 deg. 47 min. 26 sec. north, long. 40 deg. 21 min. 9 sec. east.)

I send you some information as to our method of cultivating the camellia.

The composts which we use differ from those used by your Mon. Leguay—we have none of his heath soil, and we replace it by soil formed of pine leaves, well mixed with sand. My experience proves that the camellia roots well and promptly in a compost soil made of earth of leaves—muck and sand—night soil in solution is added.

Camellias cannot be transferred to new pots successfully, except immediately after the flowering is over, and before the spring growth begins, or towards the middle of summer, when the sap is stationary.

We cultivate several varieties of the camellia here, and others of the temperate latitudes. They give us well developed flowers, but we never prune them as we should do. I regard it as a necessity, for this charming tree. I regret that Mr. Leguay has not yet gone into the practice of budding the camellia, and other methods of multiplying a plant so interesting to amateurs.—*Revue Horticole, Paris.*

A patent has been granted by the French Government for making sugar from pumpkins. It is said the quantity produced will be at least as great as obtained from any equal weight of red root.

State Patronage of Agriculture.

The following action of the Maine Legislature is commendable. It exerts a double influence, medifying the character and arrangement of the courses of lectures on chemistry and vegetable physiology, thereby securing more attention to these departments, for the benefit of all the students, while the liberal endowment, conditionally offered, provides for the instruction of an entire class of young men, (and old ones, too, if they will,) thus far without valuable facilities of improvement in these hitherto neglected sciences.

The third section, however, is entirely too general. The obligation to analyze all soils, manures, plants and seeds, sent by any farmer of the State, might require the constant employment of a dozen experienced chemists. Had it been confined to the "Board of Agriculture," who may be supposed to be reasonable men, no special danger of that sort, might be apprehended.

An Act to endow the Chemical Professorships of Bowdoin and Waterville Colleges, on certain conditions.

Be it enacted by the Senate and House of Representatives in Legislature assembled, as follows:

Section 1. The State Treasurer is hereby authorized and directed to transfer the sum of thirty thousand dollars, in six per cent. State Stock, to the Board of Trustees of Bowdoin College, and the like sum of thirty thousand dollars, in six per cent. State Stock, to the Board of Trustees of Waterville College, to be held in trust by them respectively, as endowments of the Chemical Professorships in these Colleges, of which they are Trustees, whenever said Board of Trustees shall severally certify to the State Treasurer, through their Secretaries, under oath, that they have enlarged the duties and means of instruction under said professorships, so as to embrace Agricultural Chemistry and Vegetable Physiology; and that they will comply with the requisitions hereinafter specified.

Sec. 2. It shall be the duty of said Board of Trustees, to cause instruction to be given without fee, to all persons, inhabitants of this State, not undergraduates in a regular college course of instruction, who may resort to said institutions as students under the Professorships of Chemistry only; they having the same privileges of the several libraries and on the same terms, and being subject to the same college laws, rules and regulations as other students, so far as they may be applicable to their position in said institutions; and such students may attend, without charge, all the lectures in said colleges, under such restrictions as may be imposed by said Boards of Trustees, and sanctioned by the Board of Agriculture.

Sec. 3. It shall be the duty of the Professors of Chemistry in each of these colleges, to analyze or cause to be analyzed, as speedily as may be, all soils, manures, plants and seeds sent to said colleges for this purpose, by the farmers of this State or the Board of Agriculture, without charge to the applicant, and report the result to him, with such suggestions as he may deem necessary in the premises; and annually, on or before the first Wednesday in January, report to the Secretary of the Board of Agriculture a full statement of his doings, with such other matter as he may deem suitable.

Sec. 4. A committee of three from the Board of Agriculture, elected at its annual meeting, shall constitute an examining committee, to visit, from time to time, the Chemical departments of said Colleges, to witness their instructions and doings, with special reference to the interests of Agricultural Science; and annually, on or before the first Wednesday in January, report to the Secretary of the Board of Agriculture a statement, so far as they are able, of the doings, conditions and prospects of these departments.

Moisture in Soils.

It is known that soils which contain much *humus* or decayed vegetable matter, have great power in drawing moisture from the air. It might be supposed, therefore, that an application of peat—which contains much humus—would prove beneficial in a dry season on sandy soils. Has such been the case? Clay, too, possesses this power to a great extent, but it should be well pulverized in order to allow the air to permeate through it. Pure sand does not possess the power at all; and yet sandy soils which contain a little clay or humus, often suffer less from drouth than tenaceous clays, owing doubtless to their permeability. Sir Humphrey Davy, says: "The soils which are most efficient in supplying the plant with water, by atmospheric absorption, are those in which there is a due mixture of sand, finely divided clay, and carbonate of lime, with some animal or vegetable matter; and which are so loose and light as to be freely permeable to the atmosphere. With respect to this quality, carbonate of lime and animal and vegetable matter, are of great use in soils; they give absorbent power to the soil without giving it tenacity. Sand, on the contrary, which also destroys tenacity, gives little absorbent power. I have compared the absorbent power of many soils with respect to atmospheric moisture, *and I have always found it greatest in the most fertile soils;* so that it affords one method of judging of the productiveness of land." There is a rich field open for investigation in this direction.

The quantity of water required to thoroughly saturate the various earths, is a question of much importance. Schubler found that a cubic foot, when thoroughly saturated, contained of water as follows:—Silicious sand, 27.3 lbs.; gypsum powder, 27.4; calcareous sand, 31.8; carbonate of lime, 47.5; fine slaty marl, 35.6; pure grey clay, 48.3; stiff clay or brick earth, 45.4; garden mould, 48.4. The fact that "garden mould" imbibed more water than any other soil, and the poor "silicious sand" the least, indicates that rich soils are less easily saturated than sterile ones. Here, too, is a fine field for study.

The power of retaining water when exposed to the atmosphere, is also known to differ materially in the several earths. Schubler found, calculating the evaporation, as from 100 grains of water contained in the earth, that 200 grains of earth, spread on a surface of ten square inches, at a temperature of 65.3.4.0, evaporated in 4 hours as follows: silicious sand, 88.4 grains; calcareous sand, 75.9; gypsum powder, 71.7; sandy clay, 52; loamy clay, 45.7; stiff clay or brick earth, 34.9; pure grey clay, 31.9; fine lime, 28; garden mould, 24.3; magnesia, 10.8.—*Rural New Yorker.*

Miscellany.

SCATTER YE SEEDS.

Scatter ye seeds, and flowers will spring;
Strew them at broadcast o'er hill and glen;
Sow in your garden, and time will bring
Bright flowers, with seeds to scatter again.

Scatter ye seeds—nor think them lost;
Though they fall amid leaves and are buried in earth;
Spring will awake them, though heedlessly tossed,
And to beautiful flowers those seeds will give birth.

Scatter ye seeds; tire not, but toil;
'Tis the work of life, 'tis the labor of man;
In the head, in the heart, and an earth's own soil,
Sow, gather and saw, through life's open span.

Scatter ye seeds in the field of mind—
Seeds of flowers, with seeds of grain;
In the spring and summer, sweet garlands ye'll find,
And in autumn ye'll reap rich fruits for your pain.

Scatter ye seeds in the garden of heart,
Seeds of affection, of truth, and of love;
Cultivate carefully each hidden part,
And thy flowers will be seen by angels above.

Scatter ye seeds—the seeds of Hope;
Plant in your bosom the Tree of Life—
Then the flowers here budding in Heaven shall ope,
And in Heaven will ripen the fruits of strife.

Then scatter ye seeds each passing year;
Sow amid winds and storms of rain—
Hope give thee courage, Faith cast out fear,
God will requite thee with infinite gain.

The Paris Morgue.

Every one has heard of the Morgue, the place to which the bodies of unknown persons found dead are brought for recognition. I often pass it on my way to the Hotel Dieu, near which it is, and scarcely ever without seeing some corpse stretched there in the grim ghastliness of violent death, and surrounded by crowds of eager and curious observers. It is a small building, containing a room with glazed doors, through which are visible half a dozen platforms for the reception of bodies. The rows nearest the wall have each a fasset to let cold water trickle over the corpse and keep it longer from decomposition. Some of the persons brought there are the victims of suicide, others of murder, and in the case of the latter, the object of the display is to obtain a clue to the criminal. A curious instance of the care and perseverance with which the police will track the murderer, has recently transpired. A man who was found dead in the streets with marks of violence upon him, lay at the Morgue a week without recognition. A physician, in the presence of two judicial functionaries, then made the autopsy, and ascertained the cause of his death. Before burying the body, and with a view to further inquiries, a wax cast was taken of the head, and furnished with the identical hair of the murdered man; this, with a few slight clues, has at last enabled the police to lay hands on the probable murderer.

All around the walls are hung various articles of clothing taken from the bodies. Among the rest is a very genteel mantilla, obtained under these circumstances: a young girl, handsomely dressed, was noticed one morning running rapidly across one of the bridges. On reaching the middle, she suddenly stopped, stood for a moment, as if deliberating, and then plunged into the river. The swift current soon bore her out of sight, and all that was recovered was the mantilla, which accidentally became detached. It was probably Hood's touching story over again—deception, shame, and disgust, closed, as I charitably believe, in all cases of suicide, with insanity. It is far from strange that in a city of a million of inhabitants, especially so impulsive both by nature and education, there should be so many suicides. I think the theatres, with their false coloring of life, the Casinos, the balls, and the meretricious novels that flood France, have much to answer for in this regard. The veriest trifle seems enough to overthrow the balance in these airy people. A boy of fifteen hung himself for fear of a whipping; a couple of lovers suffocated themselves with a basin of charcoal, because obstacles were interposed to their union. In America, the boy would have said, "it will be all the same to-morrow;" and the amorous pair would have applied to some obliging parson—would have pushed out into the world with stout hearts and strong arms, and worked their own way, unaided, towards competence and station.—*Paris Correspondent of the Newark Advertiser.*

The Moon.—It has been discovered by calculation, and demonstrated by a geometrical fact, the moon's centre of form is eight miles nearer to us than her centre of gravity, through which, of course, her axis of revolution must pass; or, in other words, this side of the moon is sixteen miles higher than the other. We announce this discovery on the authority of the most eminent mathematicians and astronomers in the world. It will soon be formally declared in a scientific quarter.

Personal Experiences.

A lady writer in the Albany Country Gentleman, over the signature of "L," gives the following amusing narration of her experience among the Shanghais, and their kindred:

"It is now about four years since, when, in a most exquisite state of verdency, and blissful ignorance of it, in all its practical details, we commenced farming. Some of our early experience was very amusing, and by your leave Mr. Editor, I will detail some of it.

"It was with considerable pleasure I contemplated the idea of living in the country, and the new pursuits that would open before me. The poultry department, I assumed as my charge. What a beautiful and lady-like employment, the care of chickens seemed to me, What an abundant outlet it would afford for all my spare sympathies and superfluous affections. What a grateful relief to the tedium of my leisure hours. How I meant to make them love me, and how they should thrive under my care. But I had not reckoned on the numerous causalities and diseases which chicken-kind are heir to. I soon found that the pip and the gape were among the sure and not very poetical necessities of their babyhood. The first year I met with but little success; the hens would not lay; the eggs would not hatch; the chickens would not thrive. I watched over them with all the solicitude of a maternal hen. I set the eggs by the moon, and dieted the chickens on assafœtida and onions; but it was to no purpose. However, time and experience have brought me wisdom, and I now think that I am competent to take the degree of M. D. in all matters pertaining to fowls, and equal to the most complicated case of hen sickness.

"Shortly after we moved to our present residence, I was very much pleased by the promise of a pair of Shanghai fowls. Now of the personal appearance of Shanghais, I was in complete ignorance. I had read of the large prices which they commanded, and had heard the magnificent crow of a neighboring cock, but further than this, I knew nothing. The day that I expected them to arrive, I was in a high state of excitement. Before the waggon was in sight that carried them, clear and shrill as a burst of martial music, rose on the air as a most sonorous crow. What a noble fellow he must be, I thought—what a grace and ornament to the poultry yard! The shock that my sensibilities received, when that unique production was placed before them, was tremendous. The hen was decent and matronly looking, but to the cock, I can't do justice. The family made a great deal of sport of them, but I said not a word. But when the peculiar idiosyncrasy of the matchless pair developed itself, how shall I paint the depths of my shame and mortification. Nests were an institution in the social economy of fowls, which the hen ignored and repudiated altogether; they were a sort of nonsense which she did not patronize at all, but she would persist in sitting upon the roost and dropping down her eggs with a most frantic disregard of all precedents. This little eccentricity of hers, of course was not indulged in without inflicting some injury to the eggs. As for the rooster, he was good for nothing, but to crow, and made himself a perfect nuisance. He would march into the kitchen with all the gravity of a judge, and without any apparent effort, reach a piece of bread off the table, and then with the same imperturbable serenity march out again with his prize.

"The subject is a perfect inspiration to me: I could dilate endlessly on the theme; but out of regard for your patience, I forbear."

Artificial Production of Fish.—In the last setting of the *Societe Zoologique d' Acclimation*, M. Millet, who is well known for his efforts in the artificial production of fish, detailed a series of experiments he had made in conveying fecundated eggs. The result was he said, that when eggs were wrapped up in wet cloths and placed in boxes with moss to prevent them from becoming dry and being jolted, may be safely conveyed not only during twenty or thirty, but for even more than sixty days either by the railway or diligence. He added that he had now in his possession eggs about to be hatched, which had been brought from the most distant parts of Scotland and Germany, and even from America. M. Millet then stated a fact which was much more curious—namely, fecundated eggs of different descriptions of salmon and trout, do not perish even when the cloths and moss in which they are wrapped, become frozen. He had even been able, he said, to observe, by means of a microscope, that a fish just issuing from the egg and of which the heart was seen to beat, was not inconvenienced by being completely frozen up. This he explained by the fact that the animal heat of the fish even in the embryo state, is sufficient to preserve around it a certain quantity of moisture.

Remarkable Prophecy.—The following remarkable prediction was made by Friar Bacon, who was born in the year 1214, some six hundred and forty years ago:

"Bridges unsupported by arches will be made to span the foaming current. Men shall descend to the bottom of the ocean, safely breathing, treading with a firm step on the golden sands, never brightened by the light of day. Call by the secret powers of Sol and Luna into action, and behold a single steersman sitting at the helm guiding the vessel which divides the waves with greater rapidity than if she had been filled with a crew of mariners toiling at the oars; and the loaded chariot, no longer encumbered by the panting steeds, shall dart on its course with resistless force and rapidity. Let the simple elements do thy labor; bind the eternal elements and yoke them to the same plow."

Selfish Matthew.

THERE are a great many good children; yet ouce in a while wo meet those who, we are sorry to say, do not belong to the class of those we love. Such a boy was Matthew.

You would not have given a fig to play with him. He had carpenters' tools, and books, and checkers, and chess, and drawing materials, and balls, and kites, and ships, and skates, and snow-shovels, and sleds—oh, I could not tell you all he had.

Well, if you went on a Saturday afternoon to play with him, he would watch all these things as closely as a cat would a mouse; and if you were within reach of them, he would sing out—"D-o-n-t; t-h-a-t's m-i-n-e."

Of course, it was not much fun to go and see him. You had to play every thing he wanted, or he would pout and say he would not play at all.

Then Matthew was such a baby! I love a *brave* boy. He would go screaming to his mother if he got a scratch, as if a wild tiger were after him; and if you said any thing to him about it, he would pout and stick out his lips.

It was like drawing teeth, to get him to go across the room to hand you a newspaper. He ought to have had a little world all to himself, he was so selfish.

When his mother was told of his faults, she would say, "Oh, he will outgrow them by-and-by."

I knew that his selfishness would grow as fast as he did; and that when he came to be a man, he would be unfeeling to the poor, and make hard bargains with them, and wring the last penny out of their threadbare pockets.

Oh, dear children, be generous. If you have but half an apple, give somebody a bite of it. Perhaps some child will say, "But I have not any thing to give." That is a mistake; that boy or girl is not living who has nothing to give. Give your sympathy; give pleasant words and beaming smiles, to the sad and weary-hearted.

If a child goes to your school who is poorly clad, patched, darned, nay, even ragged; if the tears start to his eyes when your schoolmates laugh, and shun, and refuse to play with him, just go right up and put your arms around his neck, and ask him to play with you. Love him; for love sometimes is meat, and drink, and clothing. You can love all the sad and sorrowful. Then never say, that you "have nothing to give."

Mourning of the Plants.

WHY quivers the aspen when not a breath disturbs the summer heat? Whilst other trees are enjoying repose, and affording the blessings of shade, it alone knows no rest!

Pride was its bane!

At that dread hour when our Redeemer suffered, the sun hid its light, and all nature quailed.

The wild beasts of the forest, cowered in their dens; not a bird twittered; not an insect buzzed or chirped; the voice of the breeze was hushed in the sultry air, and men awaited in alarm the great event.

The trees, shrubs and flowers felt the awfulness of that hour, and sympathized with each other upon it in their own mysterious language.

The lofty cedar of Lebanon (*Pinus Cedrus*) rustled forth a melancholy sound, and clothed its branches in deeper green, in sign of mourning.

"Alas! all is now over!" gently murmured the *Salix Babylonica*, and swept the Euphrates with its mourning branches.

The vine dresser in his vineyard, saw that the vine wept; hence, when its fruit was gathered, he called the produce *Luchramæ Christi*.

A balmy fragrance arose on the Golgotha; the *Hesperis Tristis* (sweet-smelling night-stock) offered it up, to refresh the suffering Son of man.

The *Iris Susiana* said to the cypress, "from this day will I attire myself in a garb of mourning." "And I," replied the cypress, "will henceforth take up my abode among the tombs, in memory of this hour."

A form flitted through the gloom—it was *Astaroth*, the angel of death, on his way to the cross; and when a voice was heard to exclaim—"My God, my God, why hast Thou forsaken me?" every branch, leaf and flower trembled.

The *Populus* alone, a tall, proud tree, stood unmoved on the Golgotha.

"What are thy sufferings to us?" it cried, "we plants need no atonement; we are not fallen!"

But the angel of death who heard this boast, breathed upon the haughty tree, and the unfortunate *Populus* was struck as with a palsy.

Its leaves drooped; never from that moment have its branches found rest; and it is called the *Populus Tremulosa*, or the aspen, to this day.

REV. ALBERT BARNES, says, it is the bubbling spring that flows gently, the little rivulet that glides through the meadows, and which runs a long day and night, by the farm-house, that is useful, rather than the swelling flood, or the warring cataract. Niagara excites our wonder, and we stand amazed at the power and greatness of God, as he 'pours it from the hollow of his hand.' But one Niagara is enough for the continent, or world, while the same world requires thousands and tens of thousands of silver fountains and gently flowing rivulets, that water every farm and meadow, and every garden; and that shall flow on every day and night, with their gentle, quiet beauty. So with the acts of our lives. It is not by great deeds, like those of the martyrs, that good is to be done; it is by the daily, quiet virtues of life—the christian temper, the meek forbearance, the spirit of forgiveness, in the husband, the wife, the father, the brother, the sister the friend, and the neighbor—that good is to be done.

OFFSPRING OF BLOOD RELATIONS.—The following circular appears in the March number of the Western Journal of Medicine and Surgery, with a request by the editors that it be copied into the other Medical Journals of the country. The subject is a most important one—it has been frequently alluded to in the pages of this journal—and we cheerfully give place to Dr. Bartlett's circular, which we hope will receive the attention it deserves.—*Boston Med. and Surg. Journal.*

CIRCULAR.—My attention has recently been directed to the defects in the offspring of parents related by consanguinity. So frequent and serious have the ill results of the intermarriage of blood-relations been found, that I deem it philanthropic to prepare a report on the subject, with a view to leading to legislative action on the subject. That my report may be as full and satisfactory as possible, I have to beg of physicians or others the favor of sending me histories of such cases as may have fallen under their observation.

The following questions, I believe, cover every point of interest in each case. To prevent confusion, the names of the parties, or their initials, should be given, though, of course, these will be suppressed in the report:

How many instances of intermarriage among blood-relations have you known?

In how many of these were the offspring perfect?

What was the state of health of each parent? Had the mother borne children previously? If so, were the first children of her relative inferior to the latter ones?

Did the parents resemble one another? that is, had they the same peculiarity of form, manner, mode of thought, (complexion,) &c.?

Have the parents, in any case, been the offspring of blood-relations?

How many children followed the union? How many of them were idiotic, epileptic, rachitic, or deaf? If none were so, what is the absolute and relative cleverness (intelligence) of each?

In cases where the offspring have grown up, is there any tendency to insanity, epilepsy, or any similar disorder?

Has the mother of imperfect offspring married again? If so, what is the character of the children by this union?

JOHN BARTLETT, M. D.

Louisville, Ky., March 10, 1855.

HOW TO TRAP GOPHERS.—Thomas Siveter, in a communication to the Genesee Farmer, gives the following method of trapping the gopher. He says: Where gophers are at work and the hills recent, say made the previous night, open the hill and expose the burrow about a foot in length and wide enough to let in a common steel rat trap; clean out the dirt nicely, and excavate a space at the bottom of the burrow deep enough to receive the trap, already finely set, so that the jaws and treadle will be slightly below the plane of the bottom of the burrow; cover the trap very lightly with finely pulverized earth, so that the top of the earth over the trap and the bottom of the burrow be on the same plane; cover the hole with a board, broad and long enough to prevent any other dirt from falling on the trap; haul fine dirt all around the edge of the board to exclude all light. Teach the boys how to do it right, and give them a dime for each gopher caught. I speak from experience, and this is the best way I know of. Other ways are, open the hole by the side of the hill, when the gopher will shortly bring dirt to stop it up—shoot him. When the earth is full of water, they occupy chambers in their mounds—dig them out. Sink a jar glazed inside, one foot deep in the bottom of the burrow, in lieu of a steel trap; cover its mouth with a cabbage leaf or its equivalent, and finish as directed for steel trap. They will fall in, and can not get out without help. Dose apples or potatoes, &c., with strychnine, lay them in their burrows, and exclude the light.

BEGIN TO-DAY.—Lord, I do discover a fallacy, whereby I have long deceived myself; which is this: I have desired to begin my amendment from my birthday, or from some eminent festival, that so my repentance might bear some remarkable date. But when those days were come, I have adjourned my amendment to some other time. Thus, whilst I could not agree with myself when to start, I have almost lost the running of the race. I am resolved thus to befool myself no longer. I see no day but to-day; the instant time is always the fittest time. In Nebuchadnezzar's image the lower the members, the coarser the metal. The farther off the time the more unfit. To-day is the golden opportunity, to-morrow will be the silver season, next day but the brazen one, and so on, till at last I shall come to the toes of clay, and be turned to dust. Grant, therefore, that to-day I may hear Thy voice. And if this day be obscure in the calendar, and remarkable in itself for nothing else, give me to make it memorable in my soul, hereupon, by Thy assistance beginning the reformation of my life. —*Fuller.*

WHY this insatiable craving for riches? Does a man drink more when he drinks from a large glass? From whence comes that universal dread of mediocrity, the fruitful mother of peace and liberty? Ah! there is the evil which, above every other, it should be the aim of both public and private education to anticipate! If that were got rid of, what treasons would be spared, what baseness averted, what a chain of excess and crime would be forever broken! We award the palm to charity and to self-sacrifice; but, above all, let us award it to moderation, for it is the great social virtue. Even when it does not create talents, it stands instead of them.

Ladies' Department.

[LADY, PRAY PARDON US.—Would we could step back a few years; we surely would take off our hat and make our best bow, and ask pardon for the errors that have crept into the Miss Betty Martin "sonnets." Mrs. Partington says errors will happen in the best of families, for they so happened once in her own. And so with the beautiful and graceful sonnets of Miss Betty—not errors of Miss Betty, but errors of the printer; and the only atonement we can make our fair correspondent is, to republish No. 2 of Rural Lays, and at the same time correct the error in No. 1, where we converted "*sprites*" into "spirits," which destroyed the beauty and rythm of the 22d line. If Miss Betty will pardon us, we will be more careful in future, and pray she may find

Among the Farmers of our golden land
A noble suitor, worthy her fair hand;
Man could not ask a brighter, fairer charm,
Than "Betty Martin" mistress of his farm.—Ed.]

[For the California Farmer.]

Rural Lays—No. 2.

OUR HOME IN THE COUNTRY.

NEAR where the Feather River's shores and tide
The "banks and braes" on either hand divide,
My uncle Robin, far from stir and strife,
Enjoys the comforts of a country life;
His cottage home beside a mountain stream,
Embowered in beauty such as poet's dream,
For air-built castles costless may provide,
But seldom seen in common country-side:
The towering pine-clad hills by nature made,
Alike for grandeur, shelter, and for shade,
With grassy dells, and silver brooks between,
Now sporting freely, now again unseen,
As through the trees, alive with love and song,
They dance or dally as they pass along,
Where fairies well might trip with nimble feet,
And nymphs and naiads make the scene complete;
The opening vale extending all around,
Where buckeyes, bays and spreading oaks abound,
Where busy farmers turn the generous soil,
And bounteous crops reward them for their toil,
And Uncle Robin, prudent as the best,
'Tis said by some, surpasses all the rest.

Ours is no cottage built for pride or boast,
But neatly planned, and done at little cost—
A sort of hybrid, of no common kind,
Of villa, cottage, farm-house all combined
I rustic style—a farmer looking place,
Where elegance unites with usefulness.
Back from the house, some lofty oaks between,
(Besides our orchard-gardens intervene,)
Stand the out-buildings, neatly built and plain,
But so contrived as makes my uncle vain;
Not straggling, non-descript, and out of place—
Their true and proper motto "I transgress"—
But so arranged by geometric rule,
As shows, at once, the builder was at school;
By whose be-honored forethought, craft, and care,
They form exactly three sides of a square.
Front of the house no poor parterre is seen—
Unkept, unsightly, dry, and seldom green—
But a broad lawn with "tall ancestral trees,"
Both patriarchs and aborigines;
Grown on the soil, when knew nor white nor slave
Our world of wonders o'er the western wave,
But monuments, by Nature raised, to show
Her children where to build and where to sow.

Here, in this lovely vale, though far remote,
Not half-forgetting, and but half-forgot,
We seek no phantom pleasures never found,
But find our homes with all we want around.

BETTY MARTIN.

Rural Lays—No. 3.

PREPARING FOR BREAKFAST.

SOON as the Morning comes with timid pace,
As if ashamed to show her lovely face,
Or rather, when she scarce has raised her head
From out her mother Night's dark drowsy bed,
Proud of my management, and glad to show
How much I wish to practice what I know,
Alert I rise, no matter, it is best
To set a good example to the rest,
And thus the breakfast tidily prepare,
And lose no time by necessary care.
Our China John, and darkey Dinah, both,
Soon rise to help me, fresh, and nothing loth,—
Poor guileless creatures, whom I love the more
For all they feel, and may have felt before,
When vulgar ignorance, or pompous pride,
Their unpretending face and form deride;
As if the God, who made us all, ne'er knew
So much as they, the favored, vulgar few.
But if they saw how well their busy hands,
And busy feet bestir at my commands,
How kindly, and how cleverly go on,
Our darkey Dinah, and our China John,
I think that every one must needs confess,
I should not, for such conduct, love them less.

While Dinah boils the eggs, and cooks the steak,
A half-stolen minute eagerly I take,
To smooth my hair, and wash my dusty face,
And wipe my specs, and re-arrange my dress:
But soon, with freshened looks, in apron white,
I come again to set the service right,
And have the dishes, each in proper place,
Alike for comfort, garniture, and grace;
In comely rows and figures, learned at school,
When taught geometry by strictest rule—
(Great art, by which our carpenter and I
Could learn to built a barn, and place a pie.)
But first, before I put them on the board,
Come briskly Dinah, of her own accord,
And spreads a cloth, as newly pressed and white,
As e'er met Mistress Dandy Dunmont's sight—
That pink and pattern of a farmer's wife,
Trained in the schools of a Glenburnie life—
No costly cloth inside it ever refined,
But only "twa" of a common kind,
Yet dashy changed, may be, to lessen lost,
To study neatness got with little cost.

BETTY MARTIN.

INTERESTING TO LADIES.—Ta[illegible] and [illegible] arranged [illegible] and [illegible] now [illegible] their own sewing, will be glad to learn of this

Valuable Recipes.

WASHING WINDOWS.—A correspondent of the American Agriculturist, gives the following improved mode of washing windows, which although not wholly new to us, may be valuable to many of our readers: "The nicest article for washing windows is deerskin, as no particles come off to adhere to the glass and make it look as if washed with feathers. There is no need of anything larger than a hand-basin for washing windows. The great splashing some people make in the exercise of their art is entirely useless, and is more-over deleterious. When the water is permitted to run down in great quantities upon the glass, it dissolves the putty and soon loosens the panes from their setting, and also stains the glass. Two pieces of nice wash leather and a bowl of suds, are all that are necessary. Wipe the glass first with the wet cloth or leather, and after it has become dry, rub it with a clean cloth, and it will look clear, and far more so than if rinsed in a dozen pails of water."

NICE JELLY OR SPONGE CAKE.—A lady writer in the Ohio Cultivator,—"Sun Bonnet"—gives the following recipe as one suitable for either jelly or plain cake: One tea cup of sugar, three eggs well beaten to a foam, one teaspoonful of cream tartar, and half teaspoonful sodn. This will make paste enough for two baking plates full, for jelly cake, or one plain cake, which should, of course, be made thicker. For jelley cake, bake thin on plates, and while the cake is hot, spread the jelly over it, and then roll the cake into a kind of cyliudrical coil. When wanted for use, cut it across, in slices. You will find this a quick made and palatable jelly cake. If you use this recipe for plain cake, add such spices as you like best, to the above. This is particularly convenient for people who cannot obtain milk at all times, for making up pastry.

TO RENOVATE SILK DRESSES.—Take the water in which potatoes have been boiled, dip therein a clean sponge, rub carefully, then take a cloth and wipe evenly on the surface. Potatoe water not only renews the lustre of silks, but stiffens them as if starched. Gentlemen's cravats treated in this manner have all the appearance of new goods.

MILDEW stains are very difficult to remove from linen. The most effectual way is to rub soap on the spots, then chalk, and bleach the garment in the hot sun.

MISS SYLVIA HARDY, THE MAINE GIANTESS.—This woman's waist measures *forty-three* inches, chest *forty-seven*, and brain *twenty-four*; yet it is not of fine texture, but is in harmony with the organization as a whole. Her mind is more general than special in its action. The proportions between the body and mind are comparatively good, and if the brain was uniformly developed, and the temperament favorable for mental manifestation, she would exhibit unusual comprehensiveness of mind; but as it is, she will never have a highly susceptible organization, nor that balance of power necessary to produce harmony of mental action.

Her phrenological developments are remarkable. It is almost impossible to conceive of a brain more unevenly developed than her's; some of the organs are exceedingly small and have a limited influence in character, while others are immensely large and controlling.

All the selfish faculties are comparatively small; is perfectly frank, open-hearted, and devoid of deception; has no ambition, fashion, or display. Hope, spirituality, sense of guilt, and devotional feeling, are only moderate qualities. She is not able to mimic others, but simply develops her own tone of mind. Attachment to place and love children is strong; has a comparatively affectionate disposition, but does not love the society of the gentlemen.

She is independent, quite persevering, and most decidedly kind and generous.

Her intellectual capacity is comparatively good; not because she is smart and bright, but has general strength and soundness of mind.—*N. Y. Phrenological Journal.*

THINK.—Thought engenders thought. Place one idea on paper, another will follow it, and still another, until you have written a page. You cannot fathom your mind. There is a well of thought there which has no bottom. The more you draw from it the more clear and fruitful it will be. If you neglect to think yourself, and use other people's thoughts, giving them utterance only, you will never know what you are capable of. At first your [illegible] may come out in limps homely and shapeless; but time and perseverance will arrange and polish them. Learn to think and you will learn to write; the more you think, the better will you express your ideas.

NEW HAY PRESS.—A newly invented hay press is thus described by the New York [illegible] American:

The patent which has [illegible] granted to Peter Mabey of Wallkill, Orange [illegible] relates to the lever press. It [illegible] a square form and [illegible] as [illegible] when moving [illegible] and [illegible] is [illegible] turning the [illegible] is the great object [illegible] There [illegible] a very short [illegible]

WHEN [illegible] is two [illegible]

A Hurricane in Illinois.—A most terrific hurricane and whirlwind, swept over the town of Jefferson, Cook county, Ill., and other places in the vicinity, on Tuesday, May 23d. On the afternoon of that day, a revolving, funnel shaped cloud, passed rapidly along near the ground. It described a small circle towards the southeast, twisting off large trees, and whirling them out of sight instanter. The cloud then broke in two and disappeared, but almost immediately formed again, and passed to the north and west with redoubled violence. It struck a heavy frame house, tearing the roof off instantly, and finally took it together with its contents up the spout. There were nine persons in the house at the time. They were carried a considerable distance, and four met instant death, and the others injured beyond a hope of recovery. The cloud then passed over a post and rail fence, leaving not even a vestige behind. It also took up a barn, throwing it upon the cattle and horses it contained, crushing them in a terrible manner. The house belonged to Mr. Page, whose wife, son, and two grand-children were killed. The timbers of the house and barn were thrown to the ground with such violence as to nearly bury them from sight.

Grasshoppers.—The State Journal says that these animals that have caused so much trouble in Yolo and Solano counties, are now, in myriads, busily ravaging Rrigbton township. The farms of Messrs. Whitesides, Beam, Bowles, and Norris, have suffered severely. Peach trees, grain, corn, grape vines, everything green, is being destroyed by these ruthless insects. Of one the farms mentioned above, has already been damaged to the amount of some $4,000 or $5,000.

MARRIED.

On the 24th June, at Shaw's Flat, by Rev. S. S. Harmon, Mr. Daniel H. Knode and Miss Mary E. Calder.

On the 23d June, at Mississippi Bar, John Teylor and Miss Semantha Millizer.

On the 30th June, in San Francisco, Robt. M. Gardner, formerly of Cincinnati, and Miss Anna Kiren, formerly of N. York.

On the 26th June, in Suisun Valley, Marvin M. Richardson, of Vallejo, and Caroline Bartou, of the former place.

DIED.

On the 20th June, at McCartysville, Santa Clara county, C. D. Buckner, aged about 40 years, formerly of Mexico, Ind.

On the 27th June, in this city, Michael Dugan, formerly of Chicago, Ill., aged 40 years.

On the 1st July, in San Francisco, of typhoid fever, Henry Dunn, of Halifax, N. S., aged 36 years.

SPECIAL NOTICES.

☞ **California State Agricultnral Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the California Farmer, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the President,
v3-26 C. I. HUTCHINSON.

☞ **Opinions of Regular Physicians.**—
Exeter, Me., Sept. 30.

This certifies that I have recommended the use of WISTAR'S BALSAM OF WILD CHERRY for diseases of the Lungs, for two years past, and many bottles, to my knowledge, have been used by my patients, all with beneficial results. In two cases, where it was thought confirmed consumption had taken place, the Wild Cherry effected a cure.

E. BOYDEN, Physician at Exeter Corner.

Dr. William A. Shaw, of Washington, N. C., writes:—"As Wistar's Balsam of Wild Cherry is the only patent medicine to which I have ever given my public recommendation, I shall not be suspected by the candid of giving rash or precipitate testimony."

Sold by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

☞ **Bleeding at the Lungs.**—
Seth W. Fowle, Esq.:

Dear Sir,—Having been attacked with hemorrhage of the lungs, which left me with a troublesome cough and the usual debility consequent upon such an attack; and having cured myself, by the use WISTAR'S BALSAM OF WILD CHERRY, I feel it a pleasure and a duty, to testify to its merits. My general faith in patent medicines is small; but for those who are suffering under pulmonary attacks, I am persuaded that the Balsam is an excellent preparation.

Yours, very truly, JONA. R CHILDS,
Editor Chicopee Telegraph.

Chicopee, Mass., Feb. 20, 1854.
*** Be sure it is signed I. BUTTS on the wrapper.
Agents for San Francisco, B. B. THAYER & CO.
Sold by all Druggists. v3-26

Now is your Time to Buy Cheap Goods!

Hamburger & Brothers, who have been established in this city since 1850, and well known all over this section of country, take pleasure to inform their friends and customers in general, that they have now in store, and receiving in addition by every clipper and steamship, from New York, a general assortment of Fancy and Staple Dry Goods, consisting of plain black and brocade Silks; plain, changeable and plain colored Silks, fall qualities; French and American Lawn; white and colored plain and embroidered Swiss Muslins; Bareges and Silk Tissue of all colors and prices; Needle Worked Bands, Collars, Sleeves, Chemisettes and Linen C. Handkerchiefs; Swiss and Lace Curtains.

A large assortment of all kinds of Bonnet Ribbon, Irish Linens, Cotton Shirting and Sheetings of all styles. Ladies white and colored Cotton Hose; Kid, Silk and Lisle Thread Gloves. With a general assortment of Fancy Goods too numerous to mention, which we offer to sell at twenty-five per cent. cheaper than any other house in this city, as we are direct importers of our goods.

A call is only necessary—you can judge for yourself.
☞ Ladies are particularly invited to call.

Store, 91 J street, near Fourth, Sacramento.

P. S.—We keep constantly on hand a full supply of Silk and Straw Bonnets, and all kinds of Millinery Goods. v3-25.

Latest Importation.

We would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of
STAPLE AND FANCY GOONS,
which have been received direct from the manufacturers and importers the past week, per clipper ships "Flying Cloud," "Samuel Russell" and "Red Rover," which, in addition to our former stock, makes it by far THE LARGEST IN THE STATE OUT OF SAN FRANCISCO! And for quality and cheapness, we defy competition; and we say, without fear of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.
200 Parasols, new, rich and beautiful;
100 ps. latest style Bonnet Ribbons and Trimmings;
50 ps. assorted colors, Bareges and Tissues;
85 patterns fancy Bareges and Tissues;
25 ps. plain and dotted Swisses;
40 ps. plaid, striped and plain Jaconet;
865 yds. Wash Lawns, $1 a Dress Pattern.

Mens', Youths' and Boys' Summer Clothing.

Manufactured by our House in New York, in the very best style.

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.
3v-16 isti C. M. DAVIS, Proprietor.

Wilson's Exchange,
By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. James, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v3-25

v3-14 J. L. POLHEMUS.

New Invention!
Now, Count Your Chickens!!

THE subscriber begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls. After a series of experiments the proprietor has succeeded in producing a machine by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Geese or Turkeys. After the first brood, which in fourteen or twenty days, will be of certain result, and it requires but little attention, only every twenty-four hours—the cost of fuel and provisions being only some $2 50 to $3 each twenty days.

The machine will be on exhibition at the State Fair at Sacramento, where it will be in operation both day and night. In the mean time it can be seen at the residence of the subscriber, on Third street, between J and K, South Beach, near South Park.

JOHN J. FULTON
Third street, South Beach, near South Park.

AGRICULTURAL, &c.

Pitt's Double Pinion Eight or Ten Horse Power.

THIS Horse Power, as now manufactured by the subscriber, is admitted by those who have purchased and used it, to *surpass*, for strength, ease, durability and cheapness of repair, any Power ever offered to the public.

Their great superiority over other powers, consists in the plan of construction. It will be seen that this Horse Power is just double the strength of any *single geared power*, and is the only real Double Pinion Power in existence.

Notwithstanding it is sufficiently strong and warranted to stand the full strength of eight or ten horses, it is also warranted to give as much effective or useful power, when driven by one or two horses, as any other power, whether constructed on the endless chain or lever principle.

I have, for the last eight years, manufactured and sold a large number of these powers, during which time they have been thoroughly tested, and gained a high reputation over all others: *I therefore challenge competition!*

At the great trial of Horse Powers at Geneva, in 1842, where it was thoroughly tested, it received the New York State Agricultural Society's First Premium, "for the best Horse Power for general purposes." At Cleveland, O., in Sept., 1852, it also received the State Society's First Premium. Also, at the great Agricultural State Fair held at Pittsburg, Pa., in 1853, it was awarded the First Premium.

I deem it unnecessary to add any further testimonials to corroborate the high recommendations here given, as the best recommend of its merits is a thorough trial.

The above machines are for sale by
CASE, HEISER & CO.,
No. 60 Sansome street, San Francisco, Cal.

who are also prepared to furnish castings and extras for repairs for said machines, and are appointed my Agents to receive orders or sell my machines in future in California and Oregon.

JOHN A. PITTS.
Buffalo, April 1st, 1855. v3-18

Sacramento, May 1st, 1855. v3-14

Works in Press.

By T. B. PETERSON, Philadelphia.

T. B. PETERSON, [illegible] street, Philadelphia, has in press, the "Mysteries Bazar" by Mrs. Southworth, author of "Lost Heir," "Wife's Victory," &c.—in which is contained, besides the above, [illegible] Mrs. S—being the last work written by this favorite author, which has been pronounced by all that have read it to be her best and say one of the most interesting works ever published in America. They all say it is an elaborate, brilliant and deeply interesting work the characters are natural, and are admirably sustained. The [illegible] of the interest is that of a perfect woman, but yet a [illegible] creation. The opinions of the press are eagerly awaited. The New York Dispatch says: [illegible] A [illegible] C [illegible] and may well be the [illegible] in a [illegible] Publication and for sale by T. [illegible]
v3-[illegible] 102 Chestnut street, Philadelphia.

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter be time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect lifenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

LITTLE & CO.,
147 Montgomery street, San Francisco.
APOTHECARIES HALL.

THIS celebrated establishment—one of the finest in the world—is under the immediate supervision of Mr. WILLIAM B. LITTLE, the pioneer partner of the late firm of Thayer & Little. Mr. Little has devoted seventeen years to the profession of Chemist and Apothecary, and is a member of the Mass. Coll. Pharmacy and of the American Pharmaceutical Association.

None but the Purest and Best Medicines are sold at this establishment, and the prices have been reduced to conform with the times.

There will also be found at this establishment a splendid assortment of Fine Perfumery, Hair Brushes, Fancy Soaps, Hair Oils, Genuine Lubin's Extracts, Cologne Water, Bay Rum, Tooth Brushes, Shell Combs, Toilet Mirrors, Fine Pomatum, and every article necessary for the Toilet. Patent Medicines, European Leeches, and all articles usually kept in a first class establishment of this kind, will be found constantly for sale at the most reasonable prices, and invariably of the best quality.

To Advertisers.

In order that our patrons may have some idea of the extent of our circulation in this country and abroad, and the benefit which may derived from advertising in our paper, we publish the following list as comprising most of the prineipal places in which our journal circulates, showing them how useful it is to those who wish their business widely known.

Agricultural is synonymous with the word "home." The cultivation of the earth is hut a preparatory step for building up homes and the family eirele; and here within this eirele it is our desire and intention to have the CALIFORNIA FARMER find its way. Advertisers, therefore, of everything that pertains to home comforts or luxuries, will perceive what advantages may he ohtained from their advertising with us. Dry Goods Dealers, Shoe Dealers, Furniture Dealers, Crockery Warehouses, Family Groceries, Jewelers, Booksellers, in fact every one who receives benefit from the patronage of the family eirele, (and what trade can live without it?) we invite to reflect upon these suggestions. Our present list of advertisers will attest that this is being understood and appreciated, and it will be our aim to present as early as possible an additional cover, prepared more especially for the display of such engraved plates and cards as require it. The following are among the prominent places for our paper:

San Francisco, Sacramento, Stockton, Marysville, Grass Valley, Rough and Ready, Nevada, Downieville, Yreka, Shasta, Columbia, Jackson, Sonora, Colusa, Sonoma, San Juan, Monterey county; Santa Clara, Santa Rosa, Santa Cruz, San Jose, Mission San Jose, Napa, Nicholaus, Benicia, Petaluma, Placerville, Pajaro Valley, Oakland, Alameda, Union City, Alvarado, Auburn, Bodega, Bidwells, Butte co.; Hamiltan, Jone Valley, Knight's Landing, Yolo county, Los Angeles, Monterey, Martinez, Port Townsead, Oregon; Uniontown, Humhoidt Bay; Salem, O. T.; Oregon City, Portland, O. T.; Washington Territory. Ta every Post Office and Express Office in this State, end ta nearly every State and Stato Society in the Union. In addition to this it is sent to many of the principal cities in England, Scotland, Ireland, France and Belgium.

VALUABLE DISCOVERY.—A large number of Greek and Latin MSS. have been found in the Ottoman Empire, by a company of gentlemen, who have been deputed by the French Government to make literary researehes wherever opportunity was afforded by the passage of the armies. The precise number of Oriental MSS. in all the libraries of Constantinople, has been ascertained, and the whereabouts of a valuable treatise on ancient Egypt, by one Ald-al-Lathif, who lived in the middle ages, has been discovered.

FRANCE AND ENGLAND.—The value of the agricultural produce of France is, two hundred millions sterling; of the United Kingdom, a hundred and sixty millions; hut there is a striking contrast in the proportion of the animal to the vegetable produets whieh go to make up this enormous sum in the two countries. In Franee the animal products are but £64,000,000, while the vegetable amount to £140,000,000 sterling. In the British Isles the two items are balaneed, each being estimated at £80,000,000.

Storage and Commission.

THE subscriber having purchased the entire interest af Messrs. Tilden & Little, in the Storage and Commission Business, heretofore conducted in the EMPIRE WAREHOUSE, is now prepared to continue the business in all its various branches, at this old established and thoroughly Fire-Proof Warehouse, on as reasonable terms as any other Warehouse in this city; will make *cash advances on all goods*, when desired; and hopes to retain a continuance of the old business.

HIRAM W. BEEBE.

Referenc s—Messrs Case, Heiser & Co.; J. W. Britton; James Doyle; Barber & Boyd.

Notice.

WHEREAS certain impressions are gaining circulation connected with the insolvency of Messrs. Tilden & Little, late lessees of the Empire Warehouse, which if uncontradicted may cause unnecessary alarm, I feel it a duty to myself to assure those having goods stored there, that all difficulties which exist, are confined entirely to their connection with, and the suspension of, the Eclipse Flour Mills, and that all other goods now stored in this warehouse, will be duly receipted for by me, upon presentation of the old Receipts.

EMPIRE WAREHOUSE,
v3-22 HIRAM W. BEEBE.

Bookseller's and Stationer's

WHOLESALE AND RETAIL WAREHOUSE.

WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of clippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases el-ewhere.

PACIFIC EXPRESS COMPANY.

THE late employees of ADAME & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business ta their exertions and personal energies.

In conclusion they would solicit a fair share af the favors of the public, pledging themselves to exert their best endeavors to transact such business as may he entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended ta at any of the points mentioned above.

R. G. NOYES, President.
San Francisco, March 1st, 1855. v3-10.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,

No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city; by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and else where.

To give an idea of the extent af our Registry, we may mention that up to the present time it contains the names and address af *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

Great Bargains! Selling off!!

AT

Diamonds set in any style. Quartz-work made to order. Clocks, Watches and Jewelry repaired to order.

v3-23 SAMUEL JELLY, 48 J street.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men af the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits af a cure, is no longer a matter af doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof al the curability of a disease than it has in that af tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds af cases af

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many al them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof af aur assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases af the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparatian of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case af arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will he seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is over curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart af sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr. Wistar's Balsam of Wild Cherry.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself *principally* to his office, where he proposes to treat all

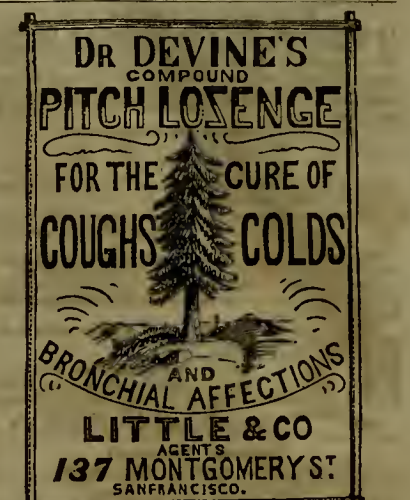
Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and *Hospitals*, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus;) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

OFFICE HOURS: { Morning, From 10 till 12. Afternoon, " 2 " 5. Evening, " 7 " 9. } v3-12

Spalding's Rosemary Hair Oil.



Take the sweetest of names and the fairest flowers,
Combine them, and lo, what a treasure is ours!
For blooming in winter, when earth is all dreary,
We hail with delight the green fragrant ROSEMARY.

Its dark shaded leaves with an essence is filled,
Which, when from its secret recesses distilled,
And combined with an Oil of a quality rare,
(As by Spalding,) is just the right thing for the hair.

And Spalding esteems it no more than a duty,
This offering to lay on the toilet of Beauty,
For baldness and Time's bad effects all may foil,
By the use of his Castor and Rosemary Oil.

Sold by LITTLE & CO.,
v3-22 Montgomery street, San Francisco.

MISCELLANEOUS.

TO PREVENT COUNTERFEITS, EACH BOX OF GENUINE *DEVINE'S PITCH LOZENGES* will in future bear the *Written Signature* of "Little & Co."

THIS CELEBRATED REMEDY

Is offered to the *WESTERN WORLD* in full faith, as being

The Only Certain Cure ever Discovered

For COLDS, COUGHS, SORE THROAT, CROUPS, ASTHMA, WHOOPING COUGH, BRONCHITIS, INFLUENZA, HOARSENESS, Incipient CONSUMPTION, PAINS IN THE SIDE AND CHEST, AND ALL CURABLE CASES OF DISEASES OF THE LUNGS.

They will be found the best article in use for the RELIEF af the Consumptive Patient when past all hopa of recovery, and will in any case where lungs sufficient are left to maintain life, check the ulceration and raise the patient to health.

Certificates of cures, to be relied on, can be found in the circulars left with the agents, and the public may be assured that we shall never publish anything we do not believe entitled to the fullest confidence, as truth,

"Nothing but the Truth."

The world is challenged to produce such cures as are effected by faithfully using this cheap and pleasant medicine.

This remedy is pronounced by Clergymen, Orators and Vocalists to be the best in use for clearing the voice and relieving the irritation of the throat, so troublesome to public speakers.

Price 50 cents a Box, or 3 Boxes for $1.

LITTLE & CO., Apothecaries,
137 Montgomery street,

Agents for California, Oregon and the Sandwich Islands, to whom all orders must be addressed.

AGRICOLA'S LETTERS.—NO. 7.

On Grasshoppers.

EDITORS FARMER: Being aware that your wishes will be most effectually carried out, by taking special notice of any circumstance connected with Agriculture, which more immediately demands attention, I hope that no portion of your readers will blame me for devoting this letter to the subject of Grasshoppers, although the information I can furnish is but limited, and the conclusions, which I have drawn as natural inferences, rest on facts not sufficiently complete to enable me to characterize them as other than mere hints, scientific it may be, but based on an uncertain foundation.

The two families of Grasshoppers (*Grillida*), and Locusts (*Cicada*), with all their sub-varieties, belong to the Order *Orthaptera* (i. e. straight-wings), of which the wings, when not in use, are folded length-wise in narrow plaits like a fan; and are laid straight along the top or sides of the back. They are also covered by a pair of membranes like wings, which, in locusts and grasshoppers, are long and narrow, and lie lengthwise on the sides of the body, sloping outwards, on each side, like the roof of a house.

Although the ravages of these creatures are distressing, and the means of preventing such misfortunes as they occasion, but limited in effect, their natural history, identical in character with that of winged insects generally, is very interesting. The lives of all such insects during the term of their winged existence are but short, seldom exceeding two or three weeks, or at the longest of as many months—one instance, the often mentioned ephemeris, being generally reputed to live as a fly for only a few hours; or, at most, for one day. During this brief period they are principally taken up in propagating their species, and selecting a proper place for and depositing their eggs; and this grand object of their short lives as flies, being accomplished, they soon after die. The eggs, in the case of locusts and grasshoppers, are glued together in little clusters, and deposited under ground, where they take only a short time to be hatched by the heat of the sun into grubs; in which state they continue through the winter months, burrowing among the roots of grasses and other vegetables (on which when in that condition they subsist) and unable to move from place to place except by the use of their legs.

With the warm weather of spring they change their coats. "The wingless insect," says Harris, "moults its skin, and after one or two moultings it [illegible] in size by leaps proportionally much greater than before, with little or no trace of wings to make their appearance on the top of the back. After this it commences to eat voraciously, grows larger and larger, and hops about without any aid from its short and motionless wings, repeatedly casts off its outgrown skin, appearing each time with still longer wings and more perfectly formed limbs, till at length it ceases to grow, and shedding its skin for the last time, it comes out a perfectly formed and matured grasshopper, with the power of spreading its ample wings and of using them in flight."

The grasshopper is now perfect, and the ravages which, in this condition, it commits, are too well known to require any description. I am glad however that some, although but limited, information as to the facts connected with their progress in our State, has been already furnished, so as to enable us, in some measure, to consider the matter, for the purpose of ascertaining how far we may call on experience or science to assist us, against this terrible opponent to our Agricultural prosperity.

It appears, as mentioned by Mr. Warren and others, in the FARMER of 28th June, that moisture and shade they carefully avoid, that they have no great attachment for gardens where cultivation has been constantly going on, that they seldom attack ripened grain, and that they do not encroach on land which has been overflowed. Mr. Horner also states, in the Chronicle, that they are not produced on land under cultivation. These facts are, it is true, but meagre; but let us inquire what may be the reason of these likes and dislikes; and, if we cannot add a page to former science, endeavor to throw out some hints which may enable others to do so. Such is every man's duty; and if I can, by investigating the subject, throw such light on the matter as may tend to modify the evil in future, or exert but a partial remedy at present, no farmer, I am confident, will grudge the time occupied in the perusal of this letter.

"In 1663," Morton, an early writer on the subject, states in his *Memorial*, "there was a numerous company of flies, like for bigness unto wasps and bumble bees. They came out of little holes in the ground, and did eat up the green things; and made such a constant yelling as made the woods ring of them, and ready to deafen the hearers." In the south of France, the people make a business, at certain seasons, of collecting locusts and their eggs, the latter being turned out of the gound, cemented and covered with a sort of gum, in which they are enveloped by the insects. On such occasions, it is stated, a boy will collect as many as fourteen or fifteen pounds in a day. Now, whether in the state of eggs or of grubs, there is no doubt but an inundation or irrigation, laying the ground under water so long as would shut out the air, for only a limited time, must effectually kill them. Hence one reason why the creature is not found where such inundations have taken place; or only in very limited numbers, partly, because all the young grubs have been necessarily destroyed, and partly, no doubt, because nature has furnished it with instincts strong enough to warn it from situations so evidently fatal to its race. The instinct of animals, however, does not proceed from any act of memory, but from some delicacy of perception, sufficient to guide them by the influence made on the organs of such perception. Now, if the exhalations of the soil, or of plants where under cover, or where they have been subjected to the influence of water, or even in well cultivated gardens, are similar to those where it has been naturally overflowed, we need not wonder, when the insect is principally occupied in finding out proper places in which to deposit its eggs, that it should shun, or pass over quickly, any place which it has reason to look on with suspicion. But the laws of Nature are always simple, and we may conclude that in every such instance the creature ascertains some plants, or probabilities of such plants from the character of the plants which grow on them and principally by their taste and scent. In other words, that it will only eat plants which have been for some time exposed to a warm and drying sun without having supplied to them such a liberal supply of moisture, as such a natural cause as inundation would have produced. This is corroborated by Mr. Warren, who, in an article in the FARMER already referred to, says: "In gardens where a constant cultivation has been going on, and, the ground is moist, they pass over quickly—seeking dry soil." Now, if this be the case, let us see whether there is any difference, in plants on a dry soil, so very material, that would make it possible for us to find some remedy, by means of which we may be enabled, so to alter the character of the plant, as to impose on these merciless intruders; or, if not to impose on them, to furnish them with provisions so unsavory to their palates, as must needs make them beat a retreat, before they have staid longer than merely to taste them. Likewise let us see whether we may not thus solve the apparent enigma, why shading plants should be a means of preserving them from their inroads? In the letters written by me, in the two previous numbers of the FARMER, I have endeavored to show the *modus operandi* adopted by Nature, to produce the growth of plants, and how, during the day, their tissues are filled with sap of a more alkaline character than by night. If your readers are not satisfied on that point, from my previous reasonings, I would refer to the testimony of Liebig: "This chemical action," says he, "is shown very plainly in the leaves of the *Cotyledon calycinum*, the *Cacalia ficoides*, and others; for they are sour like sorrel in the morning, tasteless at noon, and bitter in the evening." This, of course, takes place when the plants are sufficiently watered, to enable them to carry on the intentions of Nature with facility. When such a supply of water is not afforded, the natural consequence is, that the plant gets more and more alkaline in its character, there is no such supply of moisture by night as would enable it to be "sour like sorrel in the morning"; and every night, it becomes more and more bitter. This is exactly the indication of a warm, dry, and upland soil—the very place where the grasshopper has got to deposit its eggs. Consequently all that Nature, acting under her Great Governor, had to do, was to implant in the grasshopper and locust, if not a love of the bitter, at least a dislike to the tasteless, and an abhorrence of the sour, or anything containing a plentiful supply of oxygen, to make it avoid those very places, where, in countries which it infests, it would in all probability be dangerous for it to deposit its eggs.

This accounts for the benefits proceeding from an awning by day, and watering by night; as Nature is thus enabled to recover the balance in favor of oxygen, which had been altogether in favor of the inorganic alkalies of the plant. Now may we not do the same thing, by the application to their leaves of diluted sulphuric acid? Professor Johnston proposes it as a manure for grass, to be applied in the proportion of about two gallons of acid to three or four hundred gallons of water per acre. This was where the soil was not so dry as with us; consequently we ought, certainly, to dilute such an application with three or four times the quantity of water mentioned; and apply it in successive evenings. This I do not vouch for as a remedy, but merely recommend it and when I do so, I also recommend *extreme caution in its use.*

As to the information of Mr. Horner, in regard to grasshoppers not being produced on cultivated land, it is a fact which we might naturally expect. If the creature is endowed with an instinct, sufficient to enable it to shun such places, it does not deposit its eggs there; for the reason that where land is well and [illegible] cultivated, and the ground clean and free of weeds, its young must inevitably perish from want of nourishment during winter. If it [illegible] they *do* perish, or are [illegible] consequently the effect is the same whether [illegible] great and natural [illegible] If the grasshoppers have deposited their eggs in the ground, and the grubs produced from them are burrowing among its roots, a great number would necessarily be destroyed, if they were not so entirely, wherever the fire went. This it may be impossible to do, where the country is more thickly settled; but how much of hill pasturage is there which might be so burned, very much to its advantage otherwise, and without the least probability of any dangerous result?

AGRICOLA.

A Splendid Barn.

NEXT to the comforts and conveniences of the the dwelling for his family, a farmer should pride himself upon a barn for his stock, his granaries, and his produce.

The Boston Cultivator comes to us this mail, embellished with engravings of the splendid barn of the Hon. B. V. French, of Braintree, one of the most distinguished and successful farmers in Massachusetts. The size of the barn is as follows: the first story or manure cellar, seventy feet by fifty-seven, laid in solid masonry; a floor laid with split stone, on cement and mortar. The second story,—with sheds for carts, wagons, &c., thirty feet by fifteen, together with bins for vegetables and grain, to be filled through scuttles from the third story,—is surrounded by solid walls of masonry, and the whole floor equals an area of *one hundred by fifty-seven feet.* The third story is one hundred feet by forty-two. In this story are ten bays for hay, on each side, ten feet by fifteen; entrance for wagons, carts, &c., with hay scales, scale beam, &c.

This barn is believed to be the finest in the county of Norfolk, if not in the State. The sketch of it, in all the particulars, with the drawings, occupies one and a-half pages of the Cultivator, and is on file at the Rooms of the Society, where all who desire to see the plan may call and examine.

We add the opinion of the Committee of the Norfolk Society, who visited this barn. They say: "We cannot but notice great improvements in the construction of farm buildings in different parts of the county. We regard this as an indication of the increased interest as well as success in agriculture, and of more study and reflection upon the best method of conducting its operations. Among those recently erected, we might specify the barn of Hon. B. V. French, of Braintree, as for convenience and labor saving, an almost faultless model. We would advise all of whatever means, who intend to build, to examine Mr. French's barn, because, in our opinion, it is excelled by none in the county."

We have often referred to the importance of farm buildings in California—to sheds for stock, for shelter in the rainy as well as the dry season, and for the preservation of implements and the produce of the farm. Immense losses annually occur for the want of such buildings, and to those who intend to build a *first rate barn*, the barn of Mr. French we invite their attention to the plan of.

REMEDY FOR BURNS AND SCALDS.

MESSRS. EDITORS: Wheat flour (Farina) as a local application to burned or [illegible] surfaces, and of kindred inflammatory action combined with other treatment, is the most soothing and valuable remedy known probably owing to the presence of *gluten.* An artificial [illegible], is instantly formed and maintained, and which protects the diseased part from the [illegible] of the atmosphere. The writer has [illegible] it in practice for upwards of twenty years, and always with favorable results.

B. B.

TWENTY TONS OF HAY PER ACRE.—It is stated by the Cultivator as an [illegible] shown by Mr. [illegible] of Rutland county, that twenty tons of hay had been raised on a single acre, in Rutland, the last season. It was [illegible] upon which grass had been [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, JULY 13, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

☞ MANUFACTURERS of every branch, Nurserymen, Seedsmen, Florists, Booksellers and Publishers, and every branch of business connected with California interests, should advertise in the CALIFORNIA FARMER, if they wish to have their business known over the country.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUGHINSON, President.

O. C. WHEELEN, Rec. Sec.

Sacramento, June 23d, 1855.

Error in Dairy Houses.

FROM past experience in the dairy houses made of redwood and similar material, it is now clearly evident they are not what they should be, and will not only result in losses to the dairymen, but will retard the enterprise. From many sources we learn of the difficulties arising from all wooden buildings for dairies. From Mr. Horace Gushee, the well known dealer in dairy produce in Washington Market, San Francisco, we also learn that those who have wooden buildings in the Petaluma and Sonoma Valleys are realizing evils during this hot weather. In some cases the cream *seems to melt upon the milk*. But in the old *adobe* dairy rooms no difficulty is ever experienced.

The dairy buildings of Gen. Vallejo work to a charm, and it is found that an *adobe* of 12 by 16 is *the* thing for a California dairy room; here everything works to a charm, while in a wooden building butter cannot be made well, and when made neither looks well nor keeps well.

These are important facts, and we shall be glad to have them carefully noted and facts sent to us, that others may be benefitted by tested results.

THE KING OF GRASSHOPPERS.—On our passage down the river on Sunday last, we were shown a grasshopper which was taken from a hill of corn in the garden of Gov. Bigler, at Sacramento, by C. P. Duane, Esq., while on a visit with the firemen last week. This monster insect was from three and a-half to four inches long, of a light green color, long legs, full bright eye, and closely filled one of the round match boxes commonly known as the lucifer box. This insect was in charge of Chas. Heiser, Esq., who was taking it to San Francisco, for examination and experiment by Dr. A. B. Stout. We hope to receive a note from the doctor as to its species, &c.

DEATH TO THE GRASSHOPPER.—On Saturday evening and Sunday morning last, the Bay of Suisun and the waters above were literally covered with grasshoppers that had fallen from the masses that were passing across from land to land. Thus we shall be relieved in some measure and we would fain hope it may be the precursor of their "passing away."

Tilt and Tournament.

The days of Chivalry come back again!

THE order of creation, the laws of nature, and the wants and necessities of our being, all tell us of "day and night," "summer and winter," "seed time and harvest," "labor and rest;" and we are instructed that there is a time for all things—to "laugh as well as cry," to "play as well as work." Conceiving it, therefore, in accordance with the laws of our nature and being, to enjoy all that appropriate recreation and pleasure necessary to give to mind and body a due relaxation from continued wear by reason of too much and too incessant toil and care, and knowing too that from the nature of our climate and seasons and their effect upon our systems, that they create a more joyous and livelier temperament and enable us to endure more hardships and failures, to bear our losses and disappointments better, we feel it a duty incumbent upon us to promote such rational recreations and pleasures as shall give to our physical nature the ability better to bear and endure the great fatigue, labor and exposure to which many are called, and to give to the higher nature, the mind, that relaxation and respite, and to add to it such a refreshing, as social entertaining pleasures always give, that it shall return to its duties with renewed vigor and increased power and strength. Believing thus, we would suggest to the Executive Committee of the State Agricultural Society, the importance of uniting a series of Festival Sports during the coming State Fair and Industrial Exhibition, (under such regulations as shall secure the utmost order and decorum,) as shall give to the public, recreation, entertainment, knowledge and pleasure, and at the same time be free from that confusion and disorder, too often attendant upon field sports and races.

While reflecting upon some plan, and recalling to mind the means at hand to accomplish what is most feasible, what would be most acceptable and what we have within our reach and at our command, the sports named at the head of this article strike us as most appropriate and useful, and we believe it may be successfully carried out.

A TILT AND TOURNAMENT.—To accomplish it in a most desirable form, it should have the figure, or be represented in the form of human progress, as connected with the advance of science. The following we suggest as the brief outlines, which we hope may be the basis from which shall spring the best and most appropriate series of entertainments:

Within some inclosure or grove, the series should commence with the Aborigines of this country.

First. The native Indian, with his bow and arrow, his spear and other weapons of war, in full costume, should go through and perform those feats of dexterity and skill for which he is so noted.

Second. The Mexican, with his well trained horse and his lasso, performing what no others can perform with like dexterity, and showing his knowledge of the horse, his own and the animal's skill.

Third. The Spanish Cavalier, in full costume, gaily decked, "with spear in rest," and helmet and plume, ready to do battle for her whose scarf he wears.

Fourth. The American citizen, in saddle, testing the speed and displaying the beauty of the noble horse.

Fifth. Ladies in saddle, giving evidence of their skill and accomplishments, guarded by a suitable escort.

These sports to be so arranged that suitable prizes shall be bestowed upon those most meritorious. The prizes to be given or bestowed by those who alone can raise and exalt such sport, and give it a character and free it from any evils now connected with pleasures and pastimes. The closing scene to be a Festival Dinner, no gentleman to attend without a lady.

Thus it will be perceived would be represented the gradual rise and progress of civilization and human advancement to the present time. Thus would be presented as a beautiful diorama, the advance of our institutions, with their attendant blessings. The finale, the Social Feast; the table to be loaded with the "richest products of the earth," decked with the "brightest flowers" that ever bloomed, and honored by the presence of her whose presence restrains from excess or rudeness, whose smile of approbation nerves the arm and cheers the heart in the hour of trial, and for whose happiness it is the duty of man to labor. Thus would we have such a scene of enjoyment. Prizes bestowed by her fair hand, and her presence at our sports and social feasts. Ribaldry and rudeness, drunkenness and blasphemy shrink away abashed; and we would have presented such an entertainment, as while it shows the progress of our country and her institutions, will serve as a stimulus to still greater and higher achievements.

With the hope that all who feel a desire for progress will give these suggestions force, and the hope that the press will speak, we lay these plans before the public, with our best wishes for human advancement.

It will be remembered that these entertainments are proposed to be held at the time and during the Exhibition of agricultural products, manufactures, mechanical skill and works of art; and also at the time of the Cattle Show. Thus, visitors could have an opportunity of witnessing the evidences of our State's prosperity, and realizing her real progress.

Believing it the duty of every good citizen to encourage these, we look hopefully for a full realization of success to the great work of the Fair and its connecting influences.

Grasshoppers at Sacramento.

ON Friday last we visited "Smith Gardens," for the purpose of an ocular proof of the destructive ravages of this scourge, and we were fully convinced of the utter impossibility of any one so to describe them in their work of destruction as to convey any adequate idea of their numbers and rapacity.

Upon entering the gardens we saw a long line of men, some twenty or twenty-five, with large besoms in their hands, swinging them to and fro, brushing trees, plants and shrubs, the men all moving forward in a line and driving these insects before them, and such were their numbers that they formed a cloud before the men, extending 20 to 40 feet in front and 10 to 15 feet high, in thick masses, thick as they could fly. Such were the numbers at the gardens, that the men only had to return back to where they began, and a similar quantity were again at work, which in like manner were driven out. This labor has been continued for more than two weeks, the number still coming in from the adjoining grain fields. This heavy bill of expense is to be added to the destruction of some sixty acres of as fine vegetables as were ever grown. And the loss does not end here. In addition to all this, a fine flower garden is literally stripped of all beauty and comeliness, also strawberry grounds the most extensive in the country, as well as a fine nursery of many thousand young trees, grape vines, &c. But the heaviest loss is the splendid peach orchard, acknowledged to be the most fruitful and promising in the whole State.

We passed through the whole grounds and orchards—we gathered quantities of the whitened pits from the peach trees that lay upon the ground, and saw the stripped branches and cut limbs—we passed to the fine pear orchard, that was supposed to have escaped, but which had been left leafless by these remorseless pilferers. In the anxiety to save some five or six hundred fine and thrifty pear trees, drilling had been wrapped around them and *pinned up*. Unfortunately the *stakes* that supported the trees prevented pinning the cloth close to the bottom of the tree, and here the enemy entered and pillaged every leaf and tender branch. *Had the trees been bagged close they would have been saved.*

When we look over this splendid garden—when we remember the large outlay that has been made—when we call to mind the close application and untiring zeal which the proprietor has manifested to make his grounds a credit to the city and county of Sacramento, as well as to the State—we feel that a loss of this kind is a public calamity; and every generous mind will yield a noble sympathy to Mr. Smith, for his loss cannot be made good by money—it is the labor of years, and the bright prospect of seeing the work of his hands prosper is of more value than gold. Although we esteem the loss more than $20.000, yet we rejoice to know even this retarding blow cannot prevent Mr. Smith from manifesting the same determination to go on and excel in the work he has undertaken. For this noble spirit he deserves well of our community.

INJURY TO GRAIN.—We have been informed by those who have just passed through Petaluma, Bodega and Russian River grain fields, that the farmers have but slight hopes of harvesting any crop this year—the grain being almost a total loss. We feel convinced from other facts that many parts of the San Jose Valley and Alameda county will come short of an ordinary crop. Large tracts of land will not be harvested at all—rust, smut and blight affecting the crops more or less. We trust, under these circumstances, if any rise is realized, the cultivator of the soil will reap the benefit, and thus aid for past losses.

Contra Costa Side.—San Antonio.

ANOTHER trip across the Bay, gave us an opportunity to visit "Shell Mound Ranch," the fine fruit grounds of J. L. Sanford, Esq. These grounds are about half a mile from the Ferry landing. A pleasant circular road brings you to the grounds, which form a promontory near the head of the bay. A neat cottage stands upon the apex of the mound, surrounded by a pretty collection of roses and other flowers, now in bloom. From this mound, you have a view of the entire grounds, well stocked with nursery rows of trees of all kinds, fruit and ornamental. A large portion of the garden is devoted to strawberries, and we think from the extent of the grounds, the number of the varieties, and the quality of the fruit now ripe, that Mr. Sanford will rank well up the column. There was one feature of his strawberry-grounds that gave us much satisfaction—they were all clear and distinct varieties, and each classed in separate collections. The following varieties we thoroughly tested, and found them correctly named. We ate freely and without stint of each and all, and we aver the fruit as fine as any one could require. Berries from three to four and a half inches in circumference at this season, dry as it is, we esteem a remarkable feature in strawberry culture. The varities tested, were British Queen, Black Prince, Hovey's Seedling, Hovey's Pine, Burr's New Pine, Prince of Orange, Crimson Cone, Virginia, Moyomensing Pine, Hautbois, Columbus, and McAvory's Superior. In addition to these kinds, there were several others—new vines just set out. The bearing beds, were in full fruit—ripe, green, and full blossoms on them at the same time, and in abundance too. We learn that about *one and a half bushels* of berries were taken from these vines "Fourth of July time," and we saw nearly half a bushel preparing for the market.

The system of cultivation practiced by Mr. S., we think most excellent. The vines are in rows, from three to four feet apart; the ground highly cultivated between the rows; the vines freely irrigated, and after the water has been applied and the ground partially dried, the earth is cultivated finely. This prevents baking, and gives the earth a fine finish.

One feature of the landscape, and most prominent, was three large windmills, in constant move, pumping water into tanks, from which it is conducted through hose over the grounds.

It was particularly gratifying to us to see the grounds so neat and highly cultivated; but what most attracted our notice was such a freedom from weeds, the presence of which so often disgraces places called gardens. There can be no excuse for any one who permits his grounds to be overrun with noxious weeds, that leech-like, abstract the life from the soil and leave all else sickly and deteriorated. In these grounds, where cultivated, we scarcely saw a weed.

Passing from the strawberry department, we entered the nursery, where we saw many thousand very fine fruit trees—apple, pear, cherry, and plum, and all in as fine order and of as fine growth, as any we have seen this season. Several of the pear trees are in bearing. We observed a large plantation of the Oregon Raspberry, (the thimble-berry) but little or no fruit—*we are disappointed in this fruit* and do not think it worth cultivating, when compared with the noble Franconia. We noticed also, a fine lot of ornamental trees, though young, yet very valuable; among them were, the elm, ash, maple, horse-chestnut, willow, &c., all of very good growth.

We noticed upon one side of the mound, the proprietor had caused peas to be planted between the rows of trees. They shaded the young trees, and checked their growth, and thus they are nearly lost, for the check they received at first cannot be recovered. It is a very poor plan ever to plant vegetables or any thing between rows of fruit trees. It is certain they will cause great injury. Ground between fruit trees, should not be used for growing other crops. It cannot be done successfully.

We regretted the absence of the proprietor himself, but we were shown through the grounds attentively by Mr. Dawson, who has charge, and who seems familiar with his business and duties, and displays an interest in the place, most commendable. It is of the highest moment to all who have valuable grounds, that they should secure the services always of a proper person to take charge—one who can and will, feel an interest in the success of the undertaking. One great drawback to success in gardening and horticulture in California, has been the need of those in whom such a prominent pre-requisite was to be found; the mass of those engaged looking more to the amount received for services and the pur-

quisites they acquired, than to the success of their employers, or the work of their hands. There have been a few most honorable exceptions to this rule, but in the mass of cases it is too true.

The contiguity of the grounds of Mr. Sanford to the flat marshes, presents a fine opportunity for experiments with the asparagus and the plum tree, both of these being favorably affected by the saline properties of these marshy grounds.

We saw some very fine roses at Shell Mound, such as, 'Jean de Battailes, Davoricun's, Eliza Sauvage, Triumph d' Luxembourge, &c. We also noticed many curious Indian relics, such as arrow-heads, stone chisels, drills, ornaments of bone, &c., found at this mound. These were brought for us to look at, by the sprightly little daughter of Mr. Sandford, whose intelligence and amiable deportment gave us much pleasure. Miss Anna led us to several fruit trees, pointing out the fruit by name, and promptly distinguishing the varieties of strawberries by shape, color, &c. She showed an intuitive love and knowledge of this science (horticulture and flouriculture) that was most interesting, naming flowers, their habits, &c.

A large collection of domestic fowls, of all the varieties, numbering by hundreds, was seen within neat enclosures. We were gratified to note how promptly little Miss Anna, performed her pleasant task of calling the young chickens around her for their evening meal. They seemed to recognize the hand that fed them, which is more than many humans do—they *were* grateful.

We spent a few very pleasant hours at Shell Mound; and, after a bounteous repast, prepared for us within the cottage by the lady and daughter, greatly refreshed, we took our evening stroll from thence through Clinton, two and a half miles, to the city of oaks—Oakland.

MONSIEUR DONNET'S GARDEN.

It is gratifying to find new and increasing interest in horticulture. When at San Antonia we espied a neat plat of ground of about fifteen acres, a little distance from our route, and not wishing to pass it unseen, we made for it, and was much pleased to find an old acquaintance and friend as the proprietor, Mons. Bonnet, formerly of the Mission Dolores. Although this garden was very dry, we found a large collection of fruit and ornamental trees under cultivation. The proprietor was busily engaged budding trees, when we called, but promptly welcomed us, and showed us over his garden, pointing out many varieties of new and most valuable specimens. We noticed a large invoice of French fruit trees, just received. Even at this late season, Mons. B. was setting them out, and mulching them. Late as it is, we think with his care, they will be saved.

The collection of pears trees in this garden, numbers 77; apples, 60; ornamental about 50. We saw handsome specimens of fruit upon pear trees of the following kinds: Louis Bonne de Jersey, Bartlett, Vicar of Wakefield, English Bon Chretien, Beurre Diel, &c. Of apples, very beautiful specimens of Winter Colville, Prince, Reneitte 'd Canada, White Colville, Pippin, &c. For close application to business and constant industry and skill, Mons. B. deserves success.

CAMPBELL'S SMUT CLEANER.—That there are no evils that cannot be remedied, is clearly demonstrated by the invention to which we allude, for when the smut began to appear upon the grain crops of California, the farmer began to despair, and with reason too, for the labor of his hands seemed to be utterly lost. Among the many inventions which have been presented, (and there are many of a high character,) the one now noticed is worthy of high consideration, for it is the application of the principles of *chemical* more than mechanical science—plain and simple laws applied to remove an evil which a violation of the laws of nature have produced. During our visit to the "City of Oaks," we had a pleasant call at the residence of Mr. Campbell, now Mayor of Oakland, and learned from him the operation of his patent. We saw the "letters patent," just received from Washington, D. C., bearing the American eagle, thus granting to Mr. C. a protection to his right of invention, or rather discovery, as it should be called. Mr. Campbell will visit the valleys and practically test the importance and value of his patent, and we would hope our farmers may through his instrumentality now be able to save large quantities of grain that otherwise would have been lost—for by the evidence we received, it is most conclusive that every particle of smut and all impurities are completely removed from the grain

RUST AND SMUT IN SAN PABLO.—We have traversed miles up this road, and generally examined the fields. We shall soon, as promised at the Society Rooms, some of the many wheat. It was the theme of all related as to every [illegible] we walked through the fields.

The Steamer Queen City,

LEAVING the Levee City with the thermometer at 100°, it is indeed refreshing to enter the spacious saloons of this magnificent floating palace. A fine breeze, a good company, a gentlemanly Commander, polite and courteous Purser, attentive and respectful Steward and waiters—these add very much to a trip down river. That the Queen City has the finest saloon and sets the finest table on the Sacramento, there can be but one opinion, and we will say it, for it is true. Now we do not say that all the other boats do not set good tables—oh no. They set enough and good enough, for anybody; only the Queen City puts on the *extra touch*. Just as we are writing, we see the "Bill of Fare, of the Queen City, for to-day," and we are disposed to put it down in black and white, and see who can beat it:

CITIZEN'S LINE.
STEAMER QUEEN CITY,
CAPT. GEO. R. BARCLAY.

TABLE D'HOTE.

FISH.
Baked Cod, port wine sauce | Boiled Salmon.

BOILED.
Ham. | Tongue.
Corned Beef. | " a-la-mode.
Chicken, egg sauce. | Mutton, caper sauce.
A-la-mode Beef, cold slaugh.

ENTREES.
Lamb Chops, breaded. | Calves Head, turtle style.
Vol-au-vents, with oysters. | Fricaseed Chicken.
Stewed Duck, with olives.

ROAST.
Beef, Rough and Ready. | Pork.
Pig. | Lamb.

VEGETABLES.
Varieties of the season.

PUDDINGS.
Plum, white sauce.

CAKES.
Sponge. | Lemon.
Cream. | Ground.
Jelly. | Washington.
Boston Cream. | Little Plum.

PIES.
Fruit. | Puffs.
Ice Milk. Coffee.

PRESERVES.
Currant. Lemon. | Grapo.

JELLIES.
Calves Foot. | Charlotte Russe.
Blanc Mange. | Prune Marange.
Italian Cream. | Hartshorne, and others.

WINES, LIQUORS, &c.,
All kinds of Wines, Liquors, &c., of superior brands, to order.

The steamer Queen City leaves San Francisco every Tuesday, Thursday, and Saturday, at 4 o'clock, and leaves Sacramento every Sunday, Wednesday, and Friday.

Well, reader, what do you think of it? Excellent, *you* say. Well, it *reads* well, *we* say; and here we suspend our judgment, for as the "proof of the pudding is in the eating," we are now determined to wait till we *test that bill*—if good, we will say *aye;* if not, if upon trial we find anything wanting, then Mr. Steward you must expect squalls, for we are determined to call you to account. Here we lay down our pen till our judgment is satisfied—and our appetite too.

* * * * * Well Steward, we *are* satisfied—fully satisfied and content, and the first steamer we have the good fortune to own or be interested in, we bespeak the aid of Steward Collins as the chief of caterers for a splendid set out. It is no disparagement to any line or any boat, to speak thus flatteringly of the manner in which the "Table d'Hote" of the Queen City was arranged—for the Steward had the *materials* to work with, and he *knows how* to put them together. Every article named on the bill of fare was upon the table, with many more; and we know we can be sustained by about one hundred passengers when we say, a finer table or one arranged with more taste, or with more abundance, has never been upon a river boat. A beautiful satin banner was upon the centre of the table, bearing the name of the "Queen City," her commander, and the officers of the Company.

We have said thus much of this popular boat, but not in any feeling of invidious comparison, for we feel sure those who know our feelings know our partiality to our old favorite line, the "low pressures." As an "Eastern man" we prefer the "low pressure," and a better line of boats than the Steam Navigation Company's, cannot be found in Uncle Sam's dominions; and when we speak of commanders, officers, and stewards, of each and all—East, West, North or South may look in vain for their *betters*. Those who have traveled as many years as we have, and been as fully cognizant of facts, will also give testimony to our assertion. The Steam Navigation Company, with the brave old pioneer *Senator*, the splendid *New World*, the staunch and smooth-going *Confidence*, the fleet *Antelope*, and the pet *Wilson G. Hunt* with such commanders, mates, purers, stewards, &c.,—we say such a line cannot be excelled; and we do not say but that this line might, by a trial dinner, even beat the high pressures. We would like to see the trial; time can tell till they try. We have no objection to being one of the judges, as we are known to be in favor of [illegible]. We believe all of the causes of the success of our crack high pressure boats in their style of dinners arises from the fact that they prepare all on board, pastries, jellies, confections, &c.; "and it is so handy to have it in the house," as Mrs. Toodles says; and then Steward Collins *does* put up these matters fine—and the napkins too, and ice water in a hot day, and iced milk (thermometer at 100°)—really, to look upon *such* a table, we must give in. They will take the premium, for it is hard times; men are *so* constituted that they *do love a good dinner*.

So we write down—1st prize to Queen City, Capt. Barclay, for best Dinners—not forgetting Steward Collins' taste and style, nor the ever courteous Purser W. Welsh, Esq., whose attentions give a zest to appetite.

While we thus speak of a matter which affects only the inner man, we cannot let this opportunity pass without referring to the great liberality of both lines of steamers on all public occasions, in the conveyance of public men, and under every circumstance manifesting a desire to advance the general good. The recent offer of aid to the State Agricultural Society is an evidence of public spirit worthy of all praise, and should be met by a corresponding liberality on the part of the public. We beg to call attention to it in another column.

And now that we have finished most satisfactorily *our* dinner, with many kind thanks to the Queen City's officers for their courtesy, we leave the matter for the public to decide about the dinner that *is to be*, at the time of the STATE FAIR.

Public Spirit and Liberality.

As public journalists we feel proud to record the following acts of generous public spirit and great liberality, manifested toward the State Agricultural Society by the Steam Navigation Co., and the Citizens Line of steamers, and by the California Stage Co., together with the Express Co.'s, as recorded below in the letter of the President of the State Society.

This generous act on the part of our public conveyances, should awaken all who are interested, to great exertions to make the coming Fair what it can be made with due exertion; it is also due the owners of these lines that such an interest for this Fair should be awakened, that the increase of travel to the exhibition shall prove that such acts of liberality will be appreciated by a discerning community.

As the Steamboat Companies have most generously offered to convey persons necessarily required to go forward with stock and produce, there cannot now be any excuse for those who have valuable stock, dairies, &c., for not being prepared to send, as the greatest expense of such preparations will now be reduced. Every requisite preparation will be made for the exhibition of stock of all kinds. Suitable yards, buildings, and food, for stock will be prepared. Halls will also be fitted up for exhibiting the manufactures, works of art, mechanical ingenuity.—specimens of home industry—fruits, flowers, vegetables, grains, &c., and everything that contributors may send forward for the Fair. Specimens not perishable, can be forwarded now at any time by any of these conveyances, to the "State Society Rooms, Sac. City," and they will be received and prepared for exhibition.

It is earnestly hoped a universal interest will be manifested to make the approaching Fair not only publicly useful to the State, but that for days it will be a place of happy resort of all who look to the State's perpetuity.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells Fargo & Co., and the Pacific Express Co., have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanying the same.

Every thing of like liberality from our citizens, in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

C. I. HUTCHINSON, President.
SACRAMENTO, July 20th, 1857.

SACRAMENTO ILLUSTRATED.—We have received from the publishers copies of this interesting work, and find proofs of unusual interest in the early history of this favored city. Two engravings represent great events upon the levee. Knox & Baker the artists and [illegible] have done their work well. The history of Sacramento will be duly recorded, and they regard [illegible] engravings will be valuable and favorite [illegible]. We wish the work will be duly appreciated, and they rewarded [illegible]

A PLEASING INCIDENT.—Nothing is more gratifying than the exchange of those little courtesies which give life its sweetest taste. Among the passengers upon the Queen City, on Sunday last, were C. P. Duane, Esq., Chief Engineer of the San Francisco Fire Department, and C. E. Buckingham, Esq.; together with several of the officers and other gentlemen from that city, who had remained for a few days as the guests of the Sacramento Department. On their leaving this city they were attended by a large number of the Sacramento members to the boat, and at parting were cheered on their way home. We like such courtesies, *they unite men*, they encourage men to do good, to aim to be good citizens, and to labor for the public weal. As an evidence of this we see the approbation bestowed upon the "Confidence men," of Sacramento city, and the "Yuba men," of Marysville, who were the guests at San Francisco. These courtesies and reciprocal attentions awaken the higher feelings of man and bid him resolve to do—*to do well;* and we hope there will ever be exhibited among all the members of the fire department of the Pacific coast, a high, noble and generous strife to excel in acts of courtesy, courage and noble deeds. Never may we see aught like what has been seen in many of our Eastern cities. We believe we can speak safely upon this point; for our firemen have always courted the good will and friendship of each other. The recent noble efforts of the Sacramento fire companies at the fires on K and on I streets, give a proof that they are the protectors and safeguards of our city: a band of as noble, daring and brave men as can be found the world over; and our prayer is that they may be successful in all their efforts against our common enemy, and escape from danger themselves.

ENGLISH POTATOES.—Judge Musgrave was in New York a few days since, when a cargo of potatoes was landed, just from Liverpool. He bought a barrel for $10, for seed. The Judge's fine farm will, we hope, yield him some big potatoes, and many in a hill next fall. We are promised a taste of them. Send them by express, Judge!—*Vt. Country Farmer.*

Potatoes from England! Who would believe that such an event could have ever occurred among our down-easters. A few years since the market was glutted with potatoes, at twenty-five cents per bushel, and now English gardeners come to Boston or New York and bring a cargo of potatoes, and receive *only ten dollars per barrel, simply four dollars a bushel.* Would not California like to get such a price? Whoever wishes to ship potatoes to New York can do so with safety by means of the Patent Kiln Dryer just invented and now offered in this State.—ED.

PROLIFIC SHEEP.—In our rambles over San Pablo Valley we met with a Mr. Shipley, who stated to us that recently, of an afternoon, calling upon a friend who was shearing sheep, he gave a helping hand, and that between 4 P. M. and sunset, he sheared *eleven sheep*, with heavy fleeces; among the flock were *two ewes* that had *five lambs each*. They were of the Flat Tailed Asiatic species, the variety that was introduced into Napa Valley some time since by Capt. Ritchie. Mr. S. informed us that this species is improving, and that a pair of this flock was recently sold for $100. He also informed us that, *verily*, one of the tails of these sheep would weigh ten pounds. A noble specimen of these sheep will be on exhibition at the State Fair.

DECAY OF THE GRAPE VINE IN FOREIGN COUNTRIES.—By all the information received from Europe in the last advices, the disease manifested in former years has again appeared in Spain and Portugal and even assumes a more serious aspect. Some old vine growers fear a total extinction of their vineyards. It should not be forgotten by vine growers in California, that from indications in past years, in many of the oldest and best vineyards in the Old World it is feared that the vine will die out, and we have urged again and again attention to an [illegible] of the cultivation of the Vine early year in California.

PLANTING OF TREES IN OAKLAND.—It [illegible] to the [illegible] have planted [illegible] upon the city, as found at the ranch of Mr. [illegible] on the San Pablo road [illegible] was pruning the young [illegible] trees of the [illegible]. This is surely evident that the [illegible] there and in the [illegible] at large [illegible]

Horticultural Department.

The Strawberry.

A GENTLEMAN of my acquaintance, with his wife, after having spent the winter in New Orleans, and having been feasting on strawberries two or three weeks, left for the North, and passed up the Mississippi, and the Ohio to Cincinnati, eating freely of this delicious fruit, all the way. He stopped at the queen city a few days, and came on to Boston. Here he found it just coming into the market. What can be more refreshing or more grateful to the traveler, on such a journey, or contribute more to make him forget the fatigues and annoyances attendant upon it, than the cooling, fragrant, healthy strawberry. Perhaps there is no fruit so extensively found over the surface of the globe, as this. It is found from Hudson's Bay to Terra del Fuego. It creeps from the lowest valleys up the sides of the most rugged mountains to their very summits. It winds its way along the water courses, sprinkling their banks with pearly flowers and scarlet fruit. It creeps over the meadows and prairies, checkering their surface with its beautiful foliage and fair flowers. In the old world it extends from Kamschatka to Spain, and upon the declivities of the Himalayas and the Alps, it opens its modest flowers along the edge of the melting snows. It retains its vitality under drifts of snow a hundred feet deep, in the mountain gorges, and resists the cold which splits the gnarled oak and the solid rock. From the joints of its runners, roots shoot into the earth. Its tiny seeds germinate in the soil upon which they fall. The birds scatter them through the forests, and carry them to islands of the sea. The breezes, freighted with the downy pollen of the male plants, deposit it upon the viscous summits of the buds of the female flowers, quickening them into new life and causing them to swell into juicy and delicious morsels. They need no hand of man to plant them, for nature, everywhere present, ever active, and ever watchful over her progeny, has provided better and surer means for their propagation. When Downing said that "the strawberry properly belongs to the cold climate," he had not thought of its wonderful power of adapting itself to various climates and soils and situations. What markets are better supplied with this fruit than Baltimore, Charleston and New Orleans? Where does it thrive more vigorously than on the steppes of Mexico? Indeed in the sunny south, where it meets with a sufficient supply of moisture either in the shape of dew or rain, or in the soil upon the borders of streams, it continues to yield successive crops of berries, four six and even eight months in the year. While in the north, with the best cultivation, it yields its fruit scarcely as many weeks.

The cultivator should understand that there are three kinds of plants, the male, the female and the hermaphrodite, or double-sexed. The male plants are usually larger and stronger than the female. Their flower stems are longer, and their flowers larger and more showy. But the male or staminate flowers never bear fruit. Their office is to furnish pollen, which is a light feathery powder, which falls upon the female or pistillate flowers. The buds or unopened calyxes of these latter flowers are covered with a gummy or adhesive substance which retains the pollen which falls upon them, and thus secures the impregnation of the flower. The hermaphrodite plants can impregnate their own flowers, and those of other pistillate plants. In setting a strawberry bed these facts should not be forgotten, but plants of both sexes should be duly interspersed throughout the bed. One male plant is found sufficient for six or seven female plants, and they should be intermixed in about that proportion. The hermaphrodite often produces good fruit, but is not thought so sure a bearer, as the true pistillate. The character of the fruit seems to depend on the female plants. For instance, if the pistillate plants of Hovey's seedling are impregnated by the pollen of the early scarlet, the fruit is apparently the same in size and color and flavor, as though it had been impregnated by pollen from the staminate plant of its own variety. Hence the male plants of the early scarlet which is a strong grower and continuous bloomer, are preferred by some cultivators for this purpose. A sandy loam, plowed deeply, and made rich with vegetable manures, will yield the finest and largest quantity of fruit. A heavier soil, and animal manure will yield large vines and more foliage. Meadow mud, decayed leaves, sawdust, hay or straw cut fine and spread freely over the ground in the autumn, after the runners have been cut off with the hoo or spade, are the best manures for the strawberry, and at the same time answer for mulching, by which the roots are protected from the scalding sun, and the fruit kept clean. The secret by which the plants are kept in continuous bearing for many weeks, appears to be the daily use of the watering pot garden engine. The kind of manure referred to, retains the water, and keeps the soil constantly moist. Sifting wood ashes over the vines early in the spring, applying it freely to the soil, will amply repay the labor and expense.—*R., in the Country Journal.*

We publish the above interesting article upon the Strawberry, containing many good ideas and scientific truths correctly stated; and, if practically applied, would secure to our growers a better reward for their labors. The writer found pleasure in this delicious fruit, and felt it a privilege to enjoy it so long a season—traveling from South to North, and keeping all the time in the seasons of this fruit. Had he but traveled a little farther and visited California, he would have been gratified with this fruit from May to November, and from the same plantation and vines, too. Thus much can we say for California: no portion of the world can surpass us, no, nor equal us in the quantity, quality or size that can be raised upon a single acre. We challenge the world to a contest. If the correspondent of the Country Journal will come to us, we will prove it.

North Carolina State Agricultural Fair.

By the Carolina Cultivator, we find that great preparations are making for the State Fair which is to be holden at Raleigh, N. C., on the 16th, 17th, 18th and 19th, of October next. The list of premiums, embrace five branches or departments, as follows:

The first includes every discription of animals yet domesticated. The second, grains, fruits, vegetables, dairies, preserved meats of all kinds, fish, all manufactured foods of every name and nature, classed under the head of "food and condiments," (where is the Wide West?) except "pepper and salt." The third, the mechanic arts through all their wide extent, embracing every branch of domestic manufactures, agricultural implements, cabinet work, shoes, hats, clothing, &c. The fourth, manufactures of woolen, linen, and cotton, or all mill fabrics. The fifth, experimental farming, such as plowing, various modes of cultivation of the soil, manures, food for stock, value of manures, essays upon improving soils, mineral substances, collections of minerals, &c., household fabrics of every kind.

To this very large and extensive list, presenting as it does the preparatory work for a Grand Industrial Exhibition of the State, we find connected a list of rules and regulations so thorough and complete that we publish them entire, that they may serve as assistance to all the counties of our State in their preparatory work for the guidance of committees in each department. However numerous these rules, they are of the utmost importance to the conducting of such public enterprises, and when duly observed, the whole machinery moves on as smoothly and regularly as the chronometer; but when disregarded, "confusion worse confounded," is the inevitable result:

RULES AND REGULATIONS OF THE FAIR.

1. All members of the N. C. State Agricultural Society, will be furnished with a badge of membership, upon payment of the annual tax of $3, and will be required to wear the same during the Fair. This badge will admit the ladies of his family and children under fifteen years of age.

2. Members of the Society and their families alone will be admitted on Tuesday, the day for examination and awards by the judges. All competitors are expected to be present. The public will be admitted on and after Wednesday, at 10 o'clock. Price of admission, 25 cents. Children and servants, 12 1-2 cents. Clergymen, Editors, and Pupils of charitable Institutions, admitted free.

3. Agricultural Societies and Institutions from other States, are invited to send Delegates. Such Delegates will be presented with a complimentary card.

4. All Exhibitors who intend to compete for the Premiums of the Society, must become members of the same, and have their articles on the ground and entered at the Secretary's Office, in Reception Hall, at or before 5 o'clock on Monday evening, Oct. 15th, without fail, so that they may be arranged in their respective departments, and in readiness for examination by the Judges on Tuesday morning at 10 o'clock.

5. The regulations of the Society must be strictly observed by exhibitors, otherwise the Society will not be responsible for the omission of any article or animal not entered under its rules.

6. No article or animal entered for a premium, can be removed or taken away before the close of the Exhibition. No premium will be paid on articles or animals removed in violation of this rule.

7. All articles and animals entered for exhibition, must have cards attached, with the number as entered at the Secretary's Office; and exhibitors in all cases must obtain their cards previous to placing their articles or animals on the Fair grounds.

8. Those who wish to offer animals or articles for sale during the Fair, must notify the Secretary of such intention at the time of entry.

9. The Executive Committee will use every precaution in their power, for the safe preservation of all articles and stock on exhibition, and will be responsible only for loss or damage that may occur during the Fair. Exhibitors must give attention to their articles or animals during the Fair, and at the close of the Exhibition, attend to their removal.

10. The Awarding Committees or Judges, selected for the next Fair, are earnestly requested to report themselves to the Chairman of the Executive Committee at Reception Hall, upon the grounds of the Society, on Tuesday morning, the 16th day of October, 1855.

11. In no case can the Judges award special or discretionary premiums; but will commend to the Executive Committee any articles in their class which they may deem worthy of special notice and for which a premium has not been offered.

12. The Judges on animals, will have regard to the symmetry, early maturing, thorough breeding, and characteristics of the breeds which they judge. They will make proper allowances for the age, feeding and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

13. No stock of inferior quality, will be admitted within the grounds; a committee will be appointed to rule out all below a medium grade.

14. Animals to whom premiums have been awarded, must be paraded around the track, that visitors may see the prize animals.

15. No person will be allowed to interfere with the Judges during their adjudications.

16. The several Superintending Committees will give particular direction to all articles in their departments, and see that all are arranged in the best order possible to lessen and facilitate the labors of the Judges in their examination.

17. The Superintendents will attend each set of Judges in their respective departments and point out the different articles or animals to be examined, will attach prize cards to the articles, of flags to the successful animals after the Judges' reports have been made up and delivered to the Chairman of the Executive Committee.

18. The Judges will withhold premiums on animals or articles in their opinion not worthy; though there be no competition.

19. Animal having received premiums of the Society at previous exhibitions, will not be allowed to compete for prizes again in the same class.

20. Stock brought to the Fair for sale, will have an enclosed lot adjoining the Fair grounds assigned them, with water convenient, where they can be kept at the expense of the owner.

21. Articles manufactured in the State, when brought in competition with foreign articles, will take precedence, other things being equal, and the foreign article be entitled to a second premium.

22. No vehicles or horsemen, will be allowed entrance on the Fair grounds, except the private carriage or horses of members, through the private gate.

23. The Chief Marshal, with efficient aids, will be in attendance during the hours of exhibition to keep proper order.

24. No exhibiter will be permitted to enter more than one animal in each of the sub-classes.

25. Animals, when duly entered, are well provided for by the Society, without charge to owner, and cannot be removed from the grounds, except by permission of the Executive Committee.

26. All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignors, to, or for whom, only premiums for such articles will be awarded.

27. Every machine or implement offered for a premium, must be so designated or described, as will serve to identify it to future purchasers, and also the selling price of the article must be stated and marked on the labels and in the published reports of premium articles.

28. Efficiency, cheapness, and durability, will be regarded as chief excellencies in every machine or implement.

29. The Chief Marshal will call the Judges at 10 o'clock on Tuesday morning—assemble them at his tent on the grounds—furnish them with the printed list of premiums, also with blank books in which to register their awards, and have the Judges conducted by the Assistant Marshals, to their respective departments of the Exhibition.

30. The Marshal and his Aids, shall give particular attention to the proper arrangement of all articles exhibited, in their respective departments; point out the articles or animals, to the Judges, and otherwise facilitate the examination by the Judges.

31. The track will be open for the trial of harness and saddle horses, every day during the Fair.

32. A band of music will be in attendance each day, during the hours of exhibition.

33. An efficient police will take charge of the grounds during the night.

The Grasshopper.

NOT having had room for all we desired to publish on this subject last week, we give below some additional extracts. We would call especial attention to the article of "Agricola" in this week's issue, relative to this destructive insect. It is worthy an attentive perusal. We are more and more convinced our theory is correct respecting shade and moisture, deep plowing and constant cultivation; and we are also gratified to know from so experienced a mind as Agricola that our position is based upon scientific truth.

In speaking of the brown locust, "Goldsmith's Animated Nature" says:

"The shield that covers the back is greenish, and the upper side of the body brown, spotted with black, and the under side purple. The upper wings are brown, with small dusky spots, with one larger at the tips. The under wings are more transparent and of a light brown, tinctured with green; but there is a dark cloud of spots near the tips. This is that insect that has threatened us often with its visitations, and that is so truly terrible in the countries where it is bred. *There is no animal in the creation that multiplies so fast as these, if the sun be warm and the soil in which their eggs are deposited be dry.* The scripture, which was written in a country where the locust made a distinguished feature in the picture of nature, has given us several very striking images of this animal's numbers and rapacity. It compares an army, where the numbers are almost infinite, to a swarm of locusts; it describes them as arising out of the earth where they are produced, as pursuing a settled march to destroy the fruits of the earth and co-operate with Divine indignation.

In the year 1690, a cloud of locusts was seen to enter Russia in three different places, and from thence to spread themselves over Poland and Lithuania, in such astonishing multitudes, that the air was darkened and the earth covered with their numbers. *In some places they were seen lying dead, heaped upon each other four feet deep.* In others they covered the surface like a black cloth; the trees bent beneath their weight, and the damage the country sustained exceeded computation. In Barbary their numbers are formidable and their visits are frequent. In the year 1724, Dr. Shaw was a witness in that country of their devastation. Their first appearance was about the latter end of March, when the wind had been southerly for some time. In the beginning of April their numbers were so vastly increased, that in the heat of the day they formed themselves into large swarms which appeared like clouds, and darkened the sun.

In the middle of May they began to disappear, retiring into the plains to deposit their eggs. In the next month, being June, the young brood began to make their appearance, forming many compact bodies of several hundred yards square, which afterwards marches forward, climbing the trees, walks and houses, eating everything that was green in their way. The inhabitants, to stop their progress, laid trenches all over their fields and gardens, filling them with water. Some placed large quantities of heath, stubble and such like combustible matter in rows, and set them on fire, on the approach of the locusts. But all this was to no purpose, for the trenches were quickly filled up and the fires put out by the vast number of swarms that succeeded each other. A day or two after one of these was in motion, others that were just hatched came to glean after them, gnawing off the young branches and the very bark of the trees. Having lived nearly a month in this manner, they arrived at their full growth and threw off their worm-like state by casting their skins. To prepare themselves for this change they fixed their hinder feet to some bush, or twig, or corner of a stone, when immediately by an undulating motion used on this occasion, their heads would appear and soon after the rest of their bodies. The whole transformation was performed in seven or eight minutes time, after which they were a little while in a languishing condition; but as soon as the sun and air had hardened their wings and dried up the moisture that remained after casting of their sloughs, they returned again to their former greediness with an addition both of strength and agility. But they did not continue long in this state before they were entirely dispersed. After laying their eggs and directing their course northward, they probably perished in the sea. It is said that the holes these animals make to deposit their eggs in are four feet deep in the ground. The eggs are about four score in number, of the size of caraway comfits, and bundled up together in clusters."

In the American Encyclopedia, we find the following curious facts:

"There is a locust in Tonquin, about the bigness of the top of a man's finger, and as long as the first joint. It breeds in the earth in low grounds, and in the months of January and February, which is the season for taking them. They issue from the earth in vast swarms. At first they can hardly fly, so that they often fall into the rivers in great numbers; however, the natives in these months watch the rivers, and take them up in multitudes in small nets. They either eat them fresh broiled on the coals, or pickle them for keeping. They are considered as a great delicacy in that part of the world, as well by the rich as the poor. In the countries where they are eaten, they are regularly brought to market and sold, as larks or quails in Europe. They must have been a common food with the Jews, as Moses, in the Book of Leviticus, permits them to eat four different kinds of this animal, which he takes care to specify. This dish, however, has not yet made its way into the kitchens of the luxurious in Europe, and though we may admire the delicacies of the East, we are as yet happily deprived of the power of imitation."

J. M. HORNER, Esq., in a communication to the San Francisco Chronicle, suggests the following in relation to the grasshopper visitation:

I. Grasshoppers are not produced on cultivated land.

II. I have not yet ascertained whether they have any instinctive faculty to guide them to food, if the same be at a distance. On the contrary, they float with the wind. If there be no wind, they will spring into the air and move perhaps a few rods ahead; next, they will spring to the right; then, back; then, to the left; and so on. Throughout their active hours, they will move to every point of the compass, and perhaps stop at night within a few feet of their birth-place.

III. They move upon the wing only a few hours each day; and during those hours they eat nothing. After they become still, they commit their depredations.

IV. They seldom do any damage after they are full grown. In fact they eat only during a few days.

REMEDIES:—1st. The best practical method to protect one's crop is, to cultivate all the adjoining land with grain, or other crops, sufficiently early, in order that it may mature before the grasshoppers make their appearance. This alone, will lessen the number of insects, and will leave them at a distance from the green crops.

2d. On the windward side of the crops, or, if there be no windward side, then on all sides, sow

a strip of late grain, or something else, expressly for the grasshoppers. Sow in May, and in such a way that it will be sure to grow after the grasshoppers have done with it. It will do for late pasture.

3d. Small gardens have been protected by driving the grasshoppers out every evening about the times they commence to eat. This can be done by two boys taking hold of the ends of a long rope and dragging it over the garden, thereby causing the insects to hop before it.

I do not say that the above are the best plans of protection, but they are the most effective which I have yet seen tried. Many other items in relation to this matter, could be mentioned; but I have been always objected to on account of the length of my newspaper articles, I will therefore conclude here.

Miscellany.

[For the California Farmer.]

LINES ADDRESSED TO ROVING JACK.

Why did you roam
So far from home?
Why spend thy precious hours
In California's enchanted bowers
Why part from friends you loved of old,
To gather a pile of wasting gold?
Then come back, come back,
Poor Roving Jack.

Have you gone from home,
To wander alone?
A father's counsel goes with thee;
A mother's prayer is over the thee;
And with a tear in her gentle eye,
She often sighs you'll come by-and-by.
Then come back, come back,
Poor Roving Jack.

By your musings I see
You're light-hearted and free:
Does not memory, faithful and true,
Bring home and loved ones to view,
And the zephyr of a sunny clime,
Whisper thee of "Auld Lang Syne."
Than come back, come back,
Poor Roving Jack.

ROSE MAY.

LIFE.

BY A PUPIL AT BENICIA SEMINARY.

And what is life? Oh! know ye not?
'Tis like the sparkling waters gay,
When on the rocks they freely dash,
Upon a bright and sunny day.

And o'er the waters' dashing foam
Doth sport a boat so light and gay,
It quivers on the waters dark,
And o'er it flies the whitening spray.

Before it roars a cataract:
It hovers lightly on its brink—
Oh! can so fair, so frail a thing—
Oh! can it thus in darkness sink?

A moment thus it stands transfixed,
And then the waters flying o'er,
That which was once so pure and fair,
Is lost amid the deafening roar.

And such is life! our bark so frail,
Is sporting o'er life's mighty sea;
But soon it gains the waters' brink,
And sinks into eternity.

THE WORKS OF GOD.

BY A PUPIL AT BENICIA SEMINARY.

'Tis sunset hour: behind the western hills
Is sinking fast, the glorious orb of day;
His last gleam falling on the placid rills—
To other realms he's wending fast his way.

'Tis evening hour: the crescent moon is here;
Her beams of love are falling from the sky,
While twinkling stars around her throne appear
Like gleams of mercy from God's throne on high.

'Tis morning hour: the violet wakes from its sleep,
It seems an angel's, from the realms above;
And when from out its bed its blue bells peep,
It shows God's mercy and his boundless love.

GROUNDS ABOUT A CHINESE TEMPLE.—The following description of a Chinese garden scene is from the pen of Capt. Granville Loch. The temple is at Wu-sung, near Shanghai:

"In the center of a serpentine sheet of water, there is a rocky Island, and on it a large temple, of two stories, fitted up for the accommodation of the wealthy public. Pillars of carved wood support the roof; fretted groups of uncouth figures till up the narrow spaces; while moveable lattice blinds screen the occupants from the warmth of the noonday sun. Nothing can surpass the beauty and truth to nature of the most minutely carved flowers and insects prodigally scattered over every screen and cornice. This is the central and largest temple. A number of other light aerial looking structures of the same form are perched upon the corners of artificial rocky precipices, and upon odd little islands. Light and fanciful wooden bridges connect most of these islands, and are thrown across the arms of the serpentine waters, so that each sequestered spot can be visited in turn. At a certain passage of the [illegible] temple is shaded in front by a rocky em[illegible], the large masses of which are connected with great art and propriety of taste, but in shape and adjustment most studiously grotesque. Trees and flowers, and tufts of grass, are sown and planted, whose art must have been taxed to the utmost to procure this adjustment.

In another part of the garden there is a miniature wood of dwarf trees [illegible] a small artificial water-fall; the leaves, fruit and blossoms of the trees are in proportion to their size. This miniature wood is said to be the result of the most assiduous care and patient watching. A small branch of a forest tree is deprived of a ring of bark, and the bare place covered round with prepared unctuous earth; this is kept moist, and when the radicals have pushed into the loam, the branch is separated from the tree and planted in a trough or porcelain flower pot. The pot is then filled with bog earth, manure and clay, and water is applied according to the necessity of the plant. The branches are repressed by cutting and burning, and bent into shapes resembling an old forest tree; and even to the roughness of the bark and hollow knots of pruned and decayed branches, they are complete in resemblance. The roughness is produced by ants, attracted by smearing the bark with sweet substances.

Torturous pathways lead to the top of the artificial mountain, each turning formed with studied art to surprise and charm, by offering at every point fresh views and objects. Flowers and creepers sprout out from crevices; trees hang over the jutting crags; small pavilions, crested with the white stork, their emblem of purity, are seen from almost every vista, while grottoes and rocky recesses, shady bowers and labyrinths, are placed to trap the unwary, each with an appropriate motto, one inviting the wanderer to repose, another offering quiet and seclusion to the contemplative philosopher."

A HUGE PILE OF SERPENTS.—In the Savannas of Izacubo, Guiana, I saw the most wonderful and terrible spectacle that can be seen; and although it be not uncommon to the natives, no traveler has ever mentioned it. We were ten men on horseback, two of whom took the lead, in order to sound the passage, while I preferred to skirt the great forest. One of the men who formed the vanguard, returned at full gallop, and called to me—"Here, sir, come and see the serpents in a pile." He pointed to something elevated in the middle of the savanna or swamp, which appeared like a bundle of arms. One of my company said, "This is certainly one of the assemblies of serpents which heap themselves on each other after a violent tempest. I have heard of these, but never saw any; let us proceed cautiously, and not go too near them." When we were within twenty paces, the terror of our horses prevented our approaching nearer, to which none of us were inclined. On a sudden, the pyramid mass became agitated; a horrid hissing issued from it, thousands of serpents rolled spirally on each other, and shot forth out of the circle, their envenomed darts and fiery eyes to us. I own I was the first to draw back, but when I saw this formidable phalanx remain at its post, and appear to be more disposed to defend itself than attack us, I rode around in order to view its order of battle, which faced the enemy on every side. I then thought what could be design of this assemblage; and I concluded that this species of serpent dreaded some colossal enemy, which might be the great serpent or caiman, and they re-unite themselves after seeing him, so as to resist the enemy in a mass.—*Baron Humboldt.*

At a time like the present, when the contraction of national debts is becoming general, the following statement of the debts by the principal States in the world, corrected up to a late period, is of some interest. It is contained in Ayre's edition of "Fenn on the English and Foreign Funds," recently issued:—Austria, amount of debt, £211,000,000; Baden, £7,000,000; Bavaria, £14,117,000; Belgium, £26,000,000; Bolivia, £521,000; Brazil, £12,392,000; Buenos Ayres, £2,500,000; Chili, £1,784,000; Columbia, £6,625,950; Cuba, £311,230; Denmark, £13,000; Ecuador, £3,817,000; England, £773,923,000; France, £233,000,000; Granada, (New,) £7,500,000; Greece, £8,250,000; Guatemala, £594,500; Hamburg, £4,000,000; Hanover, £5,174,000; Holland £102,451,000; India, (British), £48,000,000; Mexico, £10,000,000; Peru, £9,953,800; Portugal, £19,122,000; Prussia, £33,500,000; Roman States, £17,152,000; Russia, £68,000,000; Sardinia, £23,000,000; Saxony, £6,223,000; Spain, £70,000,000; Sweden, £453,000; Switzerland, £160,000; Turkey, £5,000,000; United States of America, (Federal,) £10,000,000; Venezuela, £3,789,000; Wurtemburg, £4,850,000; grand total, £1,736,229,550.

ABOLITION OF THE NEWSPAPER STAMP DUTY IN ENGLAND.—The London Illustrated News says, that in consequence of the Government bill on the newspaper stamp question having been carried, the stamp on newspapers will, in future, be *optional*. Those who desire a cheap press, may have it cheapened to the extent of the virtually abolished stamp duty; but without the privilege of transmission and re-transmission by post. Those to whom the postal privilege is essential, will find the alteration of the law has produced no considerable change, and that almost the only result of the measure is the much-needed disappearance of a great scandal—a law which it was impossible or inexpedient to enforce, and which was daily and weekly set at defiance in every part of the country. The News proposes, so soon as the act goes into operation, to issue regularly a double number at the old price of a single one, viz.: sixpence (twelve cents.)

WASHINGTON MONUMENT.—The Washington Monument Society, has issued an address calling upon the patriotic to contribute funds for the great undertaking. The estimated cost is $1,[illegible]. The amount already expended is $[illegible], leaving the sum of $[illegible] yet wanting.

WOMAN [illegible]: Let us [illegible] try to render them perfect. The more they are [illegible]ed, the more [illegible] of the duties of women, depends the welfare of man.

Ladies' Department.

[For the California Farmer.]

Rural Lays—No. 4.

ORDER OF BREAKFAST.

WHERE is the farming man who cannot tell
The pleasant jingling of the breakfast bell?
If learned men, in lofty verse, have told
How "drowsy tinklings lull the distant fold;"
And how enrapt, at summer evening's close,
We love to listen to the bells on cows:
'Tis very well for such who lie a-bed
Till nearly noon, to dream of drowsy-head,
And talk as if, like them, the very bells
Were fit to send asleep, and nothing else.
When John proclaims to us the welcome hour,
How briskly all our lads around him pour!
All thronging in, as hurriedly and fast,
As if they played at "Satan take the last!"
My Uncle, smart and ready with the rest,
Assumes the place and rank which suits him best.
A monarch he, whose military law
And dread behests the whole of us o'er-awe;
No rule but this, which by himself was made:—
"An order given must strictly be obeyed."
But still as good a soul, and soft, and kind,
As rankest democrat would wish to find.
So he presides, I seated at his right,
While John and Dinah, cleanly washed and bright,
Wait on our wants, and speedily re-fill
The empty tea-cups, or, with pliant will,
Hand up and down, and round, each several plate,
With pomp peculiar unto all who wait.
Our fifteen farming lads, in separate rows,
With I, and Uncle, generally compose
The whole at board; but, when some city friend
Comes here, with us a holiday to spend;
Or country farmer, early on the way,
To catch my uncle on a market day,
Comes round to Martinfield (our homestead's name),
They sit with us, and with the boys the same;
Only the strangers always we exalt,
To sit between my uncle and the salt.*

BETTY MARTIN.

* [Betty and her uncle, it appears, follow the customs of the olden time. The privilege of sitting above the salt was, among our simple forefathers in England, a mark of deference and distinction due to gentility and rank. In Scotland, the *dii majorum gentium* occupied a raised *dais*, about a foot higher than the rest of the company.—ED.]

Home Pleasures—Duty of Mothers.

IT should be the welcome privilege and dear delight of every mother, to make home the happiest resting place, and the centre of joyousness, to the youthful hearts entrusted to her keeping. It should be her studied effort to win and secure their confidence and ardent affection, that they may feel there is no heaven or refuge and consolation in their childhood's sorrow like unto a mother's sympathizing breast—no heart that participates so fully in the joys of their gladsome hours—and no spot that beams so bright as that beside the domestic hearth, guarded by her watchfulness and love.

The mother should cheerfully interest herself in the sports and amusements of her children, and lend her aid in aught that contributes to their happiness and innocent entertainment, as far as is consistent with her cares and duties,—and should make any sacrifice or denial on her own part, rather than that they should feel uncared for, unloved, or a burden on her time and attention. They should be made to realize that they are cherished within her "heart of hearts," and that their comfort and well-being, are the objects of her daily solicitude, the main-spring of all her acts. Thus feeling, they will have little or no desire for resorts of pleasure beyond the fireside; and as they advance in age, will be protected in a great measure from the temptations of the world and out-door life, and in long after years will look back upon the mother's tenderness as the safeguard from many sins. And if that mother should have gone to rest, there will be a halo round her memory that will light them on through many a darksome path, incite them on to many good deeds, and keep them free from vice. Let it, therefore, be the pleasant task of the mother to keep the sunny brow of childhood undimmed as far as lies within her power, for clouds will come full soon enough to darken o'er their sky.

We can imagine no sadder scene, no greater object of pity, than a neglected, lonely child, uncheered by caressing kiss or approving smile, from its cold, disinterested mother.

FOR THE BENEFIT OF ANTI-ANT.—We give you a sure remedy. Procure a large sponge, wash it well, press it very dry; by so doing, it will leave the small cells open; lay it on the shelf where they are most troublesome sprinkle some fine white sugar on the sponge, (lightly over it;) two or three times a day, take a bucket of hot water to where the sponge is, carefully drop the sponge in the scalding water, and you will slay them by the thousands, and soon rid the house of those troublesome insects. Yours truly, J. J.

P. S.—When you squeeze the sponge you will be astonished at the number that had gone in the cells.—*Phil. Ledger.*

A CONTENTED WIFE.—It is a [illegible] thing for a poor man to have a [illegible], loving wife—one who will not wish to live in a style beyond her husband's means, just because her next door neighbor does—one who can be happy in the love of her husband, her home, and its comforts, without asking the world for its smiles or its favors.

[illegible]

[For the California Farmer.]

A Fragment.

For days and weeks, had we watched over our dear Rosa, as she was gradually fading from earth. There was something painfully beautiful in her leave-taking. So fair, so young, so gentle, and affectionate, full of hopes and bright anticipations; the only daughter of her mother, and she a widow, thus at the close of her seventeenth summer to be laid aside, and in the quietude of her sick room, to prepare for her new and only home, was painful. 'Twas sad indeed, to think that one so essential to the happiness of her mother and brother, should be taken from them. That she, who was best fitted to enjoy this life, who had only found roses in her path and no thorns, must be translated to a world that she knew not of. It was a sublime sight to see her, so calmly, cheerfully, prepare for that new life. Every day as she grew weaker, she bade farewell to one loved object after another, and spoke her last word to some dear friend. Never shall I forget her mournful look, as she handed me the last letter she ever wrote, and the calmness with which she said, "I shall never write again."

Daily she grew weaker, but more beautiful, till her countenance appeared heaven-lit, and the lustre of her large blue eyes, seemed borrowed from the azure skies. Often did I feel, as she spoke those calm, quiet words of consolation, yet full of affection, to her mother and brother, that she was too pure, too holy, for earth.

The last night came, and with it the last leave-taking! With her hand clasped in her brother's, and the words, "Oh! brother!" dying on her lips, her spirit winged its way.

Beautiful was her departure, but what agony did it bring to her friends! That brother, who had been so cheerful for his sister's sake, could restrain the pent-up grief no longer, and crying, "Oh Mother! she is gone!" he threw himself upon the sofa and lay speechless for hours. 'Twas terrible to see the strong man trembling and groaning with agony, while the feeble mother bent over him in anguish, fearing that he too would be taken away.

That night is past with all its agony. The grief of the brother is over, and though the mother soon joined the sister in the spirit land, yet his countenance is cheerful, as if no shadow ever swept o'er his heart. Such is the power of the human soul. It can outlive all suffering, and rise above all sorrow.

The Wife's Influence.

A woman has her husband's fortune in her power, because she may or may not conform to his circumstances. This is her first duty, and it ought to be her pride. No passion for ease or display ought to tempt her for a moment to deviate in the least degree from this line of conduct. She will find her respectability in it. Any other course is wretchedness itself, and inevitably leads to ruin. Nothing can be more miserable, than the struggle to keep up appearances. If it could succeed, it would cost more than it is worth; as it never can, its failure involves the deepest mortification.

Some of the sublimest exhibitions of human virtue have been made by women who have been precipitated suddenly from wealth and splendor to absolute want. Then, a man's fortunes are in a manner in the hands of his wife, inasmuch as his own power of exertion depends upon her. His moral strength is inconceivably increased by her sympathy, her counsel, her aid. She can aid him much by relieving him of every care which she is capable of taking upon herself. His own employments are usually such as to require his whole time and his whole mind.

A good wife will never suffer her husband's attention to be distracted by details to which her own time and talents are adequate. If she be prompted by true affection and good sense, she will perceive when his spirits are borne down and overwhelmed; she, of all human beings, can best minister to its needs. For the sick soul, her nursing is quite as sovereign as it is for corporeal ills. If it be weary, in her assiduity it finds repose and refreshment. If it be harrassed and worn to a morbid irritability, her gentle tones steal over it with a soothing more potent than the most exquisite music. If every enterprise be dead, her patience and fortitude have the power to re-kindle them in the heart, and be again goes forth to renew the encounter with the [illegible]s and troubles of life.

OTTO OF R[illegible].—In the journal of a British officer, we find the following [illegible] of otto of roses produced in Cashmere: "It takes five hundred weight of rose [illegible] to produce [illegible] by weight of the best [illegible]; it is however [illegible] produced in [illegible] and that sold in the bazaars of India, owes its sweet [illegible] to sandal wood from which a [illegible] is [illegible]. The best otto is preserved in small [illegible] of rock crystal."

DECLARATION—I [illegible] a young lady, "that [illegible] a [illegible]; I would [illegible] my dear," added the speaker. "[illegible] Mr. G[illegible] to ask me to [illegible] persons I would [illegible] a blank [illegible] the question might [illegible] I popped the [illegible]."

NATURAL—A [illegible] a [illegible] and [illegible] a [illegible] "[illegible]."

[illegible]

RAISE THE BREAD STUFFS.—Unless the war in Europe shall cease, we see no prospect of any diminution in the price of bread stuffs the ensuing year. The only chance for mitigating the approaching "starvation prices," is, in man's planting, if it is nothing more than an extra hill of potatoes, as food either for man or beast. Last year there was a great harvest in England; much bread stuff too, had come, before the war had actually prevented it, from the shores of the Black Sea, for the support of the European population; and yet bread was in the old countries, and has been here in the New World, exceedingly high. It is hardly to be expected that crops will be so abundant in England another year, nor will any bread stuffs leave the Black Sea. The immense armies and navies there, will require it all on the spot. And the producers in England have become very much diminished by her people going into the war, and by emigration to Australia, America, &c. Yet there are as many mouths to feed as ever. We are expecting that provisions in all Europe will be exceedinly high next year—if so, they must be even higher with us than they are now. What the poor are to do, it is difficult to say. At any rate, we repeat the solemn advice we have heretofore given, that every man who can, should sow or plant something. He need have no fears that bread will be so low as to render it valueless; but high or low, every body must have something to eat, and the way to get it is, to raise it.

THE above we publish for our readers as a glance at the tone of our Eastern exchanges. We take it from "Drew's Rural Intelligencer," published at Augusta, Maine; a journal devoted to home interests—a most excellent paper, and deserving a generous support. If in the grain-growing States, the cry is, "Raise Breadstuffs!" now, what will be the cry by-and-by? By referring to our leader of three or four months ago, it will be seen that we prophesied this voice would come. Listen to it, and remember!

GRASSHOPPERS AT OAKLAND.—The great masses of this destroyer which were seen at Suisun Bay last Sunday, floated down to San Francisco and portions over to the shores of Oakland. On Tuesday last they were seen in considerable quantities along the shore at Oakland, and some anxiety was felt at the knowledge of their approach. It is hoped, however, that they are not in sufficient numbers to do much harm.

SUDDEN DEATH.—At San Antonio, very suddenly, on Monday last, the wife of Gov. Foote. The deepest sympathy is felt for the afflicted family, for the loss is irreparable to them and to the community at large.

SACRAMENTO No. 1, and Alameda County Agriculture, with events at Oakland, will appear in our next.

SHIP ADELAIDE.—From the San Francisco Journal, we learn that this clipper, now on her passage to New York, has on board 75,000 lbs. of wool; 30 tons of rags; 25,000 bushels of grain; and 2,000 bbls. flour, all California productions. This looks as if we are preparing to reverse the channels of trade.

MARRIED.

On the 3d July, in this city, James W. Huhler and Miss E. Laurent.

On the 4th July, in this city, by Rev. J. T. Jones, Theodore F. Mills and Miss Loretta Arabella Schurdenheimer.

On the 4th July, in San Francisco, by Rev. E. S. Lacy, David N. Hawley, of the firm of J. M. Brown & Co., and Grace Dunbar, daughter of E. Bigiow, of Charleston, Mass.

On the 4th July, in San Francisco, by Rev. E. S. Tracy, C. A. Hawley, of the firm of Hawley & Co., and Lizzie, L., daughter of G. B. Bradford, all of that city.

On the 6th July, in San Francisco, by Rev. Dr. Scott, Franklin H. Day, and Miss Hermione Ball.

On the 26th June, in Shasta, Henry O'Neil and Mrs. Mehlnbel Sanford.

DIED.

On the 2d July, in San Francisco, John P. Hill, of N. H., aged 35 years.

On the 4th July, in San Francisco, Mrs. Eliza Berry, a native of Scotland, wife of Alex. Stott, aged 44 years.

On the 5th July, in Sonora, William V. Iveas, of England, aged 30 years.

☞ Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

Campbell's New Smut Cleaner.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, near Sansome, San Francisco.

v4-2 CHARLES CAMPBELL.

C. L. NORTH,
MACHINE SEWING,
145 *Sansome Street, between Washington and Jackson,*
SAN FRANCISCO.

For Grain and all other descriptions of Bags, constantly on hand and made to order. Mattresses, Ceilings, Tents, and ALL PLAIN SEWING, done with neatness and dispatch.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the President,
v3-26 C. I. HUTCHINSON.

☞ **"Hope Never Dies."**—Read the following tribute to WISTAR'S BALSAM from the Kinderhook (N. Y.) Sentinel, dated July 21:

"A remarkable cure of Consumption has recently been effected by this medicine, in the town of Chatham, in this county, and which was related to us by Dr. Herrick, an eminent physician of that town, to whom we have permission to refer. A young lady, who had long labored under an affection of the lungs, was considered by her friends as beyond the reach of medicine, and she was informed by her medical attendant that she must die. She was induced to send for a bottle of WISTAR'S BALSAN OF WILD CHERRY, as a last resort. The young lady experienced great relief, and two more bottles were successively procured and administered. She is now happy in the restoration of health."

Sold by all druggists.

Agents for San Francisco, B. B. THAYER & CO.

Brookline, Feb. 5, 1851.

To SETH W. FOWLE:

My Dear Sir—Having experienced results of a satisfactory character from the use of WISTAR'S BALSAM OF WILD CHERRY, in cases of severe colds, during the past two years, I am induced to express the full faith I have in its renovating power.

I was first induced to try this medicine as an experiment, about two years ago, in connection with the strong recommendation of a friend, who was well nigh gone with consumption, and whose relief from the use of it satisfied me of its great value in cases of colds and decline, and most clearly demonstrating, to my mind, its great value as a restorative, that only needs a fair trial to insure a grateful demonstration from the public. Your obedient servant,

SAMUEL A. WALKER.

*** Be sure it is signed I. BUTTS on the wrapper.

Agents for San Francisco, B. B. THAYER & CO.

Sold by all Druggists. v4-2

☞ **Religious Notice.**—There will be Public Meetings held at the "Hall of the Sons of Temperance," on Washington street, between Sansome and Montgomery, every Sabbath Day, viz: A Prayer Meeting at 10 o'clock, A. M., and Public Lecture at 3, P. M. NATH'L THURSTON.

New Invention!
Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, *i. e.*, nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. To the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3-26 Third street, South Beach, near South Park.

Oil! Oil!! Camphene!!!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at 51 K street, Sacramento, for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure genuine.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices. [v4-1] WILLIAM BAILEY.

Removal.

W. N. BRAINARD, (successor to Morehouse & Brainard) has removed to *No. 55 K street, between Second and Third*, and will be pleased to wait on his old customers, who may favor him with a call.

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 istl C. M. DAVIS, Proprietor.

Wilson's Exchange,
By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. JAMES, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v3-25

Rassette House.

AGRICULTURAL, &c.

Pitt's Double Pinion Eight or Ten Horse Power.

THIS Horse Power, as now manufactured by the subscriber, is admitted by those who have purchased and used it, to *surpass,* for strength, ease, durability and cheapness of repair, any Power ever offered to the public.

Their great superiority over other powers, consists in the plan of construction. It will be seen that this Horse Power is just double the strength of any *single geared power,* and is the only real Double Pinion Power in existence.

Notwithstanding it is sufficiently strong and warranted to stand the full strength of eight or ten horses, it is also warranted to give as much effective or useful power, when driven by one or two horses, as any other power, whether constructed on the endless chain or lever principle.

I have, for the last eight years, manufactured and sold a large number of these powers, during which time they have been thoroughly tested, and gained a high reputation over all others: *I therefore challenge competition!*

At the great trial of Horse Powers at Geneva, in 1842, where it was thoroughly tested, it received the New York State Agricultural Society's First Premium, "for the best Horse Power for general purposes." At Cleveland, O., in Sept., 1852, it also received the State Society's First Premium. Also, at the great Agricultural State Fair held at Pittsburg, Pa., in 1853, it was awarded the First Premium.

I deem it unnecessary to add any further testimonials to corroborate the high recommendations here given, as the best recommend of its merits is a thorough trial.

The above machines are for sale by

CASE, HEISER & CO.,
No. 60 Sansome street, San Francisco, Cal.

who are also prepared to furnish castings and extras for repairs for said machines, and are appointed my Agents to receive orders or sell my machines in future in California and Oregon.

JOHN A. PITTS.

Words that are often used together, become associated in the mind; and unless we resist the force of verbal association, we shall often say something different from what we mean.

Jean Paul says, men's feelings are always purest and most glowing in the hour of meeting and farewell; like the glaciers, which are transparent and rosy-hued only at sunset, but throughout the day gray and cold.

"Pop" on Pay.—It is reported that, in event of a war, the government intend making a tax on all bachelors. The only remedy for these unfortunates then will be for them to make attacks upon all spinsters.

The Enn.—"Ven do you think de world will come to an end?" asked a German, "Oh, probably in about three months," answered the joker. "Ho, vell, I no care for dat," exclaimed Hause, with a smile of satisfaction, "I pe going to Puffalo dis spring."

An eminent rider has undertaken, for a heavy wager, to ride the well known horse Chestnut against the celebrated horse Radish. He will use a saddle of mutton, and the spurs of necessity, for the occasion.—*Exchange.*

Pike asks if the trial will come off over the Course of Time.

Nature ann Art.—"Ah, Eliza," cried a Puritan preacher to a young lady who had just been making her hair into beautiful ringlets: "had God intended your locks to he curled, he would have curled them for you." When I was an infant," replied the damsel, "so he did; hut now I am grown up, he thiuks I am able to do it myself."

Novel Bee Hiving.—A bee-hiving extrordinary came off in Houston, Texas, a short time ago. The swarm was passing over a train of cotton wagons, when they became confused by the noise, and descended, choosing as a setting place, the hat of the wagoner, on which they piled up after the style of an old grenadier's bear skin. The hat was then removed to a wagon and conveyed six or eight miles, and the bees securely hived.

He Forgot Something.—"What did your mother say, my little man? Did you give her my card?" asked an inexperienced young gentleman of a little boy, whose mother had given him an invitation to call on her, and whose street door was accordingly opened to his untimely summons by the urchin aforesaid. "Yes, I gave it to her," was the innocent reply; "and she said if you wasn't a nat'ral fool, you would not come Monday morning, when every body was washing." At this juncture, mamma, with a sweet smile of welcome, made her appearance at the end of the hall, when to her surprise, Mr. Verisopht, the visitor, bolted. "What does the man mean?" inquired the mamma in astonishment. "I dunno, but guess he's forgot suthin," replies hub.

Enough for One Ben.—Emigration in the State of Michigan was so great during the years of 1835–6, that every house was filled every night with travelers wanting lodging. Every traveler there, will remember the difficulty of obtaining a bed in the hotel, even if he had two or three strange bed-fellows. The Rev. Hosea Brown, an eccentric Methodist minister, stopped one night at one of the hotels in Ann Arbor, and inquired if he could have a room and bed to himself. The bar-keeper told him he could unless they should be so crowded as to render it necessary to put another in with him. At an early hour, the reverend gentleman went to his room, looked the door, retired to his bed, and was soon asleep. Towards midnight, he was aroused from his slumber by a loud knocking at his door. "Hallo! you there," he exclaimed, "what do you want now?" "You must take in anotber lodger, sir," replied the voice of the landlord. "What! another yet?" "Why, yes; there is only one here, is there?" "One! Why, here is Mr. Brown, a methodist preacher, and myself, already, and I think that's enough for one bed, even in Michigan." The landlord seemed to think so too, and left them to their repose."

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerreun Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to Vance's who wishe PERFECT LIKENESSES? Because he has now the best arranged, Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must hn more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with n coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot he produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Bulldog corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

MEDICAL.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." Dr. Carswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

Dr. A. H. Macanair, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. Shaw, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

Samuel A. Walker, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

Hon. Samuel S. Perkins says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,

Proprietor, Boston, Mass.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building,

South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself *principally* to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and *Hospitals*, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus;) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

NEW BOOKS.

ANNA CLAYTON; or The Mother's Trial. 12mo., cloth. Price $1. (Two editions in one week.)

A well-conceived and finely written tale, of high moral excellence.—[Boston Courier.

It is one of the most effective works issued during the past few years.—[Transcript.

It is decidedly the best popular tale of the season.—[Bee.

Second edition of *Burnham's History of the Hen Fever.* 12mo., cloth. $1 25.

The Boston Traveller says, "The sale of this book has already been immense—amounting in two weeks, to 20,000.

Burnham's new volume, the "History of the Hen Fever," is destined to have a great run. It is capitally written and illustrated, and is brim full of fun and spice. It will surely create a sensation.—[Ballou's Pictorial.

Turkey and the Turks. By Dr. J. V. C. Smith, Mayor of Boston. 320 pages. 12mo., cloth. 75c.

It is a most excellent work. It will have a large sale, for it embraces more real information about real Turks and their strange peculiarities than anything we have yet read.—[Post.

The Massachusetts State Record. One of the most valuable American Statistical Works. 5 vols. 12mo., cloth. $5.

The New Hampshire Festival. A graphic account of the Assemblage of the "Sons of New Hampshire," at Boston, Hon. Daniel Webster presiding. Illustrated. 8vo., cloth, gilt. $1 50.

Second Festival "of the Sons of New Hampshire." Illustrated with portraits of Webster, Wilder, Appleton, and Chickering. 8vo., cloth, gilt. $1 50.

Festival. 2 vols. in one. 8vo., cloth, gilt. $2.

Eleanor; or, Life Without Love. 12mo., cloth. 75 cents.

England and America. Illustrated. 12mo., cloth. 75 cents.

Sunshine and Shade; or, the Denham Family. 18mo., cloth. 37½ cents.

The Dream Fulfilled. 18mo., cloth. 42 cents.

Talmudic Maxims. Translated from the Hebrew. 18mo., cloth. 50 cents.

Consumption Forestalled and Prevented. 18mo., cloth. 37 cts.

Passion and other Tales. 16mo., cloth. 62 cents.

The Art of Conversing. Fourteenth edition. 32mo., cloth, gilt edges. 37 cents.

Floral Gems; or, the Songs of the Flowers. 32mo., cloth, gilt edges.

The Amethyst; or, Poetical Gems. 32mo., gilt. 37 cents.

Zion. With illustrative title. 32mo. 37 cents.

Sonnets. By Edward Moxon. 32mo. 31 cents.

Gray's Elegy, and other Poems. 32mo. 31 cents.

Turnover. A Tale of New Hampshire. Paper. 25 cents.

Popular School Books.

Foster's Book-Keeping. Twelfth edition. 8vo., cloth, extra. Price $1.

Foster's Book-Keeping, by single entry, exemplified in two sets of books. Boards. 38 cents.

French's System of Practical Penmanship. Twenty-seventh edition. 25 cents.

This little treatise seems well fitted to teach everything which can be taught of the theory of Penmanship.—[Post.

The best and most useful publication of the kind that we have seen.—[Transcript.

Beauties of Writing. 75 cents.

Boston Copy-Book. 42 cents.

Ladies Copy-Book. 17 cents.

Boston Elementary Copy-Book. 12 cents.

Cook's System of Penmanship. 37 cents.

The Art of Pen Drawing. 75 cents.

French's New Writing Book, with a fine engraved copy on each page. In four numbers.

No. 1 contains the First Principles.....10 cts.
2 A fine Copy Hand.....10 "
3 A bold Business Hand Writing.....10 "
4 Beautiful Epistolary Writing for the Lady.10 "

A new and original system of Writing Books, which cannot fail to meet with favor.—[Bee.

It is easily acquired, practical and beautiful.—[Fitchburg Sentinel.

We have no hesitation in pronouncing them superior to anything of the kind ever issued.—[Star Spangled Banner.

Ferry Notice.

NOTICE is hereby given to all persons interested, that the undersigned will apply to the Board of Supervisors of Sacramento county, on the 12 h day of June, 1855, if said board shall then be in session; if not, then on the first day thereafter that they shall be in session, for a renewal of his license to keep two ferries across the American river; one commonly known as "Hoyt's Ferry," near where 28th street of Sacramento City intersects said river; and the other commonly known as the "Middle or Muldrow Ferry," about two and one-half miles from said Sacramento City. SAMUEL NORRIS.

Sacramento, May 10th, 1855. v3-24

MISCELLANEOUS.

COLLINS & CO.,

PRACTICAL HATTERS,

(PREMIUM HAT STORE,)

157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at Collins & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

17 COLLINS & CO.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,

MARYSVILLE.

Corner of California and Battery streets, San Francisco. No. 56 Federal street, Boston.

Importers of Hardware, Iron, Steel, Cordage, Paints, Oil Varnish and Window Glass, direct from the Atlantic States an Europe, with a complete assortment of tools and implements for *Farmers, Miners, Carpenters, Coopers, Caulkers and Graters, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others.* v3-5

PACIFIC EXPRESS COMPANY.

THE late employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal energies.

In conclusion they would solicit a fair share of the favors of the public, pledging themelves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.

San Francisco, March 1st, 1855. v3-10.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,

No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of House Brokerage and General Directory, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their activity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

Pottery! Pottery!!

NOW ready and for sale at the SACRAMENTO POTTERY, on J street, near Sutter's Fort, a large assortment of Plain and Fancy Flower Pots; Butter, Preserve, Bread and Cake Jars, with covers; Cream Pots, Churns, Milk Pans, Jugs and Stovepipe Safes, of superior quality; with everything else in the line. Wares made to order. Dealers are particularly solicited to call and purchase. Orders to be left at the Pottery, or No. 264 J street.

AGRICOLA'S LETTERS.—NO. 8.

On the Origin and Composition of Soils.

EDITORS FARMER: It is well known to every one, that any soil, on which grass grows, contains, in greater or less abundance, all the constituents of a *fertile* soil, capable of growing all the crops which farmers generally cultivate: and, as a general rule, that the greater the quantity of grass which any given soil naturally produces, the greater its capability of yielding all kinds of crops; although this is not the case in every instance. But before fertility can be obtained, or even anything else than mere barrenness, it is necessary that the soil should contain a great number of different constituents, many of which, in most instances, are not to be found in the rocks over which it lies. But the Earth is so constituted that this apparent difficulty is obviated in a very simple manner. The rocks which overlie each other in regular strata, like the leaves of a book, following each other as its successive pages, (only that a leaf here and there, and sometimes more, are occasionally wanting,) have been as it would appear purposely disarranged, and (as is generally the case) the lower strata by some convulsion of nature pushed up at suitable intervals right through those that overlie them, leaving their edges exposed to the action of the atmospheric elements, the lower strata frequently forming the tops of the prominences or mountains so produced; and the rain and springs, which flow from the mountain-sides, running down their slopes, and over the exposed edges of the several strata of which as we have seen they are composed, so disintegrate, mix, and combine their component parts, as to make, in the valleys below, soils possessed of all the requisites of fertility, and all the constituents of cultivated plants. Consequently, as we ascend the mountains, we not only find a less temperate climate, where the same plants as grow at their base decline for want of warmth, but also a less genial soil, formed of grosser materials and in a less suitable commixture.

It would be idle here to insinuate, as some do, that this beautiful and necessary arrangement, for growing the plants and vegetables on which we subsist, shows evidently that the Earth, as now constituted, exhibits but the "vestiges" of some former and better creation, when the several strata lay horizontally, one above the other in regular rotation; each distinct stratum the product of a separate era. In the same way I might go speculating on how the several strata of rocks came to be composed of so many different ingredients; and whether, at some previous time, these ingredients did not each exist separately, arranged according to their respective specific gravities. This would lead to another inquiry, as to whether they existed in a metallic state, or in the form of earths and oxides as they now do. But these inquiries, however interesting, are not called for on this occasion, and are therefore inadmissible. What we are chiefly to notice is, that except some such disarrangement, or contrivance, as now prevails had taken place, we could not have that mixture of soils, which is so essentially necessary to the very existence of the plants, on which we principally depend for our subsistence. To show this more evidently, and also to enable us to adopt some rule by which the agricultural nature of soils may be ascertained, I adduce the following table:

Constituents of Soils, &c.		1. From Nebstein, near Olmutz, in Moravia.	2. From the bank of the Ohio, United States. Soil.	2. Subsoil.	3. From the polder of Alt-Arenberg, in Belgium.	4. Ashes of Wheat and straw. (Sprengel.)	5. Ashes of Wheat and straw. (Boussingault.)	6. Ashes of 100 bushels Wheat. Sprengel.

* Carb. of Mag. † Carb. of Lime. ‡ Carbon.

The above table is from the analyses of Sprengel, as quoted by Liebeg and Johnston, and of Boussingalt, one of the best of modern authorities—the relative proportions of ashes in numbers 4, 5, and 6 being calculated from the data furnished by these chemists. This I did, to have the information they have afforded us, in a form, in which we can more readily compare the inorganic constituents of our principal breadplant with those of some of the most fertile soils, with which we are acquainted. "Of these soils," I quote from Johnston, "the first had been cropped for 160 years, without either manure or naked fallow. The second was a virgin soil, celebrated for its fertility. The third had not been manured for twelve years." This amazing fertility we are not disposed to wonder at, when we perceive that these soils bear so close a resemblance to the ashes of one of the principal grain crops, which may be taken as requiring one of the best of soils, for its perfect production. What will most strike any one, in the above table, is, that there should be so much variation between Sprengel and Boussingault, in regard to the analysis of the same plant. This was no doubt owing to the different modes of analyzing adopted. While Davy found, in good English wheat, an amount of glutinous matter, varying from 19 to 24 per cent., Boussingault found, in that of the neighborhood of Paris, but 9.2. This was by mechanical analysis, which gave only 9.2 of raw gluten; but the quantity of nitrogen, contained in the same wheat, indicated 14.4 per cent. of raw gluten. The difference (5.2 per cent.) he ascribes to the vegetable albumen and gluten, carried away by washing in the mechanical analysis. After all, this is an extraordinary difference from Davy; and when I find Pereira quoting Odessa hard wheat, which has more gluten in it than English wheat, or any other with which I am acquainted, as containing 14.55 and French as 10.96, a statement, which, from my own experience, I know must approximate to their relative proportions, I can only come to the conclusion which every one, who has paid the least attention to the agricultural analyses of the best of chemists, must do—that, as each has a separate way of analyzing of his own, the result of their experiments, although it may show the relative connection, position, or bearing, which the particular article analysed has to some other analysis by the same chemist, is not to be depended on, as positively containing all its constituents, and in exactly the proportions in which Nature or accident has conjoined them.* Let us therefore take the analysis of the ashes of wheat as made by Sprengel, who likewise analyzed the soils (Nos. 1, 2, and 3,) and observe how closely the constituents of the ashes resemble the earths of these soils.

But let us proceed with the different items in the list successively: Silicia, (No. 1,) a little to spare; Alumina, more than three times the quantity wanted; Oxides of iron, in excess, being but little wanted in the plant, although, in a certain state of oxidation, Iron may be useful for the decomposition of water, and may thus be the means of furnishing to the plant the gases, of which it is composed, in the manner in which it requires them; Magnesia, more than is wanted; Lime, deficient; Potash and Soda, considerably deficient; Chlorine, deficient. Thus, this soil, which has grown crops for 160 years, without manure, and still fertile, is deficient in several of its constituent properties—how happens this? How happens it that a soil, having but 2-15 of the lime, 1-9 of the potash and soda, 1-7 of phosphoric acid, 1-137 of sulphuric acid, and 1-80 of chlorine, necessary to constitute perfection, is not only not barren, but so very productive? To say that all the constituents of the plant are contained in such a soil, is not answering the question satisfactorily; and, as it includes a number of interesting matters, I shall defer it, and any further investigation of this subject, which I may find it necessary to make, till next week. AGRICOLA.

* We must not however underrate the invaluable labors of chemists, as the constituents of plants are liable to great variation; owing to the facility, or difficulty, which the plants have in procuring them. Johnston found that the ashes of turnips, grown on land dressed with guano, yielded 19.37 per cent. of phosphoric acid; while those adjoining, which had been manured with farm yard dung, only yielded 7.33.

A Letter from the Interior.

COTTONWOOD, Shasta county, July 3, 1855.

MESSRS. EDITORS: Having had the pleasure of reading your valuable paper for several weeks past, and perceiving that you have but little information from this section of the State, I thought it might be agreeable to your readers to learn something in relation to the farming interest here, and therefore send you a few "notes by the way."

Agriculture, generally, is in an extremely prosperous condition, but has been subject to some of the drawbacks, incident to the late wet season and the *pests* of grasshoppers, which have brought injury to the crops, fruits and gardens.

In relation to the grain, very much of it has been injured by smut, particularly that grown from Australia seed. Some farmers have not made more than half crops. From the Italian seed, Major P. B. Reading (three miles from this) has a very fine crop, without the least smut, whilst acres of the Australian is very much injured. The grasshoppers have destroyed three hundred acres of wheat upon the ranch of Capt. Swift, on the Sacramento, near Stoney Creek; and one hundred acres of barley, raised by Mr. Houtoun, in the same vicinity. In this county some of the farmers have been obliged to cut their barley and oats to save them from the *pests*, which has covered the fields in swarms in the coorse of a few hours. The grain is nearly cut, and the harvest-home is just beginning.

To the fruit, gardens and young trees, the grasshoppers have been and are a great calamity; for they not only devour the fruit, vegetables, young leaves and twigs, but they eat the bark from the young trees, the growth of one and two years, and kill them. Major Reading has a very handsome and extensive garden plat upon the bank of the river, which is in a high state of cultivation. Upon this he has forty five peach trees, three years old, that were so heavily with fruit, he was obliged to prop the lower limbs early in May. It was supposed they would yield over sixty bushels of peaches of the finest kind; but the grasshoppers have eaten a great deal of the fruit, and it is very doubtful if there will be a peach permitted to ripen. There are, also, upon the same plat, one hundred and seventy peach trees of two years growth, thirty of which are from pits selected by and given to Major Reading by his friends on his last visit to the Eastern States. Five of these trees, standing four and a-half feet in height, bore fruit this season; and one tree, from a pit presented to Major R. by Senator Weller at Washington City, planted in the spring of 1853, stands sixteen feet high, is very broad and in luxuriant leaf. There are, also, many apple, pear, cherry, English walnut and olive trees, pomegranates, grapes and osage orange—all were growing very finely until the grasshoppers arrived. The cherry trees were imported from Boston last January by Major S. J. Hensley, and were planted here in February: two of them standing four feet in height, had very fine, large, ripe fruit upon them in the middle of May. One of the olive trees is in very fine condition and luxuriant, and will bear next year. Cuttings of olives, set out last spring, are growing very well, and may be saved from the scourge.

There are many thousands of grape vines—those of several years growth are loaded with fruit. Some of the cuttings of last year had grapes upon them, but they fell a prey to the ravages. Several hundreds of Locust, Pride of China and Catalpas, mostly of two years' growth, which had increased very much this season, have been very much injured, leaves entirely stripped off; others, of smaller size, have been cut down to the parent stem, whilst a few have the back eaten entirely round the body.

The grasshoppers made their appearance about the 1st June and at once ate up all the cabbage, salads, melon vines, the tender leaves of root plants, and then attacked the trees.

Major Reading has tried every mode to get rid of them; but though less in numbers, "their strength is legion still." He at first tried driving. A party of some thirty-five Indians, men, women and children, drove the grasshoppers before them with brush brooms, very successfully, into circles and small pits, and collected bushels of them. This was before they had wings: when disturbed now, they fill the air and merely change their location. All the small fruit trees have been wrapped with coarse bagging, which may save them from being killed, but probably will destroy the growth of this year. The grasshoppers being an article of choice food of the Indians, they are very happy to have the privilege to gather them: consequently, Major R. has a few women employed in picking them from the trees, in the hope of saving a few peaches. It is quite impossible to shake them off, and they resist quite a strong wind.

The theory you have advanced, in your last paper, in relation to this scourge, does not find any support in this section. Upon the fine farm of Mr. S. B. Sheldon, and also upon the place of Mr. Love, upon the east bank of the river, near the mouth of Battle Creek, the grasshoppers are now devouring every young and tender leaf. These farms, lying as they do at the confluence of two streams, are almost entirely overflowed every spring for a short time; causing the land to be very moist all the year. Mr. Sheldon was obliged to cut his barley before it was ripe, as the grasshoppers were doing it for him, not near the ground, but close under the head of the grain. Mr. Love's garden is now being destroyed. The soil is very wet, and every morning the new stands upon the plants like rain, yet the *pests* will not leave anything [illegible].

Upon none of the farms in [illegible] there be any corn or potatoes [illegible] —the crops are destroyed. The [illegible] are eaten to the stalk, and the [illegible] ground.

Upon the farm of Mr. [illegible] might raise about [illegible] up 1,000 very large [illegible] promise, and appear that one [illegible] a

siderable extent. There is no place that has not suffered, and the loss of all young fruit and ornamental trees and plants is the general expectation.

Improvements have been very general this season. Major Reading has now over six thousand acres inclosed with board fencing, and other farms are being inclosed in the same manner.

The health of this part of the country is very good. The weather has been very warm; the thermometer ranging from 76 to 105 deg. At three o'clock, yesterday, it stood at 90 deg. The snow is fast disappearing from Shasta and Lassen's Peaks, and the cool breeze from that direction, at evening, is truly refreshing.

The roads are in fine condition; the stage companies and teamsters have fine stock upon them, thus holding out inducements to travel and freighting. A party of eight arrived from Yreka a few days since, at Slack's Ferry, on the Sacramento, having explored and found a very good wagon road from that place to the river, making the distance one hundred and forty miles, and no hills to obstruct the passage of freight wagons in any manner whatever. It is contemplated to open the road immediately, thus making it the more necessary to clear the Sacramento river of all obstruction, to the head of navigation, twelve miles above this point.

I have been particular in relating the ravages of the grasshopper, as it is the inquiry of every one, and when you consider the very great yield of the land in this county, the scourge is really lamentable, and calls forth every suggestion to find means to prevent its recurrence. There is no part of the world where greater natural inducements are held out to the farmer, nor where the land can be cultivated with less expense or labor; yet it is sadly discouraging to fear, every year, a return of a plague worse than the locust. It is to be hoped, therefore, that some mode will soon be discovered to destroy them before they can do any damage.—More anon.

Yours &c., IMPROMPTU.

We are truly obliged to our friend "Impromptu" for his valuable and interesting letter; for his sketch of the condition of our up-river friends, their advance in Horticulture, and the ravages of the "*peste*." This earnest zeal for the general cause is an indication of a permanency to the good work, in spite of all the retarding influences. The ravages of the grasshopper are indeed deplorable, and it is of the highest moment that every instance of their appearance, their ravages, every mode of eradicating them, their action, and their term of stay, should be carefully noted.

We notice the remark of our correspondent relative to *our theory* for the removal of the grasshopper. When he says "it does not apply to that section of the country," we presume he means a part of our theory; for we notice *a part is in successful practice there*, and we hope with good result. We allude to the "bagging of trees."

We have *many parts* to our theory for the removal of this "*peste*," it will be remembered, and we wish them *thoroughly tested;* when not good, utterly rejected, and this is the only way to advance. Close and rigid scrutiny of every plan, practical experiments, and oft repeated, will alone *prove* the value of any theory. Our theory for the evils of the grasshopper consists in three or four principles and some co-relations—viz.: the earliest possible winter plowing, to disturb their eggs and expose them to the action of the wet season. Deep subsoil plowing and constant high cultivation. These, in addition to early planting, will produce a constant moisture, and when the *peste* appears, freely irrigate the soil and shower the foliage. This, with occasional bagging of fruit trees and shading, will, in our humble opinion, remove from our State, in a great measure, not only this scourge, but many others in the shape of gophers, squirrels, moles, worms, &c.

The condition and location of the farms alluded to, where heavy dews were constant, are certainly evidences that in these instances the plan did not work; but it will be recollected we said the grasshoppers would not eat the tomato, unless he was obliged to do so from want of any other food. So with the cottonwood. Now, recently we have found instances where he has eaten both, and from actual necessity. It was "eat or starve," and may it not be so with the farm alluded to? May not the destruction have been so great around, that the grasshopper was driven to the wet grounds? We know of similar cases. We do know of cases where *daily showering of water alone has successfully driven away this peste.*

We wish free discussion upon this and all like interesting points; and we will thank "Impromptu" and all others to write freely.

It is our wish to open a column for Questions and Answers, and to this we invite all to join. So, friends, send along your querries. This will draw out valuable facts, and good will come out of it.—Ed.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, JULY 20, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

☞ MANUFACTURERS of every branch, Nurserymen, Seedsmen, Florists, Booksellers and Publishers, and every branch of business connected with California interests, should advertise in the CALIFORNIA FARMER, if they wish to have their business known over the country.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

O. C. WHEELER, Rec. Sec.

Sacramento, June 23d, 1855.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co., have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanying the same.

Everything of like liberality from our citizens, in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

SACRAMENTO, July 5th, 1855.

THE public throughout the State and Agriculturists in particular, are hereby notified that the Corresponding Secretary of the Society, J. L. L. F. WARREN, Esq., is now making the tour of the State, for the purpose of presenting the general interests of Agriculture to those who are interested in its advancement, and gathering statistics for the Society, with the view of adding to the interest of the approaching Annual Fair.

It is not only desirable but indispensable, that the membership list of the Society must be largely increased beyond its present number, in order to make the Fair what it ought to be, considering the important position that California occupies among the Agricultural States of the Union.

Col. WARREN is furnished with Certificates of Membership, and is authorized to furnish them to those who may desire to become Members of the Society, and are earnest in their endeavors to develop the Agricultural resources of the State.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

O. C. WHEELER, Rec. Sec'y.

Mercantile and Commercial Prosperity—Manufacturing and Mechanical Industry—California Prosperity.

THE approaching Annual Fair of the California State Agricultural Society should awaken a general anxiety among all who are interested in any branch of Manufactures or the Mechanic Arts. Every artist in our State of every name and character should strive to present to the coming Industrial Exhibition a specimen of their skill. Liberal premiums have been offered and additional SPECIAL PREMIUMS will be awarded to everything that shall be esteemed of public utility or that shall tend to improve the taste, advance the arts or increase the happiness or prosperity of the people.

It should be universally understood that the STATE FAIR is intended not only for an Exhibition of the Agriculture of California, but to embrace every branch of Home Industry, and Works of Art; and it is expected that each and every citizen of the State will feel called upon to give it their best influence, their early and prompt attention, for every citizen is and must be affected by the general prosperity of all interested—for unless these interests are fostered and cherished, unless the people became sensible of their identification with them—California will not soon emerge from her present embarrassment. The depression of her Agriculture was immediately followed by a fall of real estate, this checked and and depressed mercantile interests, and the commercial soon felt the blow. Then the early budding of the germs of manufactures was stayed, workshops, machine shops and mechanical rooms were closed, apathy seized Home Industry, and all now feel the blow.

The history of the world will show that whenever agricultural interests are depressed, whenever breadstuffs are below the cost of producing, bankruptcy and ruin march through the land, ships lay idly at the wharves, warehouses are closed, buildings want tenants, and tenants want work. When the agricultural interest is depressed, a paralysis seizes the whole body and death ensues, unless a speedy relief comes. The disregard which has been paid to these truths—the low esteem with which the business men of California have viewed the Agriculture of California—the unwillingness of men of wealth and influence to recognize it as the basis of our prosperity, and the jealousy of many lest Agriculture should supplant Mining, has hastened the crisis, and the evil is now being felt. It is not now the cultivators of the soil alone that are depressed and "hard run," it is not now the farmers alone that are "short;" it is not now this great interest alone that flags; but every interest throughout the State. There is no one branch of business that is not depressed and suffering, unless we except the sheriffs and the law, and this arises from the abominations and curse of the "attachment laws," a blot to our statute book. The farmer in misfortune is at the mercy of the greedy shylock, and if in his struggles to free himself debt he hastes in his crop, the moment it falls, it *falls into the hands of the merciless, who watch to catch it.* Standing grain is safe, but if it falls, it is often never to rise again for the hard working man who grew it.

But it is now evident that this universal depression is being better understood, and the cause of it fully realized; and we trust the agricultural interest will soon be properly appreciated. *The present moment is the time to act.*

FARMERS themselves must act, must look to their interests, their pursuits, their calling, as the most important interest of the State.

REAL ESTATE OWNERS must of necessity see that their only hope lies in the returning prosperity of this great interest.

MERCHANTS must and will see that *their business* is most materially affected by the condition of the agriculturists of our State.

Commercial men, too, are beginning to feel that their chief dependence lies here. How many ships would be wanted for the Pacific trade were there no agricultural products to convey? Take away from the mercantile and commercial transactions of the day, the grain crop, flour, root crops, tea, sugar, rice, coffee, cotton, tobacco, fruits and spices, and where would the business of the merchant and ship owner be? Take away from the manufacturer, cotton, tobacco, wool, hides, tallow, leather, flax, hemp, silk, &c., and where would the manufacturer and ship owner be? Take away from the mechanic, the lumber, the iron, and other ores, the clay of our potteries and China manufactures, the clay of our brick yards, the granite and marble and slate of our mountains and hill sides, and where would be our mechanics and artisans? And do not all these spring directly from the soil? are they not immediately drawn from or sustained by the soil? are they not AGRICULTURAL productions?

If it be so, and who can deny it? then we assert that Agriculture being the BASIS of all our prosperity, and the basis of all prosperity the world over, demands and should receive the universal recognition, support, sympathy and fostering aid of all classes of our people. For these reasons we appeal to the citizens of this State for their prompt encouragement to the coming State Fair, as it is worthy their highest attention.

The City of Oakland.

THERE is probably no locality upon the Pacific coast for a beautiful city, superior to that of the sister city of our Commercial Emporium—Oakland, or the "City of Oaks." Nature seems to have intended this location for a luxurious retreat of the business man of a great commercial emporium, and we believe at no distant day, the mercantile and commercial men, bankers, and others, of San Francisco, will have their residences at Oakland. The soil is of the very best character, and susceptible of the highest cultivation. Among the many localities for beautiful homes, we have seen none that present greater or more favorable prospects of future permanence. It is deeply to be regretted that any delay in the settlement of land titles should retard the rising and improvement of this city, so highly favored by nature.

We would most urgently cry out to all who have a love of the beautiful, "Woodman! spare that tree!" and apply it to one and all. Those noble oaks, let them all stand. Nature has designed them as beautifiers and protectors of the soil, and it will be found that for the purposes of gardens they are no hindrance to a high state of cultivation. By deep cultivation, an understanding of the seasons, soil, and climate, and with a generous public spirit, Oakland can be made an Eden almost.

While at Oakland, we had a delightful drive, some ten miles, on the San Pablo road—visiting the ranches of Messrs. Wilson, Plumwell, and others, and the dairies of Messrs. Coggeshall, and Aldrich, and many very earnest and intelligent farmers; among others, the residence of A. C. Brown, Esq., a splendid location upon an eminence commanding a view of the Golden Gate and the whole bay and coast adjacent. We found pleasure in going over the grounds of Mr. B., for by the evidences, we saw that his house, barns, grounds, and farm, were designed as a *home*, and his liberal outlays manifested his design to make that home *permanent*. This is what our citizens must do. Establish permanent homes and improve them to the utmost. We also visited the residence of M. Fallen, Esq., and although of but two years, everything in and around was in appearance the work of years. Mr. F. has one of the most picturesque locations upon that side of the Bay—surrounded by noble oaks, yet open to the Bay. His mansion and other buildings are all built and established, his gardens and grounds laid out to comfort and convenience, yet all in keeping with the graceful style of modern architecture. His fruit trees gave promise of some fine fruit. We hope that Oakland may be spared the devastation that has befallen other places.

We were pleased to meet many of the business men of San Francisco, who are now but temporarily there, but who we believe will become identified with it yet. We also met the past and the present Mayors,—Mr. Carpentier and Mr. Campbell—of Oakland, in both of which gentlemen we know she will find men ever ready to do all in their power to advance her best interests.

Among the many interesting features of our visit to that city, none afforded us more happiness than making the acquaintance of the highly gifted MRS. CLARK, late editress of the Contra Costa and now connected with the Evening Journal of San Francisco. We worship flowers—we worship trees and plants—we worship all the beautiful things of earth, and the more they are cultivated the more beautiful things become; but in a higher degree do we reverence a highly cultivated mind, for in it we see trees, plants, and flowers that are not only perrenial but eternal, yielding fruit delicious to the taste and odorous to the senses, and these too, not only perpetual but deathless! When we see this mind in woman—when it not only makes home joyous and beautiful, but from its never-failing resources, sends forth a stream from a living fountain to purify and exalt human nature, pleading human progress by means of the highest intellectual and moral refinement—then we worship and reverence mind as more durable and beautiful than all earthly things however pleasing, for we know by an intercourse with such minds all are exalted and

made better. We look forward to the period—near we hope—when through the instrumentality of female education, our community shall be as thickly gemmed with intellectual women as are the heavens above us, all brilliant, with stars.

Bucknen Ranch—Stockton Road.

On Saturday last, we took a trip on the Stockton road, to view the several farms and ranches of that vicinity, and, at the request and invitation of Judge Bucknen and other agricultural friends, to have a social talk over the interests which this journal advocates. We drove directly to the residence of the Judge, and in the evening met the farmers and ranch owners of that vicinity, and in the new building where the festivities of the 4th of July were held, we advocated the cause of Agriculture and the coming State Fair, and those kindred interests which grow out of them. We were pleased to meet so many that seemed to be truly interested in the cause. By request, we remained over the Sabbath, to meet the citizens of that neighborhood and again addressed them at the School House, on Sunday evening. Our theme being "the Beneficial Influence of Agriculture upon the Homes of California and the blessings it confers," we were gratified to have present so many ladies and children that recognized and felt the importance of making home beautiful by the art and science of Agriculture.

During our visit, we called at "Elk Grove Hall," a public house connected with a large stock-farm, and situated in a fine oak grove, with a broad and beautiful prairie in front. We also visited the ranch of Mr. Perrin, very pleasantly located upon an open prairie and susceptible of great improvement. Our next call was at Smith's Ranch, near the Cosumnes River. This was a fine location—a very handsome residence, built of brick, with broad porticoes—well designed garden, and good out buildings, but when we rapped at the door, there was a hollow sound, and the echo that came back, said, "it is not good for man to be alone." The hollow sound—the closed windows, and the absence of those who alone can make even a palace a home—told us that our friend belonged to that class of citizens upon whom our legislators are disposed to levy an extra tax. So fine a residence, we felt should be a happy home. We regretted the absence of the Proprietor, for we wished to say thus much to him personally. We thence crossed the farm-bridge of Mr. Hicks to the ranch on the opposite side, (described in another place,) and returning again collected many interesting facts on our way back to Bucknen's. This is the principal stage house upon the Stockton road, and travelers can always be sure of the kind personal attentions of those in charge of this house, for the Judge is indefatigable in his efforts for the comfort of his patrons. We are under many obligations to him and his family for their courteous hospitalities and attentions, and to the Judge for his particular attentions in striving to awaken a proper interest, and his aid to scatter intelligence of all needed information upon, the subject of agriculture.

We found upon our route much to interest. Upon many ranches, considerable stock,—dairy cows. Wheat crops, we found generally short of the anticipations. The vegetable gardens upon the whole route, were cleanly swept by the grasshoppers.

We found a great want of water, over the entire route, and as we looked over these broad and beautiful prairies—composed as they are generally of good soil—we saw the necessity of Artesian Wells. With these perpetual fertilizers, these noble plains would become a perfect and perpetual garden, and whosoever shall be the first to successfully introduce them along this road, has a snug fortune at his command.

Here, as elsewhere over our State, we saw and heard of the evil that results from the unsettled titles to land; preventing as it does, great improvements, it hangs like an incubus upon the people.

For the interest displayed for our California Farmer, we are particularly thankful, and shall endeavor to keep our friends in this section, and all others, posted on all matters which affect their interest.

Important—Male or Female Calves.—Count de Gourcy, a French stock raiser, in experimenting with stock, found that the connection of the bull and the cow, before milking, resulted in a large proportion of he fer calves. In a communication from B. V. French, Esq., of Braintree, Mass., to the Prairie Farmer, dated Feb. 8, he says: "I have to-day examined my account, when I was certain of the pregnation of cows, and with this result—3 with empty bags brought 3 bull calves, and 27 with full bags brought 18 heifers and 9 bull calves." These are facts worthy the notice of the stock raisers of California.

Hicks' Dairy Ranch.

The value of our Dairies, their extent, or the influence they are destined to exert upon our trade and commerce, cannot be estimated or conceived without a personal inspection. During our trip to the Cosumnes river and the neighboring Ranches the past and present week, we visited this famous and justly esteemed Ranch.

Hick's Ranch is situated upon the banks of the Cosumnes river, about twenty miles from Sacramento city. Crossing the river by a strong and handsome bridge erected by the public spirited proprietor of this ranch at his own cost, you emerge through a fine grove of oaks to the beautiful and fertile grounds that surround the residence of the proprietor—a handsome mansion, full of the comforts of life, convincing you that it was intended as a *home*. Around it is a well cultivated garden, containing a variety of the most desirable kinds of vegetables, fruits and flowers, grapes and peaches in full bearing; and roses, dahlias, and other flowers beautify the entrance to the mansion.

A large water wheel, with buckets, carried by the current of the river, supplies an abundance of water, which is conveyed through troughs and irrigates a very large tract of cultivated ground. By this means the dry season is not felt. This Ranch is the only one we found that had escaped the devastating march of the grasshopper; all other grounds near by had been swept. We were informed by Mr. Hicks, that at the time of their coming in great numbers there also came *great quantities of blackbirds*, and while the insects were upon the corn fields, the birds ate and drove them away. However numerous the birds may have been, or however many insects they may have destroyed, we think the constant flow of water upon the garden and fruit orchard, drove the grasshoppers to the cornfield, and saved the former portion of the grounds—for being so near the house, the birds did not come to it.

After examining the gardens, Mr. Hicks showed us his dairy rooms, and here was a show worth seeing. We wish some of our fine dairymen of "Old Braintree," Mass., could just take a peep with us into friend Hicks' dairy. This is a fine two-story *wooden building*, entirely surrounded with large oaks, and closely sheltered from the sun and hot air. The upper story is used for various domestic purposes, and the lower for the dairy, or cheese room, (for cheese only is made here.) We were as much surprised as delighted at what was before us—a large centre table and two side tables running the whole length of the house (some 40 feet), covered with splendid cheeses ready for market weighing from 30 to 80 pounds, and some cheeses are made here as heavy as 100 pounds. We counted *two hundred and twenty-five cheeses* at this time ready for market, and we were informed by Mr. H. that for about *four months past*, he had sent to Sacramento *a ton of cheese per week*. At the present time, being the dry season, and milking a less quantity of stock, he sends only about 1000 pounds per week. Do our readers wish to know how this is done? we say to them. Mr. H. has *three hundred cows;* about one-half that number are now milked twice a day; some of the finest stock of the State is upon this ranch. There are *three thousand head of stock of all kinds upon it.*

After examining the gardens and orchards where we saw about five hundred fruit trees in fine order, we were entertained most courteously by Mr. and Mrs. Hicks, and enjoyed a dinner such as few could prepare, and claim it as a home production, and so elegantly and speedily prepared. Mr. Hicks and lady can truly be styled "Lords of the Creation." They "sit under their own vine and fig tree, with none to molest or make them afraid;" for their breadstuff, beef, pork, mutton and lamb, their game, butter and cheese, and fruits and vegetables, are all the produce of their own Ranch. This is what we call a true independence. We enjoyed their kind hospitality, had a pleasant visit, and went on our way rejoicing.

If our readers would like to see these fine cheeses, or purchase some of them, and have not time to visit the Ranch, just call at the fine warehouse of E. P. Figg & Co., J street, near Fourth, and your wish can be gratified.

Entrees for Premiums.

To President State Agricultural Society:

The undersigned would wish to enter for the Premiums of the Society his Farm and Gardens, and would wish to see the Examining Committee at such time as may suit their pleasure, believing that a variety of crops but lately cultivated in this country will give an interest to the examination. Respectfully, J. S. Curtis.

West Bank of the Sacramento, July 8.

Sacramento No. 1.

Sacramentans: As conductors of a public journal, as conductors of the only Agricultural Journal on the Pacific coast, as friends and advocates of "home industry," embracing as it does the Agriculture, and its kindred interests, of our country; these giving life and animation, vigor and success to manufacturers and the mechanic arts and these again giving a healthful support to our mercantile and commercial interests—we shall endeavor to show in succeeding numbers that the cause of the prosperity which now dawns upon this city results from this simple cause: the advance of her Agricultural interests: for Sacramento stands No. 1 in the State in this respects. We shall endeavor to show conclusively, also, that our citizens are those who, in a great degree, have been indentified with all her history from the beginning, and that they have labored to build up and sustain the homes of their adoption; that it is this untiring perseverance and industry, and consecration to this home, that has given them this renown, success and prosperity, in spite of all the calamities of fire and flood and disasters.

Sacramento will have an opportunity the coming Autumn to manifest her Industry and her skill in the arts, and it is to be hoped that the citizens, one and all, of both sexes, will feel an interest in the approaching Fair, and take an active part in it, and do what they can to promote it. Their interests are identified with it. Every merchant and mechanic will be affected by it, and surely the Press will take up this matter as the great lever that can aid the city in scattering intelligence upon all matters affecting her citizens.

We shall present in future numbers those houses of mercantile, commercial and manufacturing interests that have continued from '49 and '50, to the present time.

Great preparations are in progress for the best interest of our city, and we know these redound to those of the State.

Grasshoppers.

This devastating scourge has generally swept the entire Sacramento valley of all garden vegetables, and many surrounding counties have fared bad; so much so that it will be difficult to supply readily the demand for vegetables. San Francisco market will feel the influence of this in an increased demand for garden products.

We have received information of much damage to the fine gardens and ranches in Yuba county, and as we intend to examine them personally, we shall give a report of some. We know Messrs. Briggs, Brach, Sheppard, Wickersham, Swazey and others, have suffered largely, and we intend to examine particularly the ravages and all appertaining them.

In the "old countries" the people of the villages turn out, and gathering all the tin pans and kettles, they drum them effectually out of their grounds. We have heard of experiments here of various kinds—fire crackers, pebbles, dust, &c., and shall note all.

Agricultural Books.—Among the many aids to the agriculturist there are none more prominent than the valuable works that are spread before his mind in the form of a treatise, book or paper. Each perform a glorious work to the thinking and reflecting mind. The familiar letter published in the weekly Agricultural Journal, giving the practical results of an experiment by Mr. A. is read and acted upon by Mr. B., and by him additional information is gained for the next reader. A brief treatise upon a plant, tree, vine or shrub, calls into activity further practical efforts, resulting continually in the advancement. The well digested and thoroughly tested history of animals, the results of new machinery, the origin and value of the various products, together with all the various statistics necessary to comprise a volume, all are the lights that reveal the science in new forms, and the electricity that stimulates to still greater advancement. In this cause the publishers of valuable works on agricultural science are doing a great deal of good to our country, and should receive a just share of commendation and encouragement. Among the publishers of such works none are more prominent in our country than the house of C. M. Saxton & Co., of New York city, whose list of valuable works appear in our advertising columns.

Our neighbor Parker H. French, Esq., of the Tribune, left on Monday last in the Uncle Sam for Nicaragua. His message and business entirely disconnected with the distressing question of filibustering. We learn his absence will be but brief. We have always received kind and courteous treatment in our personal intercourse, and most sincerely wish our friend a pleasant trip, a prosperous journey, and safe return to his post and our city.

New-York Department.

J. C. Derby, New-York, has just published the *Star Papers*; or, *Experiences of Art and Nature*, by Henry Ward Beecher. The articles from which this work is made up, first appeared in the colums of the New York Independent, over the signature of a star, and by way of designation called "Star Articles." They are now put in book form as the "Star Papers," and cannot fail of being read with deep interest, especially the letters from Europe. These papers are brilliant, racy and entertaining, and full of striking thoughts, happily expressed. The book contains much valuable information, which has already created for it a most extensive sale.

new music.

Wm. Hall & Son, Broadway, New-York, have just published the following excellent pieces of *new music*, which we take pleasure in recommending to our friends:

Tell me Some Fond Name—Ballad from Wallace's beautiful romance, the "Village Maiden's Song."

Dinah is the Girl for Me—Song adapted to Wallace's beautiful melody, "Music Murmurings," sung by Wood's Minstrels.

The Hazel Dell, with variations by Wurzel—a pleasing arrangement of this beautiful and popular melody.

The Whisper of Love—Schottische by F. H. Brown, composer of "Pride Polka," "Early Dawn Polka," &c.

The Masonic Schottische—composed by J. A. Fowler.

The Miner's Tribute Waltz—composed by J. A. Fowler.

All the above pieces are by the best composers of the day, and will no doubt, have a wide circulation among our musical readers.

Horace Waters, the great music publisher, manufacturer and dealer in piano fortes, of 333 Broadway, New-York, has sent us the following sheets of popular music, published by him, with the catalogue of his new and popular works, for which we tender our thanks:

Sparkling Polka—by Thomas Baker—certainly one of the prettiest Polkas it has ever been our pleasure to examine or listen to. The title page is embellished with a beautiful illuminated vignette of the interior of the Publisher's music establishment.

Lilly White Schottische—arranged from the air of the "Lilly White" song, as sung by the Buckleys—by James Bellak.

'Tis Our Child in Heaven—by I. B. Woodbury—a beautiful and affecting song, into which this popular composer has infused a like character as to his other favorite productions.

Our Boys—Song, of the genuine Young America school—words by C. D. Stuart, Esq.; music by Thomas Baker; both of which are charming. For the benefit of our readers in general, and Our Boys in particular, we copy the words in full, trusting they will buy the piece and learn the melody:

Our Yankee Boys! the world is wide,
And search it as you will,
Our Yankee Boys the noblest are,
And best and bravest still;
The truest and the gallantest,
For knowledge, fun or fray,
And wide awake to beat the world,
Whate'er the world may say.
Our Yankee Boys, &c.

Our Yankee Boys are free and fair,
And kind of heart as true,
And stout of hand for peace or war
As ever nation knew;
To scorn the wrong, defend the right,
In truth and honor's name,
Our Yankee Boys contrived are,
And ask no prouder fame.
Our Yankee Boys, &c.

Our Yankee Boys! on sea or shore,
Their trophy splendors gleam,
They've taught the world that Freedom is
No poet's idle dream;
And under [illegible], their starry flag
Of [illegible] they [illegible]
The freedom [illegible] of men,
And every [illegible]
Our Yankee Boys, &c.

The New Kiln Dryer—Inquiries.

July [illegible] 1853.

Editor Farmer:—What of the Kiln Dryer? Has [illegible] yet been organized?

As I see nothing in the paper in relation to it, I presume it is not yet completed. I have recently viewed that established in the East are ready to furnish fruits to carry on this drying [illegible] are willing to work in an enterprise that would [illegible] you think a dryer [illegible] a reward?

Horticultural Department.

Is Pear Culture Profitable?

This is a question that cannot be answered properly in a few words, yet we are over and over again requested to answer it within the limits of a brief letter. We propose, therefore, to devote a short chapter to the subject now, in order to avoid the necessity of frequent and unsatisfactory replies hereafter.

Looking at the question in the abstract, we can say, without the slightest hesitation, that pear culture, for market, is profitable. Land of the finest quality for the purpose, situated in the finest fruit-growing districts of the United States, and of easy access to the best markets, can be purchased for from $50 to $100 per acre—varying with the value of the improvements, in the way of buildings, condition of the land, contiguity to railway stations, &c. This is one great point settled,—good cheap land, in a favorable climate, and all desirable facilities for marketing the crops at any season of the year.

As to the prices of pears, we need say but little; they are so high as to be the subject of general remark. In our most abundant pear month of the year, October, good pears, such as Virgalieus, sell readily at Rochester, in the orchard, at $5 per bushel, and in New York for nearly twice as much. A few days ago, Messrs. Curtis & Lincoln, of Boston, sent us a small box of Easter Beurres which, as they stated, sell readily in Boston at $2 to $5 per dozen. And it is well known that pear-culture around Boston is, and has for years been, a sort of *speciality* with nearly every man who has land that pear trees can be grown upon. Neither is it at all likely that prices will come down to a low figure in a great length of time; for the population, wealth, taste, and luxurious habits of living, are all increasing at such a rapid rate in every city, town, and village, in the country, that no moderate extension of culture can possibly keep pace.* Then it takes at least twelve or fifteen years to bring pears or pear stocks to that condition when their fruit may be taken into account. It is perfectly safe, therefore, to assume that pear-culture is not only profitable at present, but is likely to remain so for—we can not say how long.

It is altogether unnecessary to enter into any calculations respecting the cost of establishing and keeping orchards, or the probable produce of trees at a given age. This has often been done already, and the results, however they might vary according to circumstances, have invariably been encouraging to the planter. Our principal object now is to draw attention to certain causes which have already led to disappointment, and are likely to do so hereafter.

During the last seven or eight years, a large number of persons have engaged in pretty extensive experiments in growing pears for market, without possessing the slightest degree of experience in either that or any kindred branch of cultivation; and that too, without calling in the aid of any person having the requisite skill and experience, or of devoting to it their own personal care or direction. Engaged in some other pursuit, they have taken this up as a sort of speculation or investment, and have attempted to carry out their plans with such assistance as common field laborers are competent to give. It is scarcely possible that these persons could succeed in realizing their expectations, for although the culture of the pear in our soil and climate is a very plain and simple matter, yet it cannot be done on an extensive scale, in such a manner as to be satisfactory and profitable, except under good and skillful management. This is certain. There are various considerations that require to be well weighed and studied by one who has had experience. The soil must be suitable, the location eligible, varieties well adapted to the soil and other local circumstances, as well as to the markets for which they are grown. The trees must be properly planted, and afterwards pruned and trained, and the soil must be kept in good heart and good tilth about the trees. Insects have to be watched and destroyed; and a great variety of minor matters, accidents and incidents, must be encountered and provided for.

A common laborer, who might be a capital spademan or plowman, and who might very well take care of a crop of potatoes or corn, is no more competent to direct the management of an extensive orchard of pears, or any fruit trees, than he would be to conduct the machinery of one of the great cotton mills at Lowell. The planter may fancy that, being well read on the subject, he can in a short lecture, make it all plain to his laborer; but he is mistaken. We know from experience, that it is not an easy matter to make a good tree-cultivator with mere words, however explicit and forcible they may be. To plant a tree well, is an easy matter, no doubt. We know many amateurs who, by little experience, have become most successful planters—their trees live if they have a spark of vitality left when planted; while we hear hundreds of people complain that they have "bad luck" in planting—their trees die, or they don't grow, or there is something wrong. Thousands of trees are annually lost through errors committed by inexperienced planters; and in most cases it would be impossible for any one to discover where the error was, unless by pulling up the trees. They may have been planted too deep—the roots placed out of the reach of the genial and exciting warmth of the atmosphere, there to remain dormant for a season, and finally die. They may have been planted too shallow, and thus too much exposed to the heat and dryness of the atmosphere, or to the action of frost in winter. The roots may have been huddled in, all curled and twisted in unnatural positions, and thus checked in their attempts to recover from the shock of removal; or they may have been bruised and broken when taken up, and these mangled and decaying parts allowed to remain, instead of being carefully removed with a sharp knife. The tops may have been branchy and full, while the roots were meagre and defective, and yet no pruning given to restore the necessary balance. Then there are a multitude of little points that would appear to be scarcely worthy of notice, yet by no means unimportant to the future growth and vigor of the trees; but they can only be understood and appreciated after some degree of experience.

What we have said in regard to planting, applies with equal force to pruning. This must be done at the proper time and in a proper manner. A person who has not studied the nature and habits of a tree somewhat, is as likely to injure as improve its condition by the application of the knife. Only a few of those who profess to be gardeners, have learned to use their knife at once *wisely* and *well*. The head needs to be trained as well as the hand. The good pruner not only makes a clean, handsome, quick cut, but he cuts precisely what he should, and nothing more; and that, too, at the right time. We would greatly prefer to open the gates of our orchard, and let in a drove of cattle to browse on the branches, than allow such men to prune them as we have known to be entrusted with that duty.

Then again the cultivation and cropping of the ground, requires good judgment, as well as great care. Some people suppose that if they grow root crops, or such as require clean and constant culture, among their trees, that it will be all right. And so it would, if it were done in a proper manner. We are satisfied, however, that in a multitude of cases the young trees are so starved and stunted by allowing the intervening rows of root crops to encroach upon them, that they are permanently injured, if not ruined. We have known a very intelligent cultivator ruin an extensive young pear orchard by cropping the spaces between the rows, with corn. He took the precaution to leave an open space of several feet on each side of the rows; yet the injury arising from the exclusion of air, &c., was quite obvious in comparing the trees with others differently situated. We have seen others much injured by a crop of carrots: a small space was left between the roots and the trees; yet the result was a rich harvest of carrots, and stunted trees. Other rows of trees in the same plot, having no carrots between, made a luxuriant growth. The fact is, these root crops gather food from a greater breadth of ground than people generally suppose; and when the feeders come into contact or rivalry with those of a fruit tree, they are sure to become successful usurpers. In this matter we speak not only from observation, but experience. We sometimes plant strawberries among our specimen trees, in some cases allowing them to cover the ground; but during the drouth of last summer, and previous summers too, we found that where the strawberries had taken root thickly over the roots of fruit trees, that the leaves of the trees fell prematurely, and the fruit failed to reach perfect maturity.

Our intention now is not to dwell upon these points minutely, or give any practical instructions, but to call attention to the necessity of skill and judgment in the direction of fruit tree plantations, and to warn those who are planting extensively, with a view to profit, against the dangerous notion that any smart laborer may manage their trees. We do not of course wish to be understood as urging that any man who engages in the culture of fruit trees, must possess experience; but unless he does, and can devote his time to it, then he should employ a *competent* assistant. Far better do this than lose his capital, and have the mortification of seeing his cherished project become a failure and a discouragement to himself and all who see it, and then to raise bitter complaints against this one and that one who deceived him, either by selling him bad trees or by giving him false counsel.—*Rochester Horticulturist.*

The Jenny Lind Seedling Strawberry.

Mr. Joseph Beck, of Boston, Mass., gives in a communication to the Rochester (N. Y.,) Horticulturist, the following information relative to this species of the strawberry:

"There are so many new things constantly brought up before the horticultural world, and so much humbug about a great majority of them, that it is with some diffidence I present to the public a description of the Jenny Lind Seedling Strawberry. It has been exhibited for three successive seasons in the Massachusetts Horticultural Society's rooms, and the writer, a member of the Fruit Committee, has had frequent opportunities to test it with other varieties. It is entirely distinct from any other sort in cultivation here. It possesses many excellences, and, in my humble opinion, is worthy of general cultivation. One of our first confectioners, who deals largely in ice creams, and who has used this as well as other varieties of Strawberries to flavor them with, says it is the best sort grown for that purpose. This speaks well for its flavor. The Fruit Committee have repeatedly recommended it; and gentlemen who have seen it, speak in high terms of its appearance, and would gladly have paid a high price to be in possession of it; but as yet, the originator, Mr. Isaac Fay, of Cambridgeport, has kept it in his own hands. It will, however, be for sale this spring.

The seed from which it was obtained, was from a cross of Mr. Fay's old seedling and the Early Virginia. Fay's old seedling was a large strawberry but little known, and not considered equal to some other seedlings, and did not receive much attention, but possessed some good qualities, particularly the size. The Jenny Lind does not come up in size to this seedling, but is larger than the Early Virginia, and a most abundant bearer, ripening full as early, and equal to it in sweetness, if not superior. Out of more than two thousand plants obtained from seed, sown five years since, *this one alone* produced fruit the following summer; and it has continued to bear and increase in its good qualities ever since, flourishing equally in the shade as in the sun—some of the best fruit and plants having been under the thick foliage of fruit trees.

The plant is very hardy, with luxuriant foliage, sending out strong, stout runners. The leaves are quite large, on tall stems, and more serrated than common varieties. The blossoms are staminate; nearly all set fruit, and form well developed berries. The fruit averages well as to size, quite large, of a fine conical shape. The color is of a rich crimson. The surface of the fruit is smooth and glossy. Seed—considerably indented. Flavor—superior; good judges who have tested it, think it is not surpassed. It has ripened the 8th day of June for the last two years.

This strawberry will commend itself by its earliness and hardiness, by its beauty and high flavor, by its being an extraordinary and prolific bearer, and on account of the size and evenness of its berries."

Chinese and American Millet.

Dr. J. S. Curtis, of Sacramento, has exhibited at the Society's Rooms specimens of the above varieties of millet, and from the specimens shown, the Chinese will produce *double the quantity* of grass. The American will yield about six tons to the acre, and the Doctor thinks the Chinese will give *twelve tons*. Dr. C. will, upon threshing, weigh the seed of each crop, and this will test their relative value.

The Chinese variety is of a bright green foliage, grains golden color, long pendant branches, and also throwing heads from numerous joints below the principal head. It is a beautiful tasselled head, and yields a large quantity of seed and thus gives nutrition of great value, which is a large consideration in the value of the grass. The American changes to a brown, and is a compact long round head, filled with seed. Both samples can be seen at the Rooms.

We append the following article on millet, from the Rural New-Yorker, showing the important feature in its cultivation which arises from the *kind* cultivated:

"Messrs. Editors: In your paper of April 7th, I have read an article, under the head of 'Cultivation of Millet,' which, without an explanation, might lead some of your readers to embark in the cultivation of a crop in which they may be disappointed. There are the three species of *Panicum* cultivated as millet, besides two or three species of the *Sorghum* under the same common name.

"Two of those species, *Panicum Germanicum* and *Panicum Italicum*, have round heads, much resembling what the farmers know as pigeon grass. I have cultivated these two varieties in Western New York, but did not find them profitable. The common or German millet grows with a stalk four or five feet high, as large as a wheat straw and coarser, as feed for stock. The *Panicum Miliaceum* grows about three feet high, with a broad leaf at each joint, the stalk terminating in a panicle, somewhat like a loose panicle of Poland oats. There are two varieties of this species, one having brown and the other yellow buds. This species is found to be more profitable for cultivation than the two first named. From the small size of the stalk and the great proportion of leaves, cattle and horses seem more fond of the straw of this species than they are of best timothy hay.

"An acquaintance of mine, summer before last, raised one acre, from which he harvested and threshed thirty bushels of seed, and the straw he considered equal to three tons of timothy hay. I conversed with a farmer the past week, who raised it the last summer, who said 'his crop was considerably injured by the drought, yet he considered it the most profitable crop he raised upon his farm, as both his cattle and horses were more fond of it than they were of his best hay.' From the above, you perceive that the profit of the cultivation of this crop depends upon the species cultivated."

Wheat Crop—Statistics and Distribution.

As an article of commerce, wheat has been raised, in surplus, in several countries; but, taking the whole earth into view, *the production of wheat has never equalled the demand for it.* There have always been countries which, in pursuit of greater gain from other crops, or, in consequence of natural deficiencies, have not raised enough for their own food; and, if we equalize the crop, we shall find there has never been enough.

In giving the statistics of wheat in this country, we state, in advance, that the production of wheat in the interior of the United States, is of great consequence and interest to our western railways. A single fact will place this in a striking point of view. In the year 1854, the wheat crop of Ohio fell short of a fair average, 10,000,000 bushels. The whole of this was taken from the *surplus*—that which would have been carried to market. The consequence is, that a single railway fell short in its *freight business* to the extent of 70,000 tons!

The following is a table of wheat production in the United States for 1852, being found by adding the average annual increase to the census of the crop for 1849, and substituting the crop of Ohio, as ascertained by the State Assessors. In 1854, the crop was not as large as in 1852, by probably 25,000,000 bushels; a fact which has not been generally recognized in the noise which was made about the corn crop; but which is amply proved in the high prices. If, in 1855, (as is very probable,) the wheat crop should be a good one, it will be larger than that of 1852, so that year is the proper one to compare by.

Table of the Wheat Crop in 1852.

States.	Bushels.	Bushels to each Inhabitant.
Maine,	350,000	3-4
New Hampshire,	230,000	3-4
Vermont,	600,000	2
Massachusetts,	220,000	1-5
Rhode Island,	3,500	1-4
Connecticut,	50,000	1-40
New York,	15,000,000	5
New Jersey,	2,200,000	5
Pennsylvania,	17,800,000	7
Delaware,	350,000	5
Maryland,	5,200,000	9
Ohio,	22,300,000	11
Indiana,	7,200,000	8
Illinois,	11,000,000	11
Michigan,	5,800,000	12
Wisconsin,	5,000,000	15
Iowa,	1,800,000	9
Kentucky,	2,500,000	2 1-2
Missouri,	3,500,000	5
Tennessee,	2,500,000	2 1-2
Virginia,	13,000,000	9
North Carolina,	2,500,000	3
South Carolina,	1,200,000	2
Georgia,	1,300,000	1 1-2
Alabama,	350,000	1-2
Mississippi,	150,000	1-4
Florida,	1,200	1-40
Louisiana,	500	1-1000
Texas,	50,000	1-4
Arkansas,	250,000	1
California,	30,000	1-3
Aggregate,	123,925,200	5

This may be regarded as a *full crop* for the year 1852; and although, as in the States of Kentucky and Tennessee, the statement is in some instances low, on account of the *basis* in these States, the crop of 1849 being a deficient one, yet, in the main, it is very nearly correct.

Now, the fair allowance to each person in the United States, is five bushels, which is just the amount; but we have three millions of negroes in the South, and probably two millions of whites in the same region, whose bread-stuff is almost exclusively Indian corn. The allowance for the five millions is *twenty-five millions*, and supposing the stock on hand to be sufficient for seed, this is all, even *in a good year*, we have for export; but, what can we have from such a crop as the last? Absolutely nothing.

In the above are three classes of States, (as to the wheat crop,) divided as follows:

1st. *The surplus States.*—These are, Pennsylvania, Maryland, Virginia, Ohio, Indiana, Illinois, Michigan, Wisconsin, and Iowa.

2d. *States which supply themselves.*—These are, New York, New Jersey, Delaware, Missouri, Kentucky, and Tennessee. The last two States are included here, for reasons stated above, because their crops in the table are below their usual average.

3d. *States importing their bread.*—These are, Maine, New Hampshire, Vermont, Rhode Island, Massachusetts, Connecticut, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Florida, Louisiana, Texas, Arkansas, and California.—*sixteen States*, or more than half the American Union. These are the manufacturing, cotton planting, sugar, and mining States. These States find it, as they think, more to their interest to buy other people's bread, than to make their own.

In a common year, such as 1855, (with no blight on the harvest,) may be, the surplus States will export something like the following amounts of wheat, viz:

Pennsylvania,	5,300,000 bushels.
Maryland,	2,700,000 "
Ohio,	11,300,000 "
Indiana,	2,200,000 "
Illinois,	6,000,000 "
Michigan,	3,000,000 "
Wisconsin,	3,000,000 "
Iowa,	300,000 "
Virginia,	5,500,000 "
Total,	39,300,000

This is fourteen millions of bushels more than what can be afforded for foreign export; but this fourteen millions is what the manufacturers and planters eat, and enters only into the *internal* commerce; so does the whole amount of what is carried to foreign countries, that must be carried to port.

Of the above fourteen millions, about eight millions are consumed in New England, and the residue in the South.

We come now to the question, what is the *movement* of wheat in commerce? And what is the railway movement? It is not very difficult to ascertain this. We have about (as above,) 40,000,000 bushels exported from the producing

*Previous to 1850, the population of New York increased in five years, 144,405; Boston, 22,500; Philadelphia, in ten years, 150,725; Baltimore, in five years, 66,741; Brooklyn, in five years, 37,272; Williamsburg, in five years, 11,138. Between 1850 and 1855, the increase has undoubtedly been still greater in proportion. The interior cities and villages, as well as the rural districts, are increasing in population at an amazing rate. Cincinnati, in ten years, between 1840 and 1850, increased 72,000; and in the same period, Milwaukie sprung up from 1,9[illegible] 20,000, and Chicago from 4,000 to 30,000. See how new States grow up, like Minnesota and Kansas in a few years! without a bearing fruit tree.

States. *That* must all be carried off. Then we have the consumption of wheat in the large cities and towns of the producing States, which must be transported from fifty to one hundred miles. The population of these cities and towns amounts to about one and a half millions; and require about seven and a half millions of bushels for their consumption. We have then, this result of the wheat commercial movement, viz:

Foreign export,	- -	25,000,000 bushels.
Domestic export	- -	15,000,000 "
Consumption of cities and towns in producing States,		7,500,000 "
Aggregate,	- -	47,500,000

This is equal to 1,600,000 tons of freight. It is very easy to see from the above statement, where the great *ports for distribution* of wheat are. The principal ones are as follows: Philadelphia, Baltimore, Richmond, Pittsburgh, Cleveland, Sandusky, Toledo, Detroit, Milwaukie, Chicago, St. Louis, and Cincinnati. In a common wheat year, such as 1852, 1853, and as we suppose, we shall soon have again, the shipments from these ports that will verify the above tables, in every particular. Boston, New York, New Orleans, &c., *handle* a great deal of wheat and flour, but they are not *original* shipping ports of this article at all.

In a short time, we expect to show the whole agricultural export of Ohio, for 1854.—*Mansfield's Railroad Record.*

Miscellany.

NIGHT.

Sweet, sweet the hour of closing day
When night comes on apace,
And with its dark, and sombre veil,
Enshrouds fair natures face;
While, one by one, the twinkling stars
Come forth, so clear and bright;
And seem but one vast bed of pearls,
Beneath the moon's soft light.

Oh! then I love to wander forth,
And cast off worldly care,
And catch upon my burning brow
The cooling, midnight air,
That comes through scented groves and bowers,
With swift yet unseen wings,
And from some bed of flowerets sweet,
The choicest perfume brings.

Yes, 'tis an hour I dearly love,
When nature is at rest;
For then sweet intercourse I hold,
With thoughts within my breast;
Then, sorrows that at times seem great,
A form less hideous wear,
And trials, that each day brings forth,
Appear less hard to bear.

'Tis then I think of days gone by,
When, joyous as a bird,
With gladsome shout, and merry laugh,
In sports my voice was heard;
Oh! that I could those hours recall,
With all the joy that's fled,
The friends, too, of my youthful days,
Now numbered with the dead.

But no! those bright and blessful days
I never more shall see;
The memory of their joyful hours
Is all that's left to me;
But, when *my night* of life draws near,
And I from earth must part,
The thoughts of friends I hope to meet,
Will cheer my drooping heart.

England and America.

The tenor of certain articles which have of late made their appearance in the Times, would seem to indicate that there exists across the Atlantic, in the breasts of our near relations, the inhabitants of the United States of America, a feeling of hostility to us, our institutions and undertakings, and a feeling of sympathy with our Russian antagonists. We do not believe it; but, on the contrary, we believe that blood is thicker than water, or in this case we might say than oil—that though the Yankees might have no objection to have a shot at us themselves, they wish no other people in the world to do so with success—that republican liberty can never sympathise with despotism—enlightened intelligence with hopeless ignorance—progress with obstruction—that the antagonism of qualities and races and institutions between Russia and the States is a gulf too stormy to be passed, and that the ties of kindred blood and kindred sentiment between the States and Great Britain are too strong to be easily or lightly severed. Should it ever be otherwise; should it ever unfortunately come to pass that this country shall be placed in a hostile position to America; or should we even witness the untoward event of American sympathy with our opponents, or its absence from ourselves, we cannot imagine a consummation more unpropitious, or more calculated to damage our influence and our cause in the eyes of the whole civilized world.

Will it be believed that we, or at least the small fry who represent us, are doing their best to bring about this state of bitterness; and that the rumors of American indifference to our success, or of sympathy with our enemies, have their origin, not in the acts of our brethern, but in the contemptuous slights and callous indifference of ourselves? The promptings of an evil conscience inform us that we have merited the resentment, the existence of which we are beginning to assume; and that a persistance in the studied insolence with which the friendly advances of our transatlantic brothers seem to be received, may possibly at no distant period convert these rumors into facts. Several instances of the species of conduct to which we allude have lately been brought under our notice; but we shall content ourselves for the present with the mention of two.

The Morning Post can testify to the courtly career of every whiskered, bearded, baggy-breeched aide-de-camp or envoy from Pumpernickel or Schlaugenfat, whose business or whose pleasure leads him to visit the capital of England. A special train receives him at Fulkestone; a court-carriage at London bridge. He is presented to her Majesty by the minister; his name is inserted in the Lord Chamberlain's album for royal banquet, concert and ball; he appears at the receptions of secretaries; and, as a necessary sequence, he runs the gauntlet of aristocratic hospitality and ostentation in crescent, lane and square, from St. Something in the East to St. Somebody in the West, till a surfeit of soups, lobster sallads, and Lafitte, drives him back with an indigestion to the baths and Brunnens from whence he came. We find no fault with his reception—reception though it be of the envoy or banger-on of a phantasmagorian kingdom or dukedum, whose treasury is a gambling house, whose territory is a fisherman's walk, and whose army is an officer. "While we feast the great, let's ne'er forget the small." Great Britain can afford to allow Lilliput to stalk powdered and pigtailed across her palm. But while she rains hospitality and consideration on the small, ought she to reverse the caution of the song, and utterly despise, neglect and ignore the great? We think not.

In the month of March last, three of the American veteran officers of the Mexican campaign, in the three several departments, of engineers, artillery, and cavalry, selected from the gallant army of the United States by the President and his Cabinet, as worthy from their talents and services, to represent their countrymen, were directed by the Government of the States to proceed to the Crimea, for the purpose of studying the art of war. The names of these officers were, and are, Major Richard Delafield, of the Engineers; Major Mordecei, of the Artillery; and Captain Maclellan, of the Cavalry. Did they proceed to the Russian lines, where the art of war can be studied quite as effectually as in our own, to which they would have received and would still receive, a hearty welcome—and with which nation they are falsely represented to sympathise? They did not. They arrived in England with letters from the British Minister at Washington, authenticating their mission, and which were presented by them last month to the Foreign Secretary in London; but beyond a civil reception—which we believe Lord Clarendun vouchsafes to all men,—an interview with Sir John Burgoyne, and letters of recognition to the authorities in the Crima, no notice whatever was taken of them or their mission. No special train received them Liverpool; no court carriage at Euston-square; no presentation to Majesty; no inscription in the chamberlain's open-sesame; no pasteboard for minister's reception or aristocratic soiree,—and the only surfeit which they received, was a surfeit of neglect and disgust, which they have doubtless carried with them to the Court of France, whither they have bent their steps, and which it will assuredly defy all the baths and Brunnens of Pumpernickel to remove.

Toward the end of last summer the United States sloop-of-war Preble, arrived at Spithead. It is a rule in the American navy that all the naval cadets, who compose the material out of which are fashioned afterwards the naval commanders of the Republic, shall serve their time before the mast; and a good and wholesome rule it is, for reasons too obvious to descant upon. The Preble, a training-ship for this purpose, and manned almost exclusively by young gentlemen from among the most respectable families in the States, to the amount of two hundred and upwards, came to Spithead for the purpose of naval education. She happened to be the only man-of-war on the station at the time, and her presence on that account, and on account of the frequent opportunities which she had of saluting the Royal Yacht, was made more than usually conspicuous. She was left wholly unnoticed by the authorities of Portsmouth, her cadets were refused admission to the dock-yard, and she ultimately left the station, with two hundred young naval hearts, the future upholders of their country's naval fame, fully impressed with the nature of their reception in their father-land.

These are two instances of the pains which are taken by our representatives to secure for Great Britain the sympathy of the United States. We have others at command; but we conceive the foregoing quite sufficient for our present purpose, and we pledge ourselves to the accuracy of the details. We can also tell our readers how her Majesty's sloop-of-war Pearl, sailed from Bermuda, in the winter of 1839 or 1840, with despatches entrusted to her gallant commander, Lord Clarence Paget, for the United States government; how she experienced a succession of gales on her passage; how she arrived in the Chesapeake Bay with battered hulk and exhausted crew; how the naval authorities of Norfolk, the Portsmouth of the States, sent shipwrights and riggers on board; how the good ship was refitted without charge or demand of any kind; and how the British officers and crew were welcomed and feasted on shore. It is fresh, too, in the recollection of the public, how two Russian men-of-war were refitted and repaired at Portsmouth last year, their officers received with marked consideration, and the dock-yard thrown open to Russian pencil and pen! There was a Prussian man of war (the Gafoo) at the same period which was similarly favored, but then, to be sure, she was commanded by one the royal family!

We would call the attention of the new association which has been started in England, having taken, as we think, a leaf from the book of her elder sister in Scotland—for putting the right men in the right places—to the reprehensible proceedings, or rather the outrages on the common decencies which we have detailed. Surely no Briton can approve them, no gentleman support them, no being outside of Bedlam adopt them. We cry shame upon the Yankees for their supposed sympathies with Russia. Let us look at home and blame ourselves for their origin.—*Caledonian Mercury.*

Want of Room.—What a little world this is of ours! How our elbows get bruised for want of room! No man owns a farm large enough, and as fast as the farmer accumulates means, he buys out his neighbor. Some even indulge the hope of buying all the land adjoining their's, in a few years. So of every thing. No steamboat was ever large enough to accommodate all the passengers, and the largest ones need more room the most. "Give us more room!—more room!" is the expression in every one's month. Buildings are torn down, and larger ones built, and if in this way it ever does happen that there is room enough inside the house, it is soon discovered there is a great deficiency without. Some try to avoid the inconvenience of being crowded, by taking the whole world for their house, but even they become dissatisfied, and the first opportunity commence building an addition. One addition calls for another, and the larger the house, the more chance for improvement. The United States form a great country, but there is no room to spare. California is said to be roomy, and away hasten thousands, pell mell, hoping to reach the land of promise before all the room is taken up. But it unfortunately happens, there is no room on the way—no room on steamboats—no room at the hotels, and a scarcity of "rooms to let."—*Ex.*

English Gardens in Russia.—In about a month's time there will be immense crops of English vegetables growing in the vicinity of the English hospitals in Turkey, and in the Crimea, for the use of the sick, as well as large crops of vegetables and grasses in the neighborhood of Balaklava and Sebastopol. Mr. Page, the seed merchant of Southampton, who has been selected by the government to stock the English possessions in the Crimea with herbage and vegetables, states that the whole of the immense stock of seeds he sent out in the Medway, will be up in about three weeks after they are planted. The seeds of those vegetables which grow quickest, were sent out in the largest quantities. A great many varieties of the following vegetables were sent out in the Medway, viz: Beans, peas, broccoli, cauliflowers, cabbage, carrots, celery, cress, mustard, cucumber, endive, leek, lettuce, onions, parsnips, turnips, and pot herbs. A very large quantity of Italian rye grass seed, was also sent out, that being one of the earliest and most productive of grasses, yielding enormous crops of quickly succeeding herbage. Seeds for permanent pasture, were also sent.

Dimensions of Heaven.—"And he measured the city with the reed, twelve thousand furlongs. The length, and the breadth, and the heighth of of it are equal."—Rev. 21: 16. Twelve thousand furlongs, 7,920,000 feet, which being cubed, is 496,793,088,000,000,000,000 cubic feet. Half of this, we will reserve for the Throne of God, and the Court of Heaven, and half the balance for streets, leaving a remainder of 124,198,272,000,000,000,000 cubic feet. Divide this by 4,096, the cubical feet in a room 16 feet square, and there will be 30,321,843,750,000,000 rooms. We will now suppose the world always did and always will contain 900,000,000 inhabitants, and that a generations lasts 33 1-2 years, making 2,700,000,000 every century, and that the world will stand 100,000 years, making in all 270,000,000,000,000 inhabitants. Then suppose there were 100 such worlds equal to this, in number of inhabitants and duration of years, making a total of 27,000,000,000,000,000 persons. Then there would be a room 16 feet high for each person, and yet there would be room.

Influence of Steam.—President Hitchcock says that there are in Great Britain at the present day, 15,000 steam-engines driven by means of coal, with a power equal to that of 2,000,000 of men; and thus is put in operation machinery equalling the unaided power of 300,000,000 or 400,000,000 of men. The influence thus emanating reaches the remotest portion of the globe, and tends mightily to the civilization and happiness of the race.

Falls of Niagara.—The gross power of the Falls of Niagara is, according to Blackwell's observations, equal to that of nearly seven millions of horses; others, from different data, make it as high as ten or twelve millions, and even more. In fact, taking into account the constancy of its operation, the effort of this great cataract will bear a comparison with that of the entire adult laboring population on the face of the globe.

The term *Bas-relief* is often mis-applied. In sculpture it designates figures which do not stand out far from the ground or plane on which they are formed. When figures do not protuberate so as to exhibit the entire body, they are said to be done *in relief;* and when they are low, flat, or little raised from the plane, the work is said to be in *low, or bas-relief.* When the figures are so raised as to be well distinguished, they are said to be in *bold, strong high,* or *alto-relievo.*

Convince a wise man of his error, and he will thank you; convince a fool, and he will insult you.

Ladies' Department.

[For the California Farmer.]

Rural Laya—No. 5.

BREAKFAST.

Can feasts of Mayors or Aldermen afford
Such unbought dainties as our country board?*
Could silly simpletons, of such who prate,
But breakfast here, they would not talk of state.
Here stands a steak of tenderloin, so nice
An epicure might eat, nor care for spice;
There ham and eggs the mutton chops beside;
While tripe and salmon equal calls divide;
With soft boiled eggs as many as you please;
And, at their proper season, lamb and peas;
And morning rolls; and butter churned at night,
All cool, and hard, and fresh, and worked aright:
While tea and coffee, round and round, are served,
Without the fear of thereby being unnerved.
And still my Uncle laughs, and talks to me
Of how, he thinks, such breakfasts can't agree
With lads, who daily drudge, and do not know
The proper order in which food should go;
Says, that in different strata, it must lie,
In wise succession ranged, and how that I,
By careless eating, may get plump and fat;
And tease so by such unmeaning chat,
I sometimes wish, but that I need not say,
Because I do not, Uncle were away.
The lads all laugh; and still he teases so,
That what to do, or say, I do not know.
But this I know, I've often heard him boast
Of glorious breakfasts, which did nothing cost;
And sometimes, when he thought I did not hear,
Say none could cook like me, or far, or near;
How every thing I did was done so well,
That how I did it baffled him to tell.
To hear myself so praised, inspires a flame,
By care in cooking to arrive at fame.
You laugh, but, really, breakfasts nice and warm,
In chilly morning, never yet did harm;
And many an old man thinks a thrifty wife,
Who knows to cook, the greatest charm in life.
You call me vulgar, tell me not to say
Such things as these, in such a common way;
But learn to mouth them, in unmeaning phrase,
And mince, and choose, and copy, all my days,
Like a big baby. That I ne'er will do,
Though there are, doubtless, some who think with you.
But, while we speak, our lads are all away;
So let us talk of this some other day.

Betty Martin.

*[It is probable this is a mere coincidence. Horace has "*ruris inemptæ dapes,*" but it is not likely that Betty reads Horace.—Ed.]

Valuable Recipes.

Butter Beans.—Having shelled them, drop them into cold water; as the water boils, add salt. Try with a spoon, and when done, serve up with melted butter.

Beets.—No knife should ever touch a beet previous to boiling; rub the leaves off by hand, for if there is a wound made in the beet, the best of its juices will be lost in boiling. Drop the beets into boiling water, with a handful of salt. Most cooks take beets from the boiling kettle and place them in cold water, for the ease with which the skin peels off. This should never be done, as they part with one-half their flavor. When taken from the pot, let them drain, then peel and slice them, butter, pepper and salt them, or pour good vinegar over them, which many prefer.

Cucumbers.—Who ever heard of cooking a cucumber? we hear readers exclaim! Try it; and then tell your neighbors how well a poor man may live in this country. Take the cucumber just as it begins to turn yellow, peel and slice it into salt and water; drop it into cold water, and boil until tender. Season with salt and pepper—mix with batter and fry. Few can tell it from egg plant.

To Iron Velvet.—Having ripped the velvet apart, damp each piece separately, and holding it tightly in both hands, stretch it before the fire, the wrong side of the velvet being towards the fire. This will remove the cresses, and give the surface of the material a fresh and new appearance. Velvet cannot be ironed on a table, for, when spread out on a hard substance, the iron will not go smoothly over the pile.

Wholesome Beverage.—Take of the best white Jamaica ginger root, (bruised) two ounces; cream of tartar, one ounce; water, six quarts; to be boiled for about five minutes, then strained; to the strained liquor, add one pound of the best white sugar, and again put on the fire and keep stirred until the sugar is perfectly dissolved; then pour into an earthen vessel, into which has been previously put two drachms of tartaric acid and the rind of one lemon, and let it remain until the heat is reduced to a luke-warm temperature; then add a table-spoonful of yeast, stirring them well together, and then bottle for use, the corks of which must be well tied down. It will be in high perfection in a few days.

Burying Bees for the Winter.—Enoch E. Kalb, of Lottsville, Virginia, states that, having a swarm of bees, last fall, which had no honey, and not knowing if they would live over the winter, he buried them, air-tight, on the warm side of a hill, in a case sufficient to keep all dampness out, and, as soon as he uncovered them this spring, they were full of life and vigor, and instantly set at work, and are doing finely.

Love.—The sweetest—a mother's love; the longest—a brother's love; the strongest, a woman's love; the [illegible]—a man's [illegible] and the sweetest, longest, strongest, [illegible]—a love of a bonnet.

Friendships which are [illegible] are made [illegible] formed in haste.

Grain at the East.

GREAT interest is being felt relative to the shipments of grain and produce from this country; it will have the effect to open the eyes of people to our resources.

By last accounts we note that the late rains in Kentucky and Georgia have given a more hopeful prospect of a crop, while in New York and Pennsylvania an abundant harvest may be expected. In other States the crops appear to have received some check.

We notice, too, that in Vermont the caterpillar has committed sad havoe upon the apple, and in Massachusetts the frost has nearly ruined the peach. In other places other crops are coming short; yet withall the crops will be a general average.

We have confidence still that the prices of grain will hold and rule high, and we hope the *farmers* will have the benefit of it.

The ruling prices of Grain here are as follows: Wheat, best, 2½c; Barley, new, $1 15@$1 20 ₱ 100 ℔; Oats, 1¾c. Potatoes bring 1½@1¼c, according to quality.

CALIFORNIA FAVORS.—We have before us a very large and handsome collection of magazines, pamplets, foreign and domestic pictorials, and journals most kindly sent to us by Messrs. S. W. Murray & Co., booksellers and stationers, San Francisco. We can only express our grateful acknowledgements and say—"the liberal devise th liberal things, and by liberal things they shall stand." We know the liberal hearted will not forget the well known and fully supplied warehouse of Murray & Co., San Francisco.

We are also obliged to the attentive messengers of Wells, Fargo & Co., and the Pacific Express Co., for a supply of exchange papers, packages, &c.

HUNT'S FORCING POMP.—This new power is most admirably adapted to this country, and we would call the especial attention of our readers to the card of the proprietor. We should judge by the description, which is well authenticated, that it will be eagerly sought for here. Drawings, plans, &c., together with cost and other particulars, we shall be able to give after the next steamer.

TO CORRESPONNENTS.—"Hard Times," was received too late for this issue. Also, "Destruction to our Fields," with other matter, which will appear in our next.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the President,
v3-26 C. I. HUTCHINSON.

Brooklide, Feb. 5, 1851.

To SETH W. POWLE:

My Dear Sir—Having experienced results of a satisfactory character from the use of WISTAR'S BALSAM OF WILD CHERRY, in cases of severe colds, during the past two years, I am induced to express the full faith I have in its renovating power.

I was first induced to try this medicine as an experiment, about two years ago, in connection with the strong recommendation of a friend, who was well nigh gone with consumption, and whose relief from the use of it satisfied me of its great value in cases of colds and decline, and most clearly demonstrating, to my mind, its great value as a restorative, that only needs a fair trial to insure a grateful demonstration from the public. Your obedient servant,
SAMUEL A. WALKER.

*** Be sure it is signed I. BUTTS on the wrapper.
Agents for San Francisco, B. B. THAYER & CO.
Sold by all Druggists. v4-2

☞ "Hope Never Dies."—Read the following tribute to WISTAR'S BALSAM from the Kinderhook (N. Y.) Sentinel, dated July 21:

"A remarkable cure of Consumption has recently been effected by this medicine, in the town of Chatham, in this county, and which was related to us by Dr. Herrick, an eminent physician of that town, to whom we have permission to refer. A young lady, who had long labored under an affection of the lungs, was considered by her friends as beyond the reach of medicine, and she was informed by her medical attendant that she must die. She was induced to send for a bottle of WISTAR'S BALSAM OF WILD CHERRY, as a last resort. The young lady experienced great relief, and two more bottles were successively procured and administered. She is now happy in the restoration of health."

Sold by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

MARRIED.

On the 2d July, by Rev. Oscar P. Pitzgerald, Felix E. Dreyfous and E Tindall, all of Sonora.

On the 11th July, in San Francisco, by Justice J. G. Pearson, Thos. Riley and Miss Susan Somers, all of that city.

On the 12th July, in Benicia, Fleming Amyx, of Tuolumne county, and Miss A. Amille De Lome, of Genoa, Switzerland.

On the 10th July, at Mokelumne Hill, by Justice Thompson, Wm. Lenz and Catharine Zahlor, all of San Andres.

DIED.

On the 12th July, in San Francisco, Joseph Coleman, of Nantuckat, aged 52 years.

On the 12th July, in San Francisco, Matthew Lindley, aged 31 years.

☞ Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

C. M. SAXTON & CO.,
AGRICULTURAL BOOK PUBLISHERS.

C. M. SAXTON & CO., 152 Fulton street, New York, offer for sale the following late and valuable publications:

DOWNING'S (A. J.) LANDSCAPE GARDENING. A treatise on the theory and practice of landscape gardening. Adapted to North America, with a view to the improvement of country residences, comprising historical notices and general principles of the art. Directions for laying out grounds and arranging plantations, the description and cultivation of hardy trees, decoration accompaniments to the house and ground, the formation of pieces of artificial water, flower gardens, etc., with remarks on rural architecture. Elegantly illustrated with a portrait of the author. By A. J. Downing. Price, $4.

THE PRACTICAL FRUIT, FLOWER AND KITCHEN GARDENER'S COMPANION, with a Calendar. By Patrick Neill, LL.D. Adapted to the United States, from the fourth edition, revised and improved by the author. Edited by G. Emerson, M.D. With notes and additions by R. G. Pardee, author of "Manual of the Strawberry Culture." With illustrations. Price, $1 25.

MUNN'S (B.) PRACTICAL LAND-DRAINER; being a treatise on draining land, in which the most approved systems of drainage are explained; with full directions for the cutting and making of drains, and with many illustrations. By B. Munn, Landscape Gardener. Price 60 cents.

ELLIOT'S (F. R.) AMERICAN FRUIT-GROWER'S GUIDE in Orchard and Garden; being a compend of the history, modes of propagation, culture, &c., of fruit, trees and shrubs, with descriptions of nearly all the varieties of fruits cultivated in this country; and notes of their adaptation to localities, soils, and a complete list of fruits worthy of cultivation. By F. R. Elliot, Pomologist. Price, $1 50.

DADD'S (GEO. H.) AMERICAN CATTLE DOCTOR; containing the necessary information for preserving the health and curing the diseases of oxen, cows, sheep and swine, with a great variety of original receipts and valuable information in reference to farm and dairy management, whereby every man can be his own cattle doctor. By G. H. Dadd, M.D., Veteriuary Practicioner. Price $1 25.

New Patent

Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-3 3m.

v3-26 BRADSHAW & CO.

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years,* without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st1 C. M. DAVIS, Proprietor.

Wilson's Exchange,
By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estobrook has formed a connection in business with Mr. P. T. JAMES, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v3-25

Rassette House.

Benicia Iron Works.

STEAM ENGINE, BOILER AND MACHINE SHOP.—This establishment is now in successful operation, and offers to the public facilities equal to any in the United States, for manufacturing or repairing Steam Engines of the largest size, Boiler Wares, Brass Castings, Mill Gearing of the most approved patterns, Bloom Iron, Cast Iron Columns, Window Caps or entire fronts.

Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State.

The company have extended their Pier, and erected a large crane for the accommodation of their customers.

For further particulars apply to
FORBES & BABCOCK,
Agent P. M. S. Company,
corner Leidesdorff and Sacramento streets, San Francisco;
or to CHARLES FRENCH,
v3-c8 Resident Engineer, Benicia Works

Important to the Dairymen of California.

HORACE GUSHEE, No. 51 Washington Market, wholesale and retail dealer in Fresh Butter, Cheese and Eggs, having been engaged in the sale of the products of the dairy for the past two and a-half years in San Francisco, would take this opportunity to return his thanks to those who have favored him with their business, and respectfully solicits a continuance of the same. Consignments from any part of the State by any of the various packets or steamboats, directed to me, will meet with prompt attention, and proceeds of sale forwarded as directed. Liberal advances made, if required.

Dairymen, whenever in the city, are invited to call and see the various kinds of Butter and Cheese which are received daily from the ranches. v3-26

First Premium Daguerreotypes.

R. H. VANCE just awarded the FIRST PREMIUM for the best Daguerreotypes exhibited at the California State Fair. Mr. V. would be happy to wait upon any one wishing a PERFECT LIKENESS. The arrangement of his Rooms and Lights are superior to any in the State.

Rooms—New Building corner of Sacramento and Montgomery streets, entrance on Montgomery street, next door to Austin's. v4-1

Varieties

WHY is a pretty girl like a steamboat? Because she always has a swell after her.

WHEN is a pretty girl inclined to commit murder? When she is bound on a sleighing expedition.

NEXT to suicide or marrying an opera dancer, starting a newspaper is the most rash of human actions.

BE slow to choose a friend and slower to change him, courteous to all, intimate with few; scorn no man for his poverty; honor no man for his wealth.

NEARER HOME.—How few of us realize that as we rise each morning, and commence our various avocations, that we are one day nearer our final home.

A JOLLY farmer returning home in his wagon, after delivering a load of corn, is a more certain sign of national prosperity, than a nobleman riding in his chariot to the opera or the play-house.

WHOEVER is apt to hope good from others, is dilligent to please them; but he that believes his own powers strong enough to force their own way, commonly tries only to please himself.

A cow was lately killed at Elgin, Scotland, and a shoemaker's awl found embedded in her heart. The animal had been previously in good health, and gave the ordinary quantity of milk.

THE prize for the best essay "On Steam and Animal power" has been awarded by the Bath and West of England Agricultural Society to Mr. William Moreland, who is not yet 19 years of age.

THERE are many who waste and lose affection by careless neglect. It is not a plant to grow unnurtured; the rude touch may destroy its delicate texture forever—the subtlo chords of love are chilled and snapped asunder by neglect.

A YOUNG person thinks it is enough to do right. As he grows older, he finds it necessary to satisfy others that he has done so. Much of the time that might be spent in doing well must be used in securing evidence that we have not done ill.

SENECA says the greatest loss of time is delay and expectation which depends upon the future. We let go the present, which we have in our power, and look forward to that which depends upon chance—and so quit a certainty for an uncertainty.

ONE afternoon as the express train came near Mainville, Pa., a pugnacious bull who was on the track showed fight against the locomotive, but the "iron horse" came off victor, running over his bovino antagonist with all the ears and killing him *to pieces*.

EXCERPTS.—There is a medium between an excessive indifference and too universal a confidence. If we have no foresight, we are surprised; if it is too nice, we are miserable. The apprehension of evil is many times worse than the evil itself; and the ills a man fears he shall suffer, he suffers in the very fear of them.

THE following from Prentice, of the Louisville Journal, sustains his reputation: Two or three papers in the interior of Kentucky, are occasionally attacking us, and a friendly correspondent asks why we don't "castigate them." The truth is, they are altogether too small. A woman once handed her crying baby to her husband, requesting him to make it hush. It continued to cry till she got out of patience, and then she called to her husband, "I do wish you would spank that baby." "Yes," said he. He fumbled about for some time, and at length she angrily exclaimed—"Aint you going to spank the baby?" "I would," he replied, "but, indeed, wife, *I can't find any place big enough to spank.*"

Now is your Time to Buy Cheap Goods!

HAMBURGER & BROTHERS, who have been established in this city since 1850, and well known all over this section of country, take pleasure to inform their friends and customers in general, that they have now in store, and receiving in addition by every clipper and steamship, from New York, a general assortment of Fancy and Staple Dry Goods, consisting of plain black and brocade Silks; plain, changeable and plain colored Silks, fall qualities; French and American Lawn; white and colored plain and embroidered Swiss Muslins; Barèges and Silk Tissue of all colors and prices; Needle Worked Bands, Collars, Sleeves, Chemisetts and Linen C. Handkerchiefs; Swiss and Lace Curtains.

A large assortment of all kinds of Bonnet Ribbon, Irish Linens, Cotton Shirting and Sheetings of all styles. Ladies white and colored Cotton Hose; Kid, Silk and Lisle Thread Gloves. With a general assortment of Fancy Goods too numerous to mention, which we offer to sell at twenty-five per cent. cheaper than any other house in this city, as we are direct importers of our goods.

A call is only necessary—you can judge for yourself.

☞ Ladies are particularly invited to call.

Store, 91 J street, near Fourth, Sacramento.

P. S.—We keep constantly on hand a full supply of Silk and Straw Bonnets, and all kinds of Millinary Goods. v3-25.

Latest Importation.

WE would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of

STAPLE AND FANCY GOODS,

which have been received direct from the manufacturers and importers the past week, per clipper ships "Flying Cloud," "Samuel Russell" and "Red Rover," which, in addition to our former stock, makes it by far THE LARGEST IN THE STATE OUT OF SAN FRANCISCO! And for quality and cheapness, we defy competition; and we say, without fear of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.

200 Parasols, new, rich and beautiful;
100 ps. latest style Bonnet Ribbons and Trimmings;

Ferry Notice.

NOTICE is hereby given to all persons interested, that the undersigned will apply to the Board of Supervisors of Sacramento county, on the 12 h day of June, 1855, if said board shall then be in session; if not, then on the first day thereafter that they shall be in session, for a renewal of his license to keep two ferries across the American river; one commonly known as "Hoyt's Ferry," near where 28th street of Sacramento City intersects said river; and the other commonly known as the "Middle or Muldrow Ferry," about two and one-half miles from said Sacramento City. SAMUEL NORRIS.

Sacramento, May 10th, 1855. v3-24

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIN, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,
Proprietor, Boston, Mass.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself *principally* to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and *Hospitals*, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus;) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

PACIFIC EXPRESS COMPANY.

THE late employees of ADAMS & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal energies.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.
San Francisco, March 1st, 1855. v3-10.

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

Pottery! Pottery!!

NOW ready and for sale at the SACRAMENTO POTTERY, on J street, near Sutter's Fort, a large assortment of Plain and Fancy Flower Pots; Butter, Preserve, Bread and Cake Jars, with covers; Cream Pots, Churns, Milk Pans, Jugs and Stovepipe Sales, of superior quality; with everything else in the line. Wares made to order. Dealers are particularly solicited to call and purchase. Orders to be left at the Pottery, or No. 264 J street.

AGRICOLA'S LETTERS.—NO. 10.

On Stall-feeding of Animals.

EDITORS FARMER: In Letter No. 4, I recommended Potatoes as a substitute for Turnips, in in Stall-feeding. I now return to the subject; but, before doing so, offer a few remarks on Animal Physiology, to enable us to understand more perfectly what we have got to do.

Food, when taken into the stomach, is dissolved by the gastric juice into "chyme"; which "after receiving the pancreatic juice, the bile and mucus, passes along the intestine, where the absorbents or lacteals, take up the fluid part, leaving the insoluble portions. The chyle, or absorbed fluid, is partly conveyed into the abdominal veins, and partly made to pass through numerous glands (in which process it loses its acid re-action, becoming alkaline) from which it proceeds to the thoracic duct, and is, with the lymph, poured into the vena cava, to mix with the venous blood."* From the right ventricle of the heart, the blood, collected from all parts of the body, passes with considerale force to the lungs; where, meeting with the oxygen of the atmosphere, it is thereby purified, and deprived of a large quantity of carbon, which it had acquired in its passage through the body; and changes its color from a dark red to a bright crimson. The blood so changed leaves the lungs, and enters the left ventricle of the heart, whence it is forced along the arteries towards the capillaries at their extremeties, where it resumes its dark color from the absorption of carbon. At one time, the opinion prevailed among physiologists that animal heat was produced from some nervous effect on the muscles, which is now abandoned. Then, that it was produced entirely in the lungs, from the contact of atmospheric air with the elements of food in the blood. This opinion soon gave way to another, that it was entirely produced in the capillaries, where the blood undergoes its change of color. This opinion equally extreme is now at a discount, and the more rational belief is generally entertained, that it is produced in different parts of the body, but chiefly in the capillaries and lungs. Let us see how far this opinion is borne out by facts. There is no doubt that the carbon in the blood, by which its discoloration is occasioned, is produced by the destruction of the animal tissues in the capillaries by oxygen, in addition to whatever portion of it is thus, and there, separated from the carbonaceous elements of the food or fat. But we must not forget that the skin possesses respiratory powers as well as the lungs, and that, by means of an innumerable quantity of little pores, it is enabled to furnish the outer portion of the body at all events with a sufficient quantity of oxygen to so far oxidize its carbon, wherever obtained, and thereby furnish it with heat. But after all, the air so furnished is but limited, and the place where the fluid is consumed very close, and we may naturally suppose that but a partial oxidation takes place; and, that these partially oxidized atoms are carried along the veins towards the heart, and afterwards to the lungs, where they are completely oxidised, and thrown off in the form of carbonic acid gas. This is confirmed by the symptoms of a common cold. The pores of the skin get closed. The patient feels a shivering all over his body. The lungs get surcharged with a mucous matter. The whole system suffers and is affected. No wonder: the closing of the pores of the skin, and the prevention of the necessary supply of oxygen to the body, thereby produce all these effects very simply. The carbon, which ought to have been partially oxydized, in this manner is left intact, and is thus carried to the lungs. Consequently, but little heat is produced on the surface of the body. But what can the poor overtasked lungs do with it? They try hard, and sometimes work so severely, when such colds are of long standing, as to injure themselves permanently; but all that they can do is but to produce partial relief. To oxidize completely, and at once, the blood which should have been half oxidized before, they make more respirations, and throw off, by spasmodic efforts, those collections of mucous matter so rich in carbon, which, it is impossible for them to prevent from forming. The kidneys too work hard to relieve nature under her difficulty, and hence the alteration produced in their secretions, by the additional duties they endeavor to discharge.

The "chyle," or fluid absorbed from the blood, contains that portion of the food which goes to support nutrition and heat; and it is specially, though not altogether, as we shall soon see, with that portion of animal physiology that we have to do. How far it undergoes a partial change, from its first contact with air in the lungs, it is not for me to say, although, from the nature of its metallic and alkaline constituents, we are led to presume that it is one reason of the change of color in the blood. But this we know, that, gradually, it becomes not only fitted to serve as an element in the nutrition of animals, but that the carbonaceous part of it is more immediately adapted for the production of heat, and also the deposition of fat, where there is a sufficient quantity to supply both purposes. Now this is the very point we want to arrive at. In stall-feeding animals, we generally select those that are full-grown, where our principal object is to make them acquire a large quantity of fat, in a short time, rather than to furnish food to supply additional muscle. What we have got to do, therefore is to select food rich in carbon, where Nature has already performed half the task of assimilation, and try to put the animals under such modified circumstances, as will enable them to get fat the most advantageously to the owner, that is, to lay on the greatest quantity of fat possible, in the shortest time, and with the least expenditure of food.

Having selected the stock we wish to stall-feed, the first inquiry which meets us is how to accommodate them while they are being fed. As I am not now about to describe such buildings as are most suited for the accommodation of live stock, in all the several conditions, in which the farmer may have occasion to keep them, I shall content myself with a few brief observations. In the first place, I would recommend that they be placed in a house where the temperature can be regulated, and the light excluded as well otherwise the cattle will require a larger quantity of food, and take longer time in being perfectly fattened; in the next, that the place where they are to be well ventilated; and lastly, that they be regularly fed, and kept clean, and well provided with litter.

The reasons of these observations are obvious. If, as I have stated above, and shall show more fully as I proceed, fat and animal heat are nearly produced at carbon it follows that a large quantity of carbonaceous food will produce a given quantity of fat, at a moderate, than at a low temperature, which may be accounted for thus: The carbonaceous portion of the food, or a large portion of it, is separated by the absorbents into chyle, and carried along and mingled with the blood, as we have seen, and afterwards through the arteries to the capillaries, where it undergoes a change. Now, if there is a sufficient quantity of oxygen furnished to oxidize, but partially—say to convert into oxide of carbon—the whole of this carbon already, let us suppose, in a fatty state, then of course no fat is formed, but, if it cannot consume but a portion of it, then it is natural to conclude that this greasy material as it rubs along, leaves a portion of itself, which, from gradual accumulation, becomes a layer of fat. This we know to be a fact. But we also know, that the colder the temperature, the greater the quantity of oxygen inhaled by the lungs or absorved by the skin, owing to the greater density of the atmosphere; and consequently, the greater the quantity of fatty matter consumed, which would otherwise be partly left in the system. This is a wise and necessary provision of Nature, in providing for the comfort of animals; but the prudent farmer looks for a cheaper substitute, to supply the place of a fuel which costs so much, and which, being already in the animal, can be used to so much better account.

But it is not heat alone which modifies the requisite quantity of food, or helps in the acquisition of fat. Morton—as quoted by Johston—not only found, "that the most profitable return of mutton, from the food consumed, is when the animal is kept under cover, and in the *dark*," but that the quantity of turnips eaten was not one half, while the increase of weight was greater. This is only what we might have expected, as, in many cases, bodies, which in obscurity remain totally without action on one another, are brought into combination by exposure to light; the rapidity of their reaction being proportional to the brilliancy of the light; and carbonic oxide—in contact with chlorine an element of the blood—is one of those on which light has such an operation. So, that not only is the fattening of animals promoted by their being shut up, out of sight of any objects which might excite or disturb them, but the chemical operation of the rays of light is thereby prevented from assisting in the decomposition of the greasy particles of their food, which have been brought, by the little vessicles of the arteries, to the neighborhood of the skin; and a greater quantity of them are thus left to minister to the desired purpose.

In my next, I shall endeavor to show the suitableness of Potatoes for Stall-feeding as containing a food very rich in carbon, and easily convertible into animal fat.

AGRICOLA.

What Food will Produce the most Wool.

As the raising of sheep is fast gaining favor in this State, and as it is certainly destined to be a sheep raising and wool growing State, and that too on a large scale, we feel that every practical truth connected with this subject is of much importance, and copy the annexed account from Morrell's Shepherd. The experiments can be easily tested here in California, at the present time, and thus prepare the way for a more speedy success, if they are based on truth and will be applicable to our State:

Peas, beans, vetches, &c, are useful for the purpose of enriching the blood, by furnishing it with large supplies of albumen, which is its principal constituent. It will be remembered that in the analysis of flesh and blood, the nearly identical proportions of their constituents are nearly identical; consequently, whatever food contains nitrogen and the greatest amount of albumen, is the best adapted to the development of flesh or muscle, and is therefore the most nutritious. Wheat, rye, barley, and buckwheat, contain large quantities of albumen, especially the first two; while oats, it will have been seen, contains but a little per cent. of its organic elements in albumen and peas and beans no less than twenty-one per cent. What conclusion, then, to arrive at from this? The chemical composition of horn, hoofs, hair, and even feathers, is nearly the same, and gelatin, and their inorganic, viz. ca-

and phosphate of lime, and the oxides of iron and manganese. Hence it will readily appear that food given to the sheep which will supply the greatest proportion of albumen, in the same ratio will increase the wool secretions, and, consequently, be productive of the most wool, provided, however, they also hold in suitable combination the inorganic substances of wool, without which they assimilate mostly for the formation of flesh or fat. This may be exemplified thus: a soil may be highly productive of corn, as well as a few of the cereal grains, yet for the production of wheat it may lack the proper proportion of the phosphate and carbonate of lime, and consequently, the berry will not only be deficient in quantity but also in quality.

The following table exhibits the results of the experiments of the distinguished agriculturist, De Raumer, on the effects produced by an equal quantity of several substances in increasing the flesh, tallow, and wool of sheep:

	Increased weight of living animals.	Lbs. wool produced.	Lbs. tallow produced.
1,000 lbs. potatoes, raw, with salt,	46½	6½	12½
do " do without do	44	6½	11½
do " mangel wurtzel, raw,	38½	5¼	6½
do " wheat,	155	14	59½
do " oats,	146	10	42½
do " barley,	136	11½	60
do " peas,	134	14½	41
do " rye, with salt,	134	14	35
do " rye, without salt,	90	12½	43
do " meal, wet,	129	13½	17½
do " buckwheat,	120	10	33

The results are said to agree with those of De Dombale, and with those of a number of other agriculturists.

It will be perceived by the above table, that wheat produces the greatest increase in the flesh of the sheep, though but little greater than oats; that peas, wheat, and rye, produce the greatest increase of wool; and that barley and wheat cause the greatest increase of tallow. That, as an average, grain generally gives about three times the increase in the flesh, that roots do when in equal weight; that grain produces about twice as much wool as is caused by an equal weight of roots, and several times the amount of tallow.

The legitimate conclusion from the foregoing is, that the flock-master, whose object is wool only, must rely on good hay and some straw, whose constituents are admirably adapted for the growth and perfection of wool, with a moderate allowance daily, of ground peas and oats, and some potatoes as green food, for the greatest amount of wool; and those gross substances oil-cake, corn-meal, rota bagas, may be turned over to the producers of fat mutton. This will presently be adverted to again.

A Grasshopper Remedy.

MESSRS. EDITORS: I have just noticed an article in that truly useful and well conducted journal, the Scientific American, which all owners of fruit trees and vines would do well to try now before the grasshopper season is over, to prevent them from devouring the leaves.

"I bored proportionably small holes, according to the size of the trees, through the sap wood, six or eight in number, at different heights around the trunk, though at a short distance from the ground. The holes were then packed two-thirds full of sulphur and plugged up with soft pine or cedar wood coated over with a mixture of pitch and beeswax. I could not doubt for a moment that sulphur exhalations were obnoxious to tree worms, since from observations I know it to be the case with the red ant and some kind of winged insects, while I think the view just set forth is well confirmed by the gradual disappearance of the worm shortly after the application of sulphur. Sulphur is exhaled from the leaves just as it is from the human body after being taken internally and absorbed by the system, which absorption is certain in case of the tree for upon the following Spring I found no sulphur but a little gummy matter though the hole had nearly closed up. Silver coin carried in the pockets of individuals taking sulphur, soon becomes blackened with a coating of sulphuret of silver, and there remains every reason to suppose that sulphur in some form, could be detected upon the leaves of the trees treated in the manner alluded to.

Reading, Pa., June 2, 1855. JOHN H. RAHON.

The foregoing is very well worthy a trial, and presents us with something which our readers would do well to take heed. That is the way, in this manner [illegible] to treat [illegible] the animals and [illegible] to [illegible] for a number of years, but [illegible] —*Ed. Scientific American.*

I have only to add, that I have [illegible] to that valuable journal, [illegible] and [illegible] [illegible] [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, AUGUST 3, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

☞ MANUFACTURERS of every branch, Nurserymen, Seedsmen, Florists, Book-sellers and Publishers, and every branch of business connected with California interests, should advertise in the CALIFORNIA FARMER, if they wish to have their business known over the country.

STATE FAIR.

KEEP IT BEFORE THE WHOLE PEOPLE THAT THE GREAT INDUSTRIAL EXHIBITION, EMBRACING AGRICULTURAL PRODUCTS OF THE WHOLE STATE MANUFACTURES, MECHANICAL WORKS AND WORKS OF ART AND TASTE, THE EXHIBITION OF STOCK, THE FESTIVAL TOURNAMENT, WILL COMMENCE ON THE 25TH SEPTEMBER NEXT.

The Hall will open the 25th, in the city.

The Cattle Show and Festival Entertainments will be held at the Louisiana Race Course.

Great preparatinns will be made to have a splendid Exhibition of Blood Stock, as well as of the best Native.

During the week, it is expected great trials of speed will be made of the finest coursers in the country.

In order that the best results may be attained, *give this an extensive circulation.*

A Call

To every organized County Agricultural Society.

I AM instructed by the Executive Committee of the State Agricultural Society, to ask the earnest co-operation of every County organization, and to ask of the Corresponding Secretary of each such information of their several Societies as will make known to the Executive how much their Counties will do to further the interests of the Exhibition—what products, what stock and what manufactures may be expected from their several counties; and to solicit an active co operation in this great work. It is also very desirable that special delegations should be appointed to attend the Fair and to act in convention, and thus aid in promoting and advancing all the great and important interests involved.

The Secretaries or other officers of each County are particularly desired to reply to the call at the earliest moment.

Per order of Executive Committee.

JAMES L. L. F. WARREN.
Corres. Sec. State Agricultural Society.

Agricultural Visiting Committee.

WE take pleasure in calling the attention of our readers to the appointment of a Special Committee to examine those Farms, Gardens, Nurseries, Orchards, Greenhouses, &c., that have been or may be entered for the premiums of the State Society. The Committee is composed of gentlemen well qualified for their duty, and we trust they will unite promptly, examine minutely, and report in detail. Their reports should embrace important data. Their duties are as urgent as they are important and valuable to the State, and we trust there will be no delay in the performance of these duties—neither have them done hastily.

We refer the reader to the doings of the Executive meeting, held last week at the Society's Rooms:

At a meeting of the Executive Committee of the State Agricultural Society, held this day, Gen. C. I. Hutchinson of Sacramento, Rev. A. H. Myers of Alameda, Hon. Sherman Day of Santa Clara, Hon. W. W. Stow of Santa Cruz, and Gen. Allen of Yuba, were elected a Committee for the examination of Farms, Orchards, Vineyards, Nurseries, &c., which may be entered for premiums at the ensuing Fair. Although the time for such entry has expired, yet the Committee is instructed to receive propositions for such entry until the 15th August, being *bound*, of course, to visit only those which may be within their range. Special pains, however, will be taken to answer all special requests. O. C. WHEELER, R. Sec.
State Agricultural Society's Rooms, July 27, 1855.

EARLY STOCK.—On our route up-river we called on farmer Simpson, one of the solid men of Yuba county—owner of a good farm and the ferry under his name, fine stacks of grain and hay, &c. From Mr. Simpson we learned that he had a fine heifer on his farm that had given him a calf—and the heifer was *less than a year old*, herself young to be a cow!

The New County Society of Yuba.

WE can most sincerely congratulate this county, and its people of every class, in the successful organization of their County Agricultural Society. As will be seen by their reports, we were present at their preliminary meetings, and the real interest then manifested assured us there is abundant material for a most prosperous Society.

We know it is very difficult in a new country like this, amid so many distractive cases and difficulties as at present surround all interested, to call together all those who will finally become identified with this Society. At the present time there is quite a degree of political excitement; a depression too from losses caused by the grasshopper—much, very much to deter men from immediate action upon a subject so new as an organization of this kind. Yet we were truly pleased to see the meeting so well, we may say so largely attended, when we think of their conflicting interests.

We are sure, from our personal knowledge of the gentlemen elected to office, and from those who have so promptly enrolled their names as members, that this Society will become a very efficient one. We also know they have a soil within their borders as a county, and men that know how to till it, of such a character that we may look forward to glorious results in the future. The people in this county have evinced great interest in the coming State Fair, and will do their utmost to excel in whatever they send. We have the assurance of a handsome delegation from Yuba and Sutter counties, who are to contribute much to this great work.

We are very grateful for what we have experienced of a personal character, and the increase of our list of subscribers, and shall labor hard to deserve them all. We wish the Society and our friends all a most abundant success.

OUR FARMER.—To all our kind friends who have given us their names as readers of our journal in the counties we have just visited, we tender our sincere thanks. We will try and make the paper that shall find a welcome in every family in our land. To the Press of Marysville, for their generosity and kindness towards our journal, we are most grateful, and while we still invoke those who yet "know us not," read us not, we say, try us; we desire your countenance and support, not simply for the pecuniary reward it brings, or that we may be more widely known, but because we shall constantly strive to present the Industry of the Country, the resources of our State, and these truths we wish widely known. These facts, if widely disseminated, will build up our State, will bring us an immigration of the right character, and thus bless us all with a general prosperity. We wish too, that those who desire to induce an immigration, would *send the Farmer to their friends in the States.* We know it is the truest exponent of California resources that can be sent home, and one that will tell for good.

Entrees for Premiums.

STATE AGRICULTURAL SOCIETY'S ROOMS,
Sacramento, July 27, 1855.

EDITORS FARMER: By letters received I am authorized to announce that J. C. Davis, Esq., of Putah, offers his Grain and Stock Farm for the inspection of the Committee, with a view to receiving the first premium at the ensuing Fair of our Society. O. C. WHEELER, Rec. Sec.

MISSION OF SAN JOSE, July 20, 1855.

C. I. HUTCHINSON, President of Cal. State Agricultural Society:

The undersigned offer their Orchard and Nursery at the Mission of San Jose, for the first premium. Respectfully yours,
BEARD and LEWELLING.

AMERICAN RIVER, July 10, 1855.

President State Agricultural Society:

SIR: I offer my Orchard, Nursery, Vegetable and Flower Garden, Hedge and Vineyard for the examination of your Committee and competition for a premium. A. P. SMITH.

MARYSVILLE, July 24, 1855.

To the Secretary of State Agricultural Society:

WE desire to enter for the State premium on best field of Broom Corn, and should be glad to receive a visit from the Committee of Examination when it may suit their pleasure.

Respectfully, CHASE & TAYLOR.

YUBA, SUTTER AND BUTTE COUNTIES.—We announce these counties as co-workers in the great enterprise of the State Fair. Very fine stock from many ranches will be brought to the Course, and we are happy to say members will be enrolled upon the Society's records as active laborers. These counties can do much, and we believe they will.

FINE peaches are selling for one bit each, in this city.

Feather River Road—Ranches, Grasshoppers, Titles, etc.

STARTING from Marysville we passed up the Feather River Road, examining the several Ranches, their crops of grain, vegetables, &c. We were continually pained to witness the devastation of the grasshopper, but pleased to see the general fortitude displayed under the loss this *peste* has caused. Great as this evil is, it is nothing compared to the loss and hindrance to the general prosperity caused by the delay in the settlement of titles. We passed many fine Ranches, and noted their improvements. We called at the

"COVILLANO FEATHER RIVER RANCH."—We found here a fine tract of land, with a neat residence upon the highlands, a broad and beautiful opening to the river some miles from the house, and as rich bottom land as could be desired. Upon this land and in fact upon the whole of this fine bottom, we have no doubt ere long we shall see tropical fruits as well as cotton, rice, tobacco, and in the lower bottoms sugar cane will thrive. C. Covilland, Esq., the owner of this and several other fine ranches, we found ready to treat liberally with those who have settled upon his land, and we trust every disposition of this kind will be met with a corresponding liberality on the part of settlers.

We next called at the

CORNELL RANCH—And here we saw many things to please us—a family comfortably and happily situated, ready to make important improvements, but delayed by reason of "no permanent title." Kindly entertained, we passed on, examining and calling at many places, until we came to the

PEGRAM & WILKINS RANCH.—It were impossible to view this lovely spot without some feelings of envy, almost—situated as it is upon the high ground—a beautiful residence (cottage style) with outbuildings, and a fine space in front planted with peach trees which we regretted to see needed a more scientific culture—(we really wanted to off coat and dig round them and improve them)—we learn they will receive more care this fall. The magnificent oaks around the cottage gave it a beautiful appearance. In front of the cottage, upon the "river bottom," lay outstretched like a park, a prairie a mile wide by one and a-half long. This reached to the slough next the river, the banks of the river being lined by groves of oaks. Over and high above rise the towering Buttes, like black clouds piled up against the very heavens. This fine bottom land of many hundred acres can be made the most fertile and productive garden in the world.

We were most kindly regaled with a refreshing supper of luxuries from the Ranch—"home produce"—chickens, eggs, milk, melons, &c.; and to Dr. Pegram and Mr. and Mrs. Wilkins, we are much indebted for a joyous refreshing. Then we rode on.

Evening drew on as we rode along the bank of the Feather. We could not help looking forward with hope, and in imagination seeing this rich and fertile soil magnificently studded with happy homes and beautiful gardens, and the Farmer "sitting under his own vine and fig tree, with none to molest or make him afraid." We rode on and stopped at the "Horn Cut Hotel," to water our horse, and there learned of a festive scene a few miles beyond—some joyous gathering, some "Harvest Home," Husking, or merry time, &c. So, rurally impressed, we could not fail to be there.

After a few miles we drew up to a fine mansion and alighted. There seemed a merry spirit all around. A spacious pavilion, brightly illuminated stood 'neath the tall oaks, and by the light we saw it was gaily decked and festooned within. After a refreshing bath, &c., we were tempted to take a peep into this fairy temple; and reader if you had been there, you would have been as pleased as our humble self. You know all are sometimes mysteriously led, we know not how; but in this instance we were drawn as by some gentle cord from some powerful "Derrick," and thus induced to draw "Nye" unto this scene, intended for a joyous festivity among happy friends with happy hearts. We had remained but a brief time when the sound of music echoed through the temple; we turned, and there before us stood a merry group, youthful, gay, joyous, beautiful; anon, like spirits they were moving gaily before us. We know not *exactly* how we are constituted, or how much electricity there be in us, but we felt a *moving of our feet*, and on looking down we saw that—

Think as we would, whate'er our will,
We had no power to *keep our shoes still,*

and imperceptibly our *shoes* were drawn on by electric influence into a certain line or place, and then made to keep time to the music of the—not spheres, but the dance. Yes, reader, we could not help it. Had we not been so much a stranger, we would record all we saw; but the little time we were there we could not but notice the lady-like appearance of Mrs. D., and Miss V., and Mrs. S., and the sweet and joyous faces of the little fairies that glided among the throng. As to the other sex, though they were gentlemen all, yet when compared to the fairer sex, they were as widely different as are the "Brewster" rocks we New Englanders go to see when we ride down across Barnstable Beach to view the mermaids, those fairies of the deep, that the Lord made to give man a conception of beauty. But reader, the movement and exercise of our shoes gave a new life to the soul, and from this scene we passed to the world without, and "came home."

The festive scene of which we have spoken was at the "Central Hotel," about 18 miles above Marysville, and about half way to Bidwell's. We would with pleasure call the attention of those who may be called this way, to this house, as deserving their patronage. Mr. Derrick, the present proprietor, had been at great pains and cost to prepare a *Festive Scene*, but by some mistake it was not as well attended as it should have been. Everything had been prepared in first rate order—an extra supper, fine music, splendid rooms—but a lack of attendance. We hope another time Mr. Derrick will be better rewarded. We suggest to him and to all others, a "Harvest Home" Ball, and let the room be decorated with sheaves of grain and other products of the earth; then bring in the farmer and his wife, and his children, and be merry and happy together. This will tend to the happiness of all.

To our friend Beach we have been again indebted for much information and for an introduction to the cultivators of the county—for many favors that *words* will but poorly repay.

Land Titles—Their Settlement.

HERE is a question of the greatest moment, and one of vital importance to the whole State. While the present state of things lasts and titles are unsettled we had not ought to expect an increased immigration. Families will not come unless they can be insured a permanent home; and all land owners should join to accomplish so desirable an end. We believe the first thing to be done is to "bring those who differ together." Good men can do this. Politicians never can.

"Blessed are the peacemakers;" and if some of our citizens, not identified with partizan warfare, will only strive to unite men, a blessing will fall upon them and their families.

Go to thy brother and say "come let us reason together." We know that this evil can be remedied in *no other way.* We have conversed with many land holders and settlers, and they all wish to settle this matter amicably—only a very few are headstrong. The only thing that prevents this is those go-betweens that are continually fermenting discord among men, and keeping them apart by the intricacies of the law. By and by the day of reckoning will come, and an infamy justly due will rest upon those men who have so long labored to fatten upon the spoils of the laboring classes, by keeping them in the meshes of the law.

We have met Messrs. Covilland, Simpson, Gen. Sutter and others, and they with one voice are ready and willing to act honorably and even generously by the settlers. But there are those who continually hoodwink and deceive, and thus stay progress in this matter and keep back improvements that would be worth millions of dollars to our State and years of peace, happiness and prosperity to our people.

Let every good man, of every party, aid in the friendly settlement of this question and they will be sure of a glorious reward.

FAVORS RECEIVED.—We acknowledge with many thanks the reception of a large parcel from G. W. Murray & Co., Montgomery Block, San Francisco: comprising a select collection of magazines, periodicals, foreign and domestic papers and pictorials.

From our correspondents in the East, valuable books—acknowledged in another column.

From Arthur F. Page, Esq., package of the Northern Farmer—very acceptable.

From Wells, Fargo & Co., and the Pacific Express Co., many favors in exchanges, letters and parcels to forward the enterprise in which we are engaged. To Wells, Fargo & Co., we have been particularly indebted while at Marysville for prompt aid in transmission of matter to and from our office.

To the gentlemanly directors, agents and assistants of the California Stage Company we have been under many obligations in our travels.

Formation of an Agricultural Society for the Counties of Yuba and Sutter.

A MEETING pursuant to adjournment, met at the City Hall, Marysville, on Monday evening, 30th inst., at half-past seven o'clock to hear the report of the committee appointed to draft a Constitution and By-Laws for the Society, and for other business.

Gen. Jas. Allen, Chairman, called the meeting to order.

The committee, through their chairman, Dr. E. Teegarden, reported a constitution and by-Laws, which were read by the secretary. On motion, the same was received and adopted, and the committee discharged.

On motion of G. H. Beach the books for membership were opened, when, almost with exception, every person present signed the constitution.

On motion, the Chairman appointed a Nominating Committee, who, after a short consultation, reported the following names for permanent officers:

President—J. S. Kirkpatrick.
Vice-President—Geo. G. Briggs.
Recording Secretary—G. H. Beach.
Corresponding Secretary—H. W. Haskell.
Treasurer—C. H. Hedges.
Board of Directors—Dr. E. Teegarden, W. H. Dram, R. N. Turner, I. C. Sargent, Jno. Brophy, J. Blanchard, A. L. Gay, J. B. Hurlburt, S. R. Chandler Robert McQueen.

On motion, the nominations were unanimously confirmed and the committee discharged

In the absence of the committee, John Brophy, Esq., offered the following resolution which was unanimously carried:

Resolved, That having full and perfect confidence in the integrity and ability of Col. Warren, editor of the CALIFORNIA FARMER, we pledge ourselves to use every reasonable influence to promote and extend the interest and circulation of his paper, so long as he lives and continues his devotion to it, and remains, as he now is, its ornament.

Whereupon Col. Warren, being present, rose and responded in some elegant and appropriate remarks, and only ceased to charm the audience when the return of the Nominating Committee reminded him, by their presence, of business before the meeting.

On motion, Colonel Warren was unanimously voted an honorary member of this Society.

In the course of the evening, a letter was received from Gen. Sutter, saying he was unable to be with us on this occasion, but wished to be considered heart and hand with us, and would endeavor to be present at the next meeting.

It was moved and carried that this Society be constituted a committee of the whole to obtain members.

Here Col. Warren rose and informed the meeting that by an act of the State Society the Presidents of all County Societies became Vice-Presidents of that body.

G. N. Sweezy, Esq., moved that when we adjourn, it be to meet again in this city at the same place, on the second Monday in August, 12th inst., at half-past seven o'clock, for the purpose of appointing the various committees and choosing delegates to the State Convention, to be holden at the city of Sacramento in September.

Col. Warren and G. N. Sweezy were successively called upon, and each in their turn made their subject very interesting, and only those present can know the loss of the absent.

On motion, the editors of the California Express, and Marysville Herald, and CALIFORNIA FARMER, were requested to publish the proceedings of this meeting.

It was moved that the Secretary, in behalf of this Society, tender thanks to the editors of the Marysville Press, as also of the CALIFORNIA FARMER, for their zeal and aid in perfecting the organization of this Society.

There being no further business before the Society, on motion, the meeting adjourned

G. H. BEACH, Rec. Sec'y.

BROOM CORN—BROOMS.—Since visiting the county of Yuba and examining the fields of broom corn there, we find our own county has a field of broom corn of about *thirty acres*, belonging to Lusk & Co. This field is back on the American bottom, about three miles and a half from this city. The hight varies from six to fifteen feet. It is well headed, the brush is very long and straight, and the prospect of a good return very flattering. Messrs. Lusk & Co. have received by the last steamer their machinery for the cleaning and making of their brooms, and they expect to have their work in market in about ten or fifteen days. Lusk & Co. expect to manufacture fifteen to eighteen hundred dozen brooms of the best quality. They will be competitors for the premiums of the State Society. We rejoice to see this, to know of the progress of Home Manufactures. This builds up our State.

THE STATE FAIR.—We feel called upon to urge upon all who wish well to our State—merchants, miners, manufacturers, mechanics, laborers—all, equally with the agriculturist—and also every artist and professional man, to give their minds to this subject, and see what they can do to promote the coming Fair. They should not only take part in it, and be present, but should have their families, their children present that these all may become interested and identified with all that adds to the wealth and prosperity of our State.

New Books.

CONE CUT COVERS: The experience of a Conservative Family in Fanatical times. By Benauley. Mason Brothers, Publishers, 23 Park Row, New York. 456 pp 12mo.

This is a singularly witty, satirical, and well written American romance, depicting lifelike (and we suspect truthful) eccentricities of rural New England Society, which will be particularly interesting to every son and daughter of the land of steady habits who will not fail to recognize the accuracy of the portrait these exhibit, and indulge in hearty laughter at the fun interspersed throughout the book. Those, too, who have figured in, or are acquainted with fashionable society in New York, will be surprised to find skillfully drawn scenes of folly of the Gotham "upper ten" circles, which while they do not offend correct taste, will have a reformatory tendency upon all interested, and provoke only cheerful mirth in the reader. True the morbidly sensitive may, perhaps, feel somewhat wounded, but as the book inculcates an excellent moral, and seems to have been written for good, we can overlook the personalities, although they might have been better omitted.

Mr. R. S. Bagglehale, of 317 Broadway, New York, we perceive by the New York journals, has intimated an intention to prosecute the author and publishers for libel, in showing up the secrets of his fine *pure* imported wines and brandies out of genuine domestic materials. We suspect, however, that if he is the shrewd business man we take him to be, that he will not aid in making the book more popular than it will be on its own merits. A libel suit would be certain to do this—but the Cone Cut Covers will find its way into every circle that has an appreciation of keen wit and satire. It will rank high as a literary effort, and being the first production of Benauley, we may hope for still further works from the gifted pen of the same writer.

RUTH HALL: A Domestic Tale of the Present Time. By Fanny Fern. Mason Brothers, New York.

This book, although published in the early part of last winter still commands a large sale, and is regarded by the Book Trade of the East as the "most successful American romance." The book has intrinsic merits, and is hailed with joy by many oppressed widows and other friendless women, who felt a thrill of exultant satisfaction at the success of a Ruth Hall in elevating herself from positive indigence to prosperity and wealth. There are those who say that the story of Ruth Hall is a veritable biography of Fanny Fern, but we have no evidence of its truth. The book, however, is one that we like. We like the womanly heroism of Ruth as a mother, for the *courage* to retaliate upon her relatives, who treated her with marked unkindness and neglect, simply because she was their relatives and *poor*. It is a lesson well taught, and one which the wealthy will do well to study.

THE LIFE OF HORACE GREELEY. By James Parton. Mason Brothers, New York.

Who has not heard of Horace Greeley, Editor of the New York Tribune? Who has not desired to know more of the man than he now knows of him? To all, then, who either do know, or want to know the gifted and eccentric head of the New York Tribune establishment, we would say procure his "Life" by Parton. It is as entertaining as a romance, showing the career of a laborious, energetic, and indefatigable New England youth to eminence and distinction, without any of the adventitious aids of Society. Every school boy should have the book, and emulate the example of young Horace in his obedience to parental authority, his attention to the instructions of his teachers, and in his kind and cheerful good will to his school mates.

Mr Parton, unlike most biographers, gives us a correct view of all sides of his hero, proving conclusively that Greeley could have had nothing to do with getting up the book—for there are some things in it we think he would have preferred having omitted. But nothing could have been omitted without spoiling the "Life"—now exhibited as he is.

It is a work that will rank with the Life of Franklin, in teaching youth lessons of self-denial, industry, economy, &c., and one we can confidently recommend to the parents of California, that may safely be put into the hands of their sons.

Notices—July 5.

JUST published by Edward Livermore, New York, a new work on the Eastern War, finely illustrated, called Europe and the Allies of the Past and to-day—by an officer in the British Army, who served under Wellington—with a complete history of the origin and progress of the present *Struggle in the East*—with biographical sketches of the prominent heroes now figuring at the Crimea. In these days, when so much trash is sold, works of real merit should command attention, and we can recommend this work as not only beautifully printed but carefully written, and must command a large sale.

DOESTICKS—A new work just published. This book will soon be found in every house, judging from the author's name and fame.

THE Star Papers just published by Derby, New York, we feel inclined to call attention to again, as there is a freshness and geniality about them that we like. And the inspiration that breathes in them, cannot fail to reach the heart and do good, wherever read.

JAMES FRENCH & Co., Boston, have just published a very neat and attractive volume, called the "*Sure Anchor*," or the Young Christian admonished, exhorted and encouraged, by Rev. H. P. Andrews. The book will doubtless have an extensive sale, as it is very well written, and admirably adapted to the purpose the author had in mind when the book was produced. It is written in an easy and flowing style, is well calculated for presents to the young, and copies should be placed in all our Sunday and Public Libraries.

PETRIFACTION.—We have received from Mr. L. J. Keach, of this place, the finest specimen of petrifaction we have ever had the pleasure of examining. It is a small piece of the limb of a tree, somewhat resembling the laurel, about nine inches long, quite smurley, and jagged, where the smaller limbs or twigs were broken off. It is an half inch in diameter at the butt, and shows all the natural indentations of the wood with the bark off. We intend sending this curiosity to Col. Warren of the CALIFORNIA FARMER, to be deposited in his magnificent museum.

Sometime in May last we saw the above article in the Puget Sound Courier, together a kind notice of our journal. Last week we received a parcel from W. B Affleck, Esq., one of the editors of the Courier, (by the hand of Capt. Diggs,) with the petrifaction named, and it is indeed beautiful. It is like a piece of cornelian, so perfectly is it petrified We are indeed grateful, and those who desire to see it can call at the Society's Room's on Fourth street, Sacramento, where they will be gratified.

AGRICULTURAL IMPLEMENTS.—We would particularly call the attention of our readers to the various agricultural establishments in California, and also those in the Eastern States. It is important that every implement used upon the farm and garden should be of the highest character; none others should ever be used; the best are the cheapest, and this is true of all grains and seeds, trees and plants. We hope to see the day when California will be exporter of the best of each; but so long as we must import, we take pleasure in presenting the best house to whom we can refer our readers. Among those at New York to whom we can refer such as desire to import, we take pleasure in naming the House of R. L. Allen & Co. 189 and 191 Water street. This is an old and well established house, and its plows and implements can be found in every county in California; and its various grains and seeds are growing in all the soils of our fertile country. The new and valuable merchandise of this house will constantly be advertised in our columns.

EXHIBITION OF STOCK—*Louisiana Race Course.*—It is now settled that the Exhibition of Stock, Races, Festival Games, &c., will be held at the Louisiana Race Course, which has been tendered *free* to the Society by C. M. Ellis, Esq the well known head of the turf. To Mr. Ellis the Society is indebted for the track, and we feel assured that Mr. E. will do all in his power to promote the interest of the Exhibition. Independent of this we learn that Mr. Ellis has with his usual liberality, proposed *two purses of five hundred dollars each*, which will be announced in the sports hereafter. For all acts of like liberality, we hope a reward will be given.

WHAT A COUNTRY!—Dr. Brown, of this city yesterday left at the Agricultural Society's Rooms several very fine peaches, some of them grown on trees but *fourteen months old* from the pit, and the balance on trees from sixteen to thirty months old. We shall give the varieties, etc., hereafter.

MERINO SHEEP.—Dr Chandler, of Yuba City, has just introduced into Sutter County a pair of Merino Sheep of pure breed. The owner has done this at great cost; and for the valuable service he deserves the thanks of the county.

GREAT RACE.—An exciting race is to come off on Saturday next at the Course at Green Hall, Marysville, between two fast horses, to harness. The stakes will be *two hundred and fifty dollars* of American coin, at which [illegible]

THE WESTERN HOTEL (MURRAYS) AND THE MERCHANTS' HOTEL, OF MARYSVILLE.—There are several good and substantial hotels at this city, each appropriately located and devoted to some calling as in other cities, or known by some local name or association. We had only time to take a cursory glance, and only visited two.

The Merchants' is a large and splendid Hotel, built by one of Marysville's most wealthy and enterprising merchants, J. C. Fall, Esq. This Hotel is well conducted, and well sustained and liberally patronized as a mercantile and fashionable House. The proprietors are Churchill & Stephenson.

The Western Hotel (Murrays), the stage house, of the California Stage Company, is an immense structure and contains about *one hundred rooms*. Here the great masses of the People gather. We noticed the books give fifty, sixty, and more arriving every day. Here you meet everybody. The Stage Company give a world of life and business, and this line are doing a grand business; they deserve it, for they are doing all in their power to meet the wants of the community. Mr. Murray, the proprietor of the Western, is one of the working men of the age. He established the Western more than two years ago, then a wooden Hotel. The fire of May, '52, swept it away. The The proprietor, nothing discouraged, although heavily losing, recommenced, and soon erected the present spacious Hotel, and which has since been well sustained. Mr. Murray's House is in excellent order, with fine and well furnished rooms, good waiters, excellent table, and clean linen. Here order prevails, for Mr. M. is ever on his post and ready to plan and labor for the comfort of his guests. He deserves, and we feel assured he will ever receive a generous support.

MEMBERS TO THE STATE SOCIETY.—One of the plans to promote the usefulness of the State Society, is to aid them by the value of membership, and this is one of the sure ways to prove your interest and your wish for its success. Gentlemen who desire to give this evidence of their wishes, can call at the Rooms of the Society on Fourth street, between J and K, or address us, enclosing $10 by mail. This amount entitles them to all the privileges of a member, and they and their immediate families to an admittance to the Society's Exhibitions. We hope many will come forward, voluntarily, and enroll themselves.

NEWS OF THE WEEK.—In this city the principal topic is Mr. Mesick recording his deed for about half the city, purchased of "John A. Sutter, Jr., of Acapulco," for the consideration of some fifty-odd thousand dollars. There are thought to be serious obstacles to Mr. Mesick's obtaining possession.—In San Francisco, the Chronicle accused a reporter named Pollard of meanness, when it is said Pollard, supported by a big cane and his friend Walton, visited the editorial room, and the said cane hit Mr. Nisbet, one of the editors over the head; but Pollard having acquired a black eye, was "hustled" out, with his friend, by a compositor; and Walton got kicked on the street by Mr. Soule, the chief editor, which gives the Police court a job.

IMPORTING VEGETABLES.—It is not a great many years since Connecticut used to supply the West India islands with onions and other kinds of vegetables; but now the tide has turned, and a stream of vegetables is pouring in upon us from the West Indies, and all other parts of the world. We are certainly getting to be great eaters. With the finest soil and the best climate in the world for all kinds of vegetable productions, we are importing from foreign countries the articles that ought to be produced in our own gardens. Bermuda supplies us with early potatoes and tomatoes; and it seems that the British Provinces at the East of us are supplying us with eggs, which are now imported duty free under the Reciprocity Treaty. Twelve hundred and sixty dozen of Nova Scotia eggs were entered at the Custom House in Boston, on one day this week. We import enormous quantities of dried prunes from France, a kind of fruit that grows abundantly in all of our Eastern and Middle States; we import figs from Smyrna, which might as well be grown in North Carolina; grapes from Spain which can be raised in Virginia; nuts from Madeira which may be raised in New York; and [illegible] which might be produced in a climate as near by as the Southern States. As for eggs the value of which is so much greater when they can be warranted fresh, we should hardly think that it would be profitable to import them from abroad. Peaches we are able to raise as great quantities as we can consume; but we did not expect that we should hear of a cargo of them delivered from [illegible] from the neighboring country. Potatoes are brought to us from France, Germany, the British Islands, and a cargo of Irish potatoes was [illegible] Times.

AGRICULTURAL AND HORTICULTURAL FAIR;

Cattle Show and Industrial Exhibition,

OF THE

CALIFORNIA

State Agricultural Society,

TO BE HOLDEN AT

Sacramento City, in September Next.

PREMIUMS OFFERED FOR 1855.

The following section from the Act of Incorporation, by the Legislature, is the basis for the premiums announced below:

"Sec. 8. There is hereby appropriated from any money in the Treasury not otherwise appropriated, the sum of Five Thousand Dollars annually, for the space of four years, to be paid in September each year, to the Treasurer of said Society, on a requisition of the Treasurer of this State, signed by the President and Recording Secretary of said Society, which sum shall be used only for the purpose of paying premiums, and for no other purpose whatsoever."

FARMS, VINEYARDS, ORCHARDS, ETC.

Competitors for premiums in this department are requested to give *immediate* notice of their intention, to the President or Corresponding Secretary, that the committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the committee unless received before the first day of August.

It is of especial importance to Grain Growers that they bear the above in mind.

Best improved Farm	$200
2d do do	100

No premiums will be awarded for manufactured articles not produced in California, yet the Society will be happy to place such articles, with the names of the importers or exhibitors, on exhibition.

CATTLE SHOW.

The Cattle Show will be held near Sacramento, and will take place on the third and fourth days of the Agricultural Fair.

Competitors for premiums on animals must deliver a list of those intended for exhibition to the committee, on or before the first day of the Fair.

Stock must be on the ground before 10 A. M. of the second day of the Fair, when proper places will be assigned them, and on the days of the Cattle Show must remain in their places from 10 A. M. to 4 P. M.

Discretionary premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of premiums.

Each Committee is authorized to recommend special premiums upon objects that properly belong to the class assigned to them.

The managers of the Society will be present during the Fair to give directions to all who may wish to enter animals or any articles for premium or exhibition, and forage will be furnished gratis for all animals entered for premiums.

The Society earnestly desire to be informed, at the earliest possible moment, how far the different Farmers in the State can co-operate in this undertaking, and what specimens they intend to exhibit—so that suitable provision may be made for their contributions.

All communications upon the subject, will be promptly responded to, and all information cheerfully rendered.

The announcement of the awards, together with appropriate exercises, will take place on the last day of the Fair.

Address the President or the Corresponding Secretary, at Sacramento.

Circular.

The Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes daily more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work but this will not suffice. Unless the Farmers, Merchants, Lawyers Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. Hutchinson, President.

O. C. Wheeler, Rec. Sec.

Sacramento, June 23d, 1855.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co., have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanying the same.

Every thing of like liberality from our citizens, in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. Hutchinson, President.

Sacramento, July 5th, 1855.

Why Does Land Produce Weeds?—Because there is more wild, or library matter in the soil accumulated by ages of the growth and decomposition of vegetation, than there is of that property required for the crops we wish to raise. As we have often said, "burn a plant and the ashes will show what the soil is composed of." The ashes are what is drawn from the earth. By the decomposition, what was drawn from the atmosphere, has been liberated, and escaped in the form of gas. The ashes are mineral, and never exist, naturally, in the atmosphere. The ashes of all plants, consist of the same substances, only in different proportions. Like soap, which is grease, and alkali, but when properly combined, are neither, but a new compound. So with soils. If the compound is largely wild, or vegetables, it will produce weeds; make an excess of phosphate of lime, and it will as naturally produce wheat; give it an excess of alkali, and it will produce potatoes. A farmer should fit his crop to the soil, or his soil for his crop.

Prizes for Mowing Machines.

The Trustees of the Massachusetts Society for Promoting Agriculture, believing that the introduction of labor-saving machines in field operations, especially those employed in mowing, promises to effect a most beneficial change in the agricultural economy of New-England, are desirous of bringing this subject to the earnest and immediate attention of the farmers of Massachusetts. For the purpose of forwarding the movement now being made in this direction, they offer the following premium:

To the possessor of the mowing machine which shall cut during the present season, with the greatest economy and to the best advantage, not less than fifty acres of grass within the State, the machine to be worked by horse or ox-power, $600.

All other things being equal, the greatest number of acres cut by any one machine exceeding fifty, would entitle the competitor to the premium.

Every competitor must give notice to the Trustees of his intention to compete for the premium, on or before the 17th of June next. He must at the end of the season, or before the 10th of September next, furnish satisfactory proof of the number of acres cut by the machine during the season. He must also keep a record of each day's work; the number of hours actually at work in each day; the number and kind of animals employed, stating when any one of the same, if any, changed, and the reason therefor; the name of the maker of the machine; its cost; if new this season; any accidents or breakages which have occurred in working it, and the nature of them, and how repaired, together with any suggestions which may seem useful in preventing a recurrence of them; which record shall be submitted to the Trustees at the close of the working season of the machine.

Competitors are not precluded from competing for any similar premiums offered by County Societies or individuals, nor are they confined to mowing on their own land. It is also understood, that all persons, procurers of a machine, whether as owner, lessor or maker, resident of the State or otherwise, are entitled to compete for this premium.

The Trustees reserve the right of dividing the premium among equal claimants or of withholding it altogether, provided they are of opinion that no competitor has by his performance with his mowing machine made so great a saving in labor and expense over the old method of scything, as to enable them to recommend its general introduction and use, in which case, the premium will be renewed for the succeeding year's competition.

As a further incentive to the skill and ingenuity of the manufacturers of mowing machines, the Trustees offer another premium of $1,000 to the maker and exhibitor of the best mowing machine, to be awarded in the year 1856.

To entitle any person to the premium the machine, with full particulars of its principles of construction, weight, and selling price must be entered for competition with the Trustees on or before the 1st of June, 1856. A general trial will be had of all the competing machines, due notice of which will be given, together with all needful particulars at the commencement of the season of 1856.

It is to be hoped that there will be a large competition for the premium offered this year, and that manufacturers who propose to compete for the one in 1856 will take pains to introduce their machines for this season's work. The Trustees in awarding the $1 000 premium will not confine themselves to the single trial which will be afforded to competitors to exhibit the powers of their machines, but will also take into account the merits of each as displayed in competing for this year's premium, and in its ordinary working both for this and the coming year, whenever and wherever an opportunity is afforded of seeing it in operation.

The County Agricultural Societies are earnestly invited to appoint Committees to aid the Trustees in awarding the prize offered for this year, who shall inspect the working of competing machines in their several districts, and in reporting the result of their observations to the Trustees. One or more of the Trustees, will endeavor to visit each county during the season to see some portion of the work be performed by each machine, but from the necessity of the case, great reliance must be had upon the cordial and hearty co-operation of the County Societies.

The Trustees have adopted the following Committee to attend to the details connected with the subject, viz:

Thos. Motley, Jr.
G. W. Lyman.
C. G. Loring.
Rich'd S. Fay.
W. S. Lincoln.

All communications may be addressed to Thos. Motley, Jr., Jamaica Plains, or Rich'd. S. Fay, Boston.

Boston, May 28th, 1855.

Tobacco.—We have seen, (says the Santa Barbara Gazette,) within the past week, a quantity of tobacco, raised within the limits of this city, which is now being cured. The quality of this tobacco is said by competent judges, who have been engaged in the cultivation of the plant in the Atlantic States, to be equal to that raised in the Island of Cuba. The climate here appears to be particularly favorable for curing the tobacco after it has attained its growth, and at the same time the great difficulty which is experienced from the tobacco worm elsewhere is not met with in California. We trust that specimens of this tobacco will be forwarded to judges of the plant in the upper part of the State, in order that they

may have an opportunity of comparing the quality of the article raised in this section of the country with that of the northern portions. The very great importance of the successful introduction of this crop by the farmers of our neighborhood should be an inducement to those interested in the advancement of our county to engage in cultivation of the plant, and in the diffusion of the information necessary among those who are otherwise unable to obtain it. Should, as we hope will be the case, an Agricultural Society be established in this county, there will be an excellent opportunity for our farmers to obtain information in regard to the cultivation of many crops which would undoubtedly prove extremely profitable, but which are neglected at present.

LIME, MARBLE AND COAL.—Our patriotic and enterprising fellow citizen, Mr. Gwin, who has the lime depot on the Plaza, informs us that he has recently opened a magnificent quarry of marble near his limestone quarry on Feather river. We say *on* Feather river, but that is scarcely the fact; both quarries lying about eight miles from the river, and some thirty miles from Marysville. These quarries lie six miles beyond the recently discovered coal mine, of which we have heretofore spoken, and which, Mr. Gwin assures us, will, when opened, prove very rich and very extensive. We are gratified to learn that arrangements have been perfected for the immediate development of this coal mine. The road from the lime and marble quarries to the river leads by the coal mine, and Mr. Gwin anticipates much benefit from the coal in calcining his limestone. At present Mr. Gwin is compelled to haul his lime the whole distance to Marysville, in wagons; but he intends establishing an *embarcadero* on the river, near the coal mine, and using flat boats for the supply of Marysville and Sacramento with the three important articles of lime, marble, and coal. The marble is beautifully variegated and susceptible of a very fine polish. He is about constructing a mill on the ground, for the purpose of making marble dust for the use of soda manufacturers. Most cordially do we wish Mr. Gwin success in his enterprises. He is a social benefactor and deserves success.—*Marysville Herald.*

SILVER LAKE.—The following description of this beautiful sheet of water, is extracted from the Placerville American:

"Directly west of that portion of the Sierras known as the Round Top, in the midst of pines, like great colossal columns, stand thick around, lies Silver Lake, so lifted up above the lower world that the birds there never sing; but we will speak of this and the reason for it presently. Silver Lake, so called from the extreme purity of its waters, is the source of the extreme southern fork of the South Fork of the American river. It lies to the right of the emigrant road, though a trail easily traversed by pack animals, passes along its shores. It is one of those charming little lakes peculiar to the mountains of California full of life in its myriads of speckled trout. But the trout only is found, while in other larger lakes, as Lake Bigler, a variety of fishes abound. It is here that a small band of Digger Indians, from the lower country, pass the summer months, subsisting upon both running and swimming game, and mountain clover, which they greedily devour, after submitting it to a kind of steaming process, rendering it equally tender and juicy, and quite as palatable as the dish their more civilized neighbors consume under the name of greens. This lake, unlike others upon the mountains much larger than it, never freezes. There is a Digger tradition, accounting for this peculiarity, which we will give in a future number, as also the reason why the little birds around its shores, never sing."

THE FREMONT CLAIM.—At a recent meeting of the settlers and miners, held at Mariposa, B. F. Morris, Chairman, and L. Vining, Secretary, after explaining the object of the meeting, the following resolution was passed:

Resolved, That in the opinion of this meeting, that any attempt by the United States Surveyor, to survey land of John C. Fremont to locate the Alvarado grant to ten leagues of land upon the mountain lands and settlements of Mariposa county, lying easterly of the San Joaquin plains would be illegal and an unauthorized violation of the national law, and a wanton aggression and positive infringement of the rights of the settlers and miners already in possession of and residents upon the aforesaid lands.

INFORMATION WANTED.—Information is wanted by an afflicted mother, of a son, a young man, and named Thomas Lamie, of Cambridge. He formerly resided in St. Louis; and in April, 1852 in company with Edward Heep, sailed for California from New-York, by way of Panama. Since then, no intelligence has been had of him. His mother, who is aged, resides in Concord Avenue, Old Cambridge. Any communications in relation to the matter, sent to her address, or this office, will be gratefully received.

GLASS.—A new manufactory of plate glass, says an exchange, has been commenced in Williamsburg, (N. Y.,) where plates of glass ten feet wide and twenty feet long will be made. A plate ten feet square can be made so strong that it will hold a ton weight, and so clear that the fine print of a newspaper can be readily read through a plate four inches thick. It is a singular fact that the best English plate glass is made of American sand.

THE following is a true copy of a sign upon an academy for teaching, in one of the western States: "Freeman & Huggs, School Teachers. Freeman teach the boys, and Huggs the girls."

Miscellany.

UNION.

[This is true poetry; it breathes patriotism, and it will awake in every breast a greater love and a truer devotion to that anchor of our liberties. We have seen this beautiful strain copied frequently. It was read by Rev. Mr. Corwin in his address on the 4th July, at San Jose, and we presume it was original. It denotes a heart in the right place, whoever he may be, and it should be published in every paper in our land.—ED.]

"You *can't* sever the Union, for ye cannot undo,
The relation of brother to brother;
Ye may coldly regard him and slander him too,
But when sorrow o'ertakes him your heart will be true,
To the love you once bore him when together ye grew,
In peace, by the side of your mother.

You can't sever the Union, for ye cannot untwine
The numberless ties that have bound you,
Like the thread of a beautiful and delicate vine,
That has silently spread in the rain and the shine,
Till, when you would hurst them, each gossamer *line*,
Turns to cord and cable around you.

You can't sever the Union, for ye cannot forget
How your fathers stood shoulder to shoulder;
How, like one in privation, their stern hearts were set;
How, like one in the conflict, our foemen they met:
How, like one they melted by sorrow, and yet
How in danger, grew bolder and bolder!

You can't sever the Union, for you cannot divide
The flag of our freedom and glory;
It waved o'er the field, where our forefathers died,
Their children unfurl it with reverend pride,
Hard, hard, would the task be to throw it aside,
And tell the sad nations the story!

What! sever the Union! who, who, then shall claim
The grave of our country's defender?
What, the North and the South fan the fuel to flame,
And fight o'er *his* ashes whose glorious name
Is a watchword of Liberty, Justice and Fame;
We would all sooner die than surrender!

No, we cherish the Union with heart and with hand,
As we cherish our home and our altars;
Through the length and the breadth of our wide spreading land,
Alone by the eye of Omoipotence spanu'd,
We rise in our strength, and the craven withstand,
Who doubts, or dissembles, or falters."

HIDDEN LIGHT.

I MUST mistrust the voice
That says all hearts are cold,
That mere self-interest reigns,
And all is bought and sold.

I must mistrust the man
Who will not strive to find
Some latent virtue in
The soul of all mankind.

Yes! If you say the fount
Is sealed and dry, I know
It needs a wiser hand
To make the waters flow.

If you would still appeal
To evil life in all,
I know a demon-band
Will answer to your call.

But when the Lord was gone—
The Lord who came a slave—
Two angels fair and bright
Sat watching by the grave.

And from that blessed hour,
With an immortal mien,
In every tomb of Good
Some angel sits unseen.

The spell to bring it forth?
With lowly, gentle mind,
With patient love and trus
Go seek—and ye shall find.

Household Words.

The Old Monumental Bell and House.

THE San Francisco Alta California, of July 11th, says: We briefly noticed, in a recent edition, the demolition of the old time honored house of the Monumental Engine Company, No. 6, situated on Brenham Place, at the head of the Plaza. There are, however, some interesting reminiscences associated with this old building, which should secure to it more than a passing notice. It is so intimately connected with some of the most exciting phases of the history of our city, that although our exhuming them at this moment, may not save them from the oblivion to which all things mortal must pass, yet few will gainsay that this venerable landmark is unworthy the attention, and which is as richly due the noble band of men attached to it, as to the edifice itself. The Company was formed as early as June, 1850; but was not regularly organized and admitted until September 12, 1850, at which time there were near three hundred members attached to it. In those days, when the destructive element was not kept within the narrow limits to which the efforts of the Department now confine it, *everybody* belonged to a fire company; not to be a member, was rather the exception to the rule. Hence, there were few merchants or property owners in town, who at that time did not count it not only an honor to be enrolled, but had the additional incentive of his own goods and property. In a word, there were fewer white kid-glove members than can be boasted now-a-days. The engine house which has just been torn down, was built by William Diver, the first President of the Company, in October, 1850, and at the same time, the famous alarm bell which has figured so conspicuously in the history of the city, was placed in the belfry. This bell was cast by Hooper, the celebrated bell founder of Troy, N. Y., and sent here in 1850. Its weight is 271 lbs., and it was the first bell ever erected in California, excepting, of course, the ancient Spanish bells attached to the Missions. Its voice has been the requiem of the dead of the Company—of Daniel Webster, and of Henry Clay; it has pealed its noisy clangor to celebrate the anniversary of Independence—the admission of the State into the Union, and the various celebrations of the Department. As the red glare of the Fire King beamed across the city, this bell has been first to send forth its warning tones, and in those exciting days when the Vigilance Committee held their dread councils, they were summoned by the two solemn taps of the "Monumental Bell." For some time, indeed, this was the only bell in town, excepting that of the Presbyterian Church, at the corner of Powell and Jackson streets. This, however, was not hung for some time, and was struck only suspended sufficiently above the ground to admit of its being sounded.

The first fire for which the Monumental bell was rung was at the burning of the two steamers Santa Clara, and Hartford, at the end of Long Wharf, in 1850. It has now been suspended in a temporary belfry erected over the house fronting on Dupont street, and where the engine will be housed until the new building is completed. Well may the Monumentals call the bell their "pet," and regard its "long tongue and empty head," with a peculiar affection. The house has been the scene of innumerable festivities and merry-meetings extraordinary. Here Bacchus has often reigned supreme: the grape-wreath encircling the brows of the jolly god only equalled as an hillarious emblem by the good humored faces so wont to throng the building. Nor have the smiles of Beauty been wanting to enhance these scenes. Scarcely a celebration since the erection of the house but the occasion has been rendered doubly welcome by the attendance of many estimable ladies, whose gifts of wreaths and banners are yet retained by the Company as tokens of the appreciation in which they are held by the fair sex. The Monumentals also have their list of sad recollections as an offset to the remembrance of happy days. Since their organization, sixty-three members have died. In the cholera days of '50,' eleven in one week were stricken down; one has been killed and three crippled, in the exercise of their duties.

The new house is to be built under the superintendence of a Committee of the Company. It will be 68 feet 9 inches in depth by 21 feet 9 inches in front; to be constructed partly of Malekadel stone, from the Point of that name about two miles below Benicia, from the quarries of Mr. William Andrews. The front of the first story will be of Chinese granite. The lower, or basement story, will compose an engine room and sitting room for the Company; the second story, a room 20x20, for a library; and the balance, 48 feet, a meeting room for general business. Altogether, it will be a creditable building, and, to judge from the plan which we have attentively examined, it will prove an ornament to the city. It will be completed in about forty days.

Sam Slick's Bargain.

"You will find," said the Doctor, "the men (I except the other sex always,) are as acute as you are at a bargain. You are more likely to be bitten than to bite, if you try that game with them."

"Bet you a dollar," says I. "I sell that old coon as easy as a clock. What! a Chesencooker a match for a Yankee! Come, I like that,—that is good. Here goes for a trial at any rate."

"Mounseer," says I, "have you any wood to sell?" We didn't need no wood, but it don't do to begin to ask for what you want, or you can't do nothing.

"Yes," said he.

"What's the price," said I, "cash down on the nail?"

I knew the critter would see "the point" of coming down with the blunt.

"It's ten dollars and a half," said he, "a cord at Halifax, and it don't cost me nothing to carry it there for I have my own shallop—but I will sell it for ten dollars to oblige you."

That was just seven dollars more than it was worth.

"Well," says I, "that's not high, only cash is scarce. If you will take mackerel in pay, at six dollars a barrel (which was two dollars more than its value) praps we might trade. Could you sell me twenty cord?"

"Yes, may be twenty-five."

"And the mackerel," said I.

"Oh," said he, "mackerel is worth only three dollars and a half at Halifax. I can't sell mine even at that. I have sixty barrels, number one, for sale."

"If you will promise me to let me have all the wood I want, more or less," says I, "even if it is ever so little, or as much as thirty cords, at ten dollars a cord, real rock maple, and yellow birch, then I will take all your mackerel at three dollars and a half, money down."

"Say four," said he.

"No," says I, "you say you can't get but three and a half at Halifax, and I won't beat you down or advance one cent myself. But mind, if I oblige you by buying all your mackerel, you must also oblige me by letting me have all the wood I want."

"Done," said he.

So we warped into the wharf, took the fish on board, and paid him the money, and cleared fifteen pounds by the operation.

"Now," says I, "where is the wood?"

"All this is mine" said he pointing to a pile, containing about fifty cords.

"Can I have it all, if I want it?" said I.

He took off his cap and scratched his head—scratching helps a man to think amazingly. He thought he had better ask a little more than ten dollars, as I appeared ready to buy at any price. So he said

"I may have it all at ten and a half dollars."

"I thought," sais I, "you said I might have what I wanted at ten."

"Well, I have changed my mind," said he, "it is too low."

"And so have I," sais I. "I won't trade with a man that acts that way." and I went on board, and the men cast off, and began to warp the vessel again up to her anchor.

Lewis took off his cap and began scratching his head again; he had overreached himself. Expecting an immense profit on his wood, he had sold his fish very low; he saw I was in earnest, and jumped on board.

"Captain, you will have him at ten, so much as you want of him."

"Well, measure me off half a cord."

"But didn't you say you wanted twenty or thirty cords?"

"No," sais I. "You said that I might have that much if I wanted it, but I don't want it; it is only worth three dollars, and you have the modesty to ask ten, then ten and a half; but I will take half a cord to please you—so measure it off."

He stormed, and raved, and swore, and threw his cap down on the deck and jumped on it, and stretched out his arm as if he was going to fight, and stretched out his wizzened face, as if to make halloaing easier, and foamed at the mouth like a hoss that eat lobelia in his hay.

Ladies' Department.

THE BLOOM OF AGE.—A good woman never grows old. Years may pass over her head, but if benevolence and virtue dwell in her heart, she is as cheerful as when the spring of life first opened to her view. When we look upon a good woman, we never think of her age; she looks as charming as when the rose of youth first bloomed on her cheek. That rose has not faded yet; it will never fade. In her neighborhood she is the friend and benefactor. Who does not respect and love the woman who has passed her days in acts of kindness and mercy? We repeat, such a woman cannot grow old. She will always be fresh and buoyant in spirits, and active in humble deeds of mercy and benevolence. If a young lady wishes to retain the bloom and beauty of youth, let her love truth and virtue, and to the close of life she will retain those feelings which now make life appear a garden of sweets—ever fresh and ever new.

A SWEET VOICE.—A sweet voice is indispensable to a woman, I do not think I can describe it. It can be and sometimes is cultivated. It is not inconsistent with great vivacity, but is often the gift of the gentle and unobtrusive. Loudness or rapidity is incompatible with it. It is low but not gutteral, deliberate but not slow. Every syllable is distinctly heard, but they follow each other like drops from the fountain. It is like the cooing of a dove, not shrill, nor even clear, but uttered with that subdued and touching *readiness*, which every voice assumes in moments of deep feeling or tenderness. It is a glorious gift in woman—I should be won by it more than beauty—more even than by talent, were it possible to separate them. But I never heard a deep sweet voice from a weak woman. It is the organ of strong feelings and of thoughts which have lain in the bosom, till their sacredness almost hushes utterance.—*Willis.*

A FAITHFUL GIRL.—A case of woman's love and devotion, says the Chicago Tribune, has recently been brought to our knowledge, which certainly equals anything that we have ever met with in the realms of romance. The circumstances occurred in this city, and are perfectly well authenticated. While the small pox was raging here a few weeks ago, a young man employed in a store on Lake street, was seized with the disease. It was of course, improper for him to remain there, and the people with whom he lived who were distant relatives of his, refused to permit him to stay in their house. The result was he was taken to the pest-house. It so happened that he was engaged to be married to a most estimable young lady. No sooner did she hear of his condition than she determined at once that she would nurse him. She underwent vaccination, and went where they had taken her betrothed—to the pest-house. Here she found him, alone, sick, wretched, deserted by all the world. And here she remained, like a ministering angel, waiting beside his bed of pain, soothing his distresses and attending to his wants. He died—but how consoling must have been his last moments. Though all the world had forsaken him, she whom he loved better than all the world, remaining faithful to the last. Her hand it was that smoothed his pillow; her eyes still beamed upon him with mournful but unabated affection; into her ear he poured his last words of love, of sorrow, and of hopes that in this world might never be fulfilled. It roused our mind when we heard it, the words that Bulwer puts in the mouth of one of his characters: "to be watched and tended by those we love, who would not walk bend and barefoot over the world."

Valuable Recipes.

An ox's gall will set any color—silk, cotton, or woolen. I have used the juice of cactus, which faded at one washing, fixed by it.

A warm pan full of live coals on a table will save white goods. The spot should be rubbed with flannel while warm.

An ounce of quicklime, beat up with the whites of two eggs, and put on with a feather, is the cleanest and surest bed-bug poison.

SPECIAL NOTICES.

☞ **Sands' Sarsaparilla.**—This preparation has now borne the test for over fourteen years' experience, since its first introduction to the public, and each succeeding year brings forward renewed testimony to its great value as a medicinal remedy. The unfortunate victim of hereditary disease, with swollen glands, contracted sinews, and bones full carious, has been restored to health and vigor. The scrofulous patient, covered with ulcers, loathsome to himself and to his attendants, has been made whole. Hundreds of persons, who had groaned hopelessly for years under cutaneous and glandular disorders, chronic rheumatism, and many other complaints springing from a derangement of the secretive organs and the circulation, have been raised as it were from the rack of disease, and now, with regenerated constitutions, gladly testify to the efficacy of this inestimable preparation.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with Agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President.

☞ **The Editor of the Boston Post says:** We have not, until recently, been acquainted experimentally, with the true value of WISTAR'S BALSAM. From this truly valuable preparation we have received a present benefit, having recently used it in a case of severe cold and cough, with entire success, and most cheerfully recommend it to those alike afflicted. It is a scientific preparation, and worthy of confidence."

This Balsam is made from materials which Nature has placed in all northern latitudes, as an antidote for diseases caused by cold climates.

"Nature is but the name for an effect
Whose cause is God."

Let us not neglect her plainest dictates.
Sold by all druggists.

SANDS' SARSAPARILLA,
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of

Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last never found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

H. & R. S. HART, A. M. TROWBRIDGE,
GEO. T. DEAN, C. EASTWOOD.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m

MISCELLANEOUS.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,

EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]

T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink ball so inch or more, draw up the piston, then wipe the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on tightly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upwards, the piston pens with the cap downwards.

Use good ink, free from sediment; Hendley & Field's American Fluid, also Bryan & Wilcox's, and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-5

Agricultural Warehouse,
193 *front street, New York.*

THE subscriber offers for sale an assortment of Agricultural Implements of the latest and most approved kinds, among which are the celebrated Premium Plows, which were awarded the highest premium of the American Institute in 1846, 1848, 1849, 1850, 1851, 1852 and 1853. Also, Eagle, Centre Draught, Peoria, and all other plows in general use.

Pitts, Hall's and Smith's Horse Powers and Threshers, Burrall's, McCormick's, Hussey's, Seymour & Morgan's, and Ketchum's Mowing and Reaping Machines. Yankee self-sharpening Straw Cutter—the best article in use: Corn Shellers, Fanning Mills, Picks and Pick Handles, &c., &c.

TREADWELL & CO.,
v3-13 corner California and Battery streets.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

Ranch For Sale.

A finely located Ranch of three thousand acres, about twelve miles below Colusi. This is one of the finest pieces of land for grazing or Agricultural purposes in the State; well watered, and all portions of the best quality of soil.

I will be old at a bargain. Plans of the lot and all particulars given on inquiring at the office of CALIFORNIA FARMER, on Fourth street, between J and K. v4-1

TOBACCO

Virginia Manufactured Tobacco Agency.

GREENE, HEATH & ALLEN have removed from Commercial street to the cor. of Washington and Battery streets where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best markets in Virginia; and the trade generally are respectfully invited to call. Amongst the brands offered are the following:

200	boxes	Carnation's Four Ace;
75	half boxes	do Medal;
50	packages	do Sovereign of the Seas
60	do	do Brake o' the Pacific;
100	boxes	Hulse's Four A's:
150	do	Saunders' Harry of the West;
50	do	James Boyd's Gold Leaf;
50	do	do Anna Bishop;
25	do	A. Thomas' Club House;
50	do	Fergu on's Star of the West;
50	do	Miller & Co.'s Hawk's Bluff City;
24	do	Royster's Navy's Own;
40	do	do Invincible;
100	do	Thornton's Cantelope;
50	do	Dickinson's Witch's Eye;
50	do	Crosby & Worster' Metropolitan.

In addition to the above, we have 2,000 packages of ordinary brands, which we sell exclusively on Commission for the Manufacturers of Virginia, we can furnish the trade with any quantity or quality required, at the lowest rate. v3-16

Latest Importations.

WE would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of

STAPLE AND FANCY GOODS

which have been received direct from the manufacturers and importers by the last week, per clipper ships "Flying Cloud," "Samuel Russell" and "Red Rover," which, in addition to those before stock, makes it by all THE LARGEST IN THE STATE OUT OF SAN FRANCISCO! And for quality and cheapness, we defy competition; and we say, without fear of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.

200 Parasols, new, rich and beautiful;
150 pc. latest style Bonnet Ribbon and Trimmings;
50 pcs. assorted rolls, Barrege and Tissues;
85 pat erns Ivory Bobbin and Tassels;
25 pc. plain and muted Swiss;
40 pc. plaid, striped and plain Jconet;
865 yd. Mesh Lawns, $1 a Dress Pattern.

Mens', Youths' and Boys' Summer Clothing.

Manufactured by in House in New York, in the very best style.

BONNETS.—Misses' Hats, Boys' Hats, &c.

Together with a great variety of other Fancy Goods, for the Fourth of July celebration, to numerous to mention.

CHAS. CROCKER & CO.,
v3-26 246 J street, between Eighth and Ninth.

New Invention!

Now, Count Them Chickens All

THE undersigned begs leave to offer to the public a new and improved method of hatching the eggs of domestic fowl.

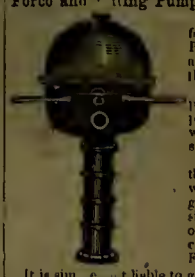
After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from four to five A dozen hens can be converted into prolific mothers of Chickens, Ducks, Goslings or Turkeys. After the first hour, each one for twenty days, this is the certain result; and requires but little attention — but every twenty-four hours — the cost of fuel and preparation being only some $2 50 to $4 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all the curious will be present. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco.

v4-26 JOHN J. FULTON,
Third street, South between Market and Mission.

Contract in Butter and Cheese.

25,000 POUNDS New California Butter, 1,200 dozen Cheese, in store. Being supplied daily with Fresh Butter and Cheese, by two of the largest dairies in the country, we are enabled to offer large inducements to hotels and others in the line of Butter, and are among the very lowest prices in the State.



v3-26 BRADSHAW & CO.

Grain Bags.

50,000 GRAIN BAGS for sale very cheap for Cash. Apply at the Sewing Factory, 146 Sansome street, between Washington and Jackson sts, San Francisco. v42

MISCELLANEOUS.

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, team or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATHER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-3 3m.

San Francisco ahead of the World!

Ever on, on space with the Age and Times!!

Hurrah for Vance's new Daguerreotype Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing looking-more perfect, and with greater power than any ever before used in his country.

2d. Because he has *the largest light in the world*, from which he can turn those distinct lights—top, side, and half side light—that now enables him to overcome the great difficulty which every artist in the city has to contend with—namely: Impossible to obtain perfect likenesses, different formed countenances require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is coated with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparation to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, of every shading, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Auction. v4-1

Now is your Time to Buy Cheap Goods!

HAMBURGER & BROTHERS, who have been established in this city since 1850, and well known all over the section of country, take pleasure to inform their friends and customers in general, that they have now in store, and receiving in addition by every clipper and steamship, from New York, a general assortment of Fancy and Staple Dry Goods, consisting of plain black and brocade Silks; plain, changeable and plaid colored Silks, full qualities; French and American Lawns; white and colored plain and embroidered Swiss Muslins; Barages and Silk Tissue of all colors and prices; Needle Worked Bands, Collars, Sleeves, Chemisettes and Linen Cambric Handkerchiefs; Swiss and Lace Curtains.

A large assortment of all kinds of Bonnet Ribbon, Irish Linens, Cotton Shirting and Sheetings of all styles. Ladies' white and colored Cotton Hose; Kid, Silk and Lisle Thread Gloves. With a general assortment of Fancy Goods too numerous to mention, which we offer to sell at twenty-five per cent. cheaper than any other house in this city, as we are direct importers of our goods.

A call is only necessary—you can judge for yourself.

☞ Ladies are particularly invited to call.

Store, 91 J street, near Fourth, Sacramento.

P. S.—We keep constantly on hand a supply of Straw and Straw Bonnet, and all kind of Millinery Goods. v3-25

Storage and Commission.

THE subscriber having purchased the entire interest of Messrs. Tilden & Little, in the Storage and Commission Business, heretofore conducted in the EMPIRE WAREHOUSE, is now prepared to continue the business in all its various branches, at this old established and thoroughly Fire-Proof Warehouse, on as reasonable terms as any other Warehouse in the city; will make cash advances on shipments, when desired; and hopes to retain a continuance of the old custom.

HIRAM W. BEEBE.

Reference.—Messrs. Cash, Hosier & Co. J. W. Benson, James Doyle; Barber & Byrd.

Notice.

WHEREAS certain persons are committing depredations on the property of Messrs. Tilden & Little, late lessees of the Empire Warehouse, and whereas the undersigned may cause many alarm, I hereby caution all persons against purchasing any of the property of the said Messrs. Tilden & Little, which I expect are removed contrary to their contract with me, and the same is the property of Messrs. Fisher, Mann and myself, and I am now prepared to settle upon presentation of the old Receipts.

HOTELS.

Orleans Hotel,

Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel,

SACRAMENTO CITY, CALIFORNIA.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families traveling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with this Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at the Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3-16 1-tf C. M. DAVIS, Proprietor.

Wilson's Exchange,

By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. JAMES, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v-25

Varieties

A want of confidence has kept many a man silent. A want of sense has made many persons talkative.

With every act of life, we are building up for ourselves the great, the endless future, as we construct it so it awaits us.

The wheat crop of Oregon this year, will probably be light from injury by smut. Many fields, it is said, will not be harvested at all.

No man ever left his mark on the age in which he lived, who was not an enthusiast. No true work was ever accomplished without enthusiasm.

A Dead Shot.—A physician who resides in the southern portion of this city, upon visiting a patient in the extreme north, was asked by the sick man, "if he did not find it very inconvenient to come such a distance." "Not at all, sir," replied the son of Esculapias, "for having another patient in the next street, I can kill two birds with one stone." "Can you, sir!" replied the invalid, "then you are too good a shot for me;" and immediately dismissed him.

Home and Country.—The ties of Family and of Country were never intended to circumscribe the soul. Man is connected at birth with a few beings that the spirit of humanity may be called forth by their tenderness; and whenever domestic or national attachments become exclusive, engrossing, clannish, so as to shut out the general claims of the human race, the highest end of Providence is frustrated, and home, instead of being the nursery, becomes the grave of the heart.—*Channing.*

A celebrated comedian arranged with the green grocer, one Berry, to pay him quarterly; but the grocer sent home his account long before it was due. The comedian in great wrath called upon the grocer, laboring under the impression that his credit was doubted, said: "*I* say here's a pretty mul, Berry; you've sent in you *bill*, Berry, before it was due, Berry; your father *the* elder Berry, wouldn't have been such a goose, Berry. But you need not look so black, Berry, for I don't care a straw, Berry, and shan't pay you till Christmas, Berry.

Wooden Nutmegs Outdone.—There is a Parisian dandy, who, we think rather outdoes Connecticut: C—— had at his residence a complete costume of a groom. When offering an attention to one of the fair sex, he used to say, "Permit me to send you a bouquet by my black servant." He then repaired to his garret, took out his black bottle, polished his face and hands, put on his livery, and knocked at the lady's door. "Here," he said, "are some flowers by master to madame." He had spent his last five francs in the purchase. Madame was so delighted with the present that she presented a louis to the bearer. That is a clear pocketing of three dollars, and a lady's favor into the bargain.

"The best thing I have heard," writes "J. H. L." "in exemplification of the saying, 'Providence smiled on me,' I heard a Dutchman give. (I'll give it to you in English; you, being a Knickerbocker, must put the polish on.) 'Have you got through harvest, Hans?' 'Yes; me and my boys worked like the devil all the time, very hard: had so much to do, did not know as we would get through before winter: but we did. 'Providence smiled on me,' and we have just finished.' 'How did Providence smile on you?' 'Why, you see He just blasted about forty or fifty acres of my wheat, so that it was not worth reaping, and so, you see, we have just finished!'"—*Knickerbocker.*

"Is this 'one-horse town,'" writes a Mobile friend, "as our New Orleans neighbors designate it, there resides one whom we will call Tom for brevity. He is a shrewd, plain-dealing tailor as one could wish to 'trade with,' and as our rivers have been low this season, and but little cotton in the market, Tom ventured in company with a friend in purchasing a lottery ticket in the Southern Military Academy Lottery, each sharing the cost and winnings, of course. The ticket was obtained, and Tom's name put on the agent's book for that purpose. Time wore on, and in course of a few days the lottery was drawn; and every one was on tiptoe to know who was the lucky man. The agent received the list of prizes from Montgomery, and sure as shooting, Tom Tightfit's name was coupled with the fifteen thousand dollar prize! Eureka! The agent sent his boy down to Tom's store to inform him of his good luck, and desiring him to bring up his ticket and get his check for the dimes. But alas! Tom's friend had the ticket in his pocket, and had started a few hours previous on a hunting trip, and Tom, not knowing the number on the ticket, took it for granted as 'all O. K.' He sauntered into his neighbor's store and very confidently whispered his good luck and requesting in a very neighborly manner to go along and *liquidate*. At the bar of course it was talked over, when one or two others were admitted into the secret. One treated, then another, and so on until Tom was toasted, tumbled, and toddled until his tongue ran fifteen to the dozen. A messenger was dispatched to the woods to hunt up Smith, the ticket-holder. One, two, three hours passed, and no Smith, and Tom's luck was the talk of the town. When —— ah-hem! An engineer of one of our river boats walked into the ticket-office and pulled out of his pocket the lucky ticket, *his* name being Tommy Tightfit as well as the other! Let us draw a veil over Tommy's feelings during the next week of his life. He looks even now as if he had been guilty of stealing sheep!"—*Knickerbocker.*

MEDICAL.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." Dr. Carswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

Dr. A. H. Macanair, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. Shaw, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

Samuel A. Walker, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe cold during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

Hon. Samuel S. Perkins says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building,

South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

Dr. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself *principally* to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and *Hospitals*, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Diseases of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus;) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

NEW BOOKS.

C. M. SAXTON & CO.,

AGRICULTURAL BOOK PUBLISHERS.

C. M. SAXTON & CO., 152 Fulton street, New York, offer for sale the following late and valuable publications:

Downing's (A. J.) Landscape Gardening. A treatise on the theory and practice of land cape gardening. Adapted to North America, with a view to the improvement of country residence, comprising historical notices and general principles of the art. Directions for laying out grounds and arranging plantations, the description and cultivation of hardy trees, decoration accompaniments to the house and ground, the formation of pieces of artificial water, flower gardening, etc., with remarks on rural architecture. Elegantly illustrated with a portrait of the author. By A. J. Downing. Price, $4.

The Practical Fruit, Flower and Kitchen Gardener's Companion, with a Calendar. By Patrick Neill, LL D. Adapted to the United States, from the fourth edition, revised and improved by the author. Edited by G. Emerson, M.D. With notes and additions by R. G. Pardee, author of "Manual of the Strawberry Culture." With illustrations. Price, $1 25.

Munn's (B.) Practical Land-Drainer; being a treatise on draining land, in which the most approved systems of drainage are explained; with full directions for the cutting and making of drains, and with many illustrations. By B. Munn, Landscape Gardener. Price 60 cents.

Elliot's (F. R.) American Fruit-Grower's Guide in Orchard and Garden; being a compend of the history, modes of propagation, culture, &c., of fruit, trees and shrubs, with descriptions of nearly all the varieties of fruits cultivated in this country; and notes of their adaptation to localities, soils, and a complete list of fruits worthy of cultivation. By F. R. Elliot, Pomologist. Price, $1 50.

Dadd's (Geo. H.) American Cattle Doctor; containing the necessary information for preserving the health and curing the diseases of oxen, cows, sheep and swine, with a great variety of original receipts and valuable information in reference to farm and dairy management, whereby every man can be his own cattle doctor. By G. H. Dadd, M.D., Veterinary Practitioner. Price $1 25.

Norton's (John P.) Elements of Scientific Agriculture; or, The Connection between Science and the Art of Practical Farming. (Prize Essay of the New York State Agricultural Society.) By John P. Norton, M.A., Professor of Scientific Agriculture in Yale College. Adapted to the use of Schools. Price, 75 cents.

Johnston's (James F. W.) Catechism of Agricultural Chemistry and Geology. Adapted to the use of Schools. Price, 25 cents.

Johnston's (James F. W.) Elements of Agricultural Chemistry and Geology. With a complete analytical and alphabetical index, and an American preface. By Hon. Simon Brown. Price, $1 25.

Johnston's (James F. W.) Agricultural Chemistry. Lectures on application of chemistry and geology to agriculture. New edition, with an appendix, containing the author's experiments in practical agriculture. Price, $1 50.

Smith's (C. H. J.) Landscape Gardening, Parks and Pleasure Grounds. With practical notes on country residences, villas, public parks and gardens. By Charles H. J. Smith, Landscape Gardener and Garden Architect, &c. With notes and additions by Lewis F. Allen, author of "Rural Architecture," &c. Price, $1 50.

☞ The above books will be sent to California *free of postage*. v4-3 3t.

NEW BOOKS.

Anna Clayton; or The Mother's Trial. 12mo., cloth. Price $1. (Two editions in one week.)

A well-conceived and finely written tale, of high moral excellence.—[Boston Courier.

It is one of the most effective works issued during the past few years.—[Transcript.

It is decidedly the best popular tale of the season.—[Bee.

Second edition of *Burnham's History of the Hen Fever.* 12mo., cloth. $1 25.

The Boston Traveller says, "The sale of this book has already been immense—amounting in two weeks, to 20,000.

Burnham's new volume, the "History of the Hen Fever," is destined to have a great run. It is capitally written and illustrated, and is brim full of fun and spice. It will surely create a sensation.—[Ballou's Pictorial.

Turkey and the Turks. By Dr. J. V. C. Smith, Mayor of Boston. 320 pages. 12mo., cloth. 75c.

It is a most excellent work. It will have a large sale, for it embraces more real information about real Turks and their strange peculiarities than anything we have yet read.—[Post.

COLLINS & CO.,

PRACTICAL HATTERS,

(PREMIUM HAT STORE,)

157 *Commercial street, San Francisco.*

The undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at Collins & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

v4-1 COLLINS & CO.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,

No. 100 Merchant street, San Francisco, California.

We respectfully inform our friends and the public generally, that we have connected with our other business that of House Brokerage and General Directory, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for buying and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry,* (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *fifty-three thousand persons,* with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

Booksellers and Stationers

WHOLESALE AND RETAIL WAREHOUSE.

We beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of shippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

Blank Books—Ledgers, Journal, Cash, Invoice, Day and Record Books, in Russia, Sheep and Muslin Binding. Copying Books, Indexed and Plain Memorandum, Bank and Pass Books, Diaries, &c., &c.

Paper.—Bond, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.

Stationery.—A complete assortment of Law, Counting House and Fancy Stationery.

Bound Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

Blanks.—Law, Shipping and Custom House Blanks.

Miscellaneous.—Gold Pens, Razors and Razor Straps, Pocket Cutlery, Toilet Brushes; Cash, Deed, Date, Post Office and Envelope Boxes; Portable Desks, Gems' Desking Cases, Ladies's Toilet and Work Cases and Reticules, Port Monnies, Portmonery, Opera Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Pictorials, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.

GEO. W. MURRAY & CO., Montgomery Block.

N. B.—Particular attention paid to *filling orders.* v4-1

IMMENSE SACRIFICE!

There is no use in throwing 50 per cent. away these hard times, when you can purchase the same articles at

50 per cent. Cheaper

than in any other house in California.

HILLER & ANDREWS.

These well known Jewelers will commence selling off their immense stock of rich and valuable

Diamonds, Fine Watches,
Jewelry, Silverware, &c., &c.,

At New York cost. We do assure the public that there is no *humbug* in this, and we are determined to close out our

Immense Stock at Cost,

and invite the public to call and examine for themselves, before purchasing elsewhere. We have now, by far the largest stock in the State, and it is necessary that we reduce our stock.

Letters from Roving Jack.—No. 7.

Rose May.... School Land Warrants—Information Respectfully Solicited—The Subject partially Discussed—And Open for Discussion.

Merced County, July 26, 1855.

Editors Farmer: Possessing as I do a degree of gallantry, I very certainly would be guilty of perpetrating an unpardonable error, and would sadly misrepresent my nature, did I neglect to dedicate a portion of this article to the fair Poetess who has so kindly condescended to peer down from her lofty pegassus and thus breathe her plaintive and sublime effusions, and devote them to the gentle warning and desired reclamation of your humble and unworthy correspondent, over that lovely signature "Rose May." It matters not whether it be her true name, or simply a *non de plume;* in either case it is the same. Should it prove to be her real name, it is one of the sweetest in the world—and let it be a *non de plume*, it is *prima facie* evidence of the lady's good taste in making the selection.

Permit me, my fair friend, to express in my off-hand style my sincere regret at not being able to reply in the same sweet poetical strains. On the contrary, I must be frank to confess that I have no conception of the rules and principles of Poesy, and should I make the attempt, I much fear that it would be something like the following (which I have somewhere seen, in my passage over the railroad of life, at present cannot recollect where):

"Dear Fanny, there are moments when
Love gets us in a fix—
Takes the bit in his jaws, and without any pause,
Bolts away with us like a thousand bricks."

One word more and I pass on. I am under many obligations to the author-ess of the lines referred to, as they caused the sweet recollections of by-gone days to pass once again before my mind's eye, reviving the innocent sports of boyhood, the hoop, the kite, and above all the kind Mother that dandled me on her knee, that gently chid me for my disobedience to her reasonable and gentle laws. She still lives, and doubtless often sends an anxious wish or thought after her roving son who has from nature become a restless wanderer in a strange and uncongenial clime. * * * * I have devoted by far more space to this part of my subject than was my intention at the outset, and was I a stranger to you, an apology would be necessary; but you are aware of my inability to frame one.

A great deal is being said, by many, at the present time, in regard to School Land Warrants, and in reference to the proper course to be pursued by settlers in locating land by virtue of said warrants. There seems to be a great diversity of opinion, among those, too, who pretend to know something about the law. It is argued that land cannot be located by laying school warrants upon it, until it has been offered at public sale and rendered subject to private entry; and that if a settler shall lay a school warrant upon any of the public lands of this State, by placing it in the hands of the Register of any local land office, and receive from him a certificate of location, that the land will be sold at public sale the same as if no such location had been made. Another view that is had of the subject is, that school warrants cannot be laid upon Government lands, as school warrants are State property, and as a consequence cannot be used in the purchase of land from the U. S. Government.

The whole argument, I contend, is incorrect, and of no force. My own opinion is, that California School Land Warrants may be located upon any lands in the State, and that the proper course to be pursued by settlers, is, to ascertain that lands have been surveyed, the maps and notes made out, and approved by the General Surveyor and placed upon file in the local land office; then if the tract sought is not claimed by pre-emption, the holder of a warrant must deliver the warrant into the hands of the Register, and he will receive from under his hand a certificate of location. It will then be the duty of the Register of the land office to retain the warrant in his office for a term of six months, during which time he will ascertain whether the tract of land upon which the warrant has been located is claimed by pre-emption or not; if not, it will be sent to the General Land Office. And after this has been done, I argue that land that has been thus located will never be offered at public sale. I however may be wrong; if I am, I stand corrected, and most respectfully solicit the opinion of those learned in the law. I have partially discussed the subject, and should like to see some gentleman discuss it more fully. The subject is one of vital importance to the farmers in this district, as many of them have laid school warrants, and if they are valueless, have been sadly imposed upon. Will some gentleman possessing the desired information, generously impart the same to settlers residing in a dark corner?

Respectfully, Roving Jack.

The New Yuba and Sutter Society.

Marysville, August 4, 1855.

Col. Warren: Dear Sir—You have already been apprised of the fact, that the counties of Yuba and Sutter have united in forming an Agricultural and Horticultural Society, and it affords me great pleasure as its official organ of correspondence to address the Parent Society through you, and claim a place beneath the shadow of her wing.

It will afford you increased happiness to know that in spite of all the discouragements which have attended the Agriculturists of California thus far, that they are determined by united effort to obey the great command,

"Replenish the earth and subdue it."

It will afford me heartfelt pleasure to assure you from time to time, of the increase of interest which I feel fully assured will attend the Society, and all favors received, in the shape of Books for the diffusion of agricultural knowledge, which is much needed, or Seeds for careful experiment in culture, will be most gratefully received, and faithfully distributed.

Most respectfully, your ob't serv't,
H. W. Haskell,
Corresponding Secretary
of the Yuba and Sutter Ag. and Hort. Society.

A very curious affair is says the Sentinelle of Namur, about to occupy public attention in Belgium. In the siege of Bouvignes 1453 the Duke de Brabant made prisoner a nobleman named Legrain; but instead of taking his life as he was entitled to do, the Duke accepted a pecuniary condition of receiving all his estates and property, Legrain however possessed but little, and that at the end of four centuries it seems returns to his family. The Duke and Jacqueline of our centuries experiment next and already a great many persons representing themselves to be descendants of Legrain, are proceeding to claim the property. It is said that the affair will give rise to numerous law suits.

Practical Agriculture.

Give us special directions—more practical directions; give us regular rules for the production of the various crops, so that we can raise our annual products by them, as a carpenter builds his house by his plan. Such, we suppose, is what many people expect of a "first class" agricultural paper; and just so far as any file of weeklies or of monthlies comes short of this, just so far short it comes of its obligations. Are we right in thus describing at least the secret hopes of many readers of those useful journals, if not their actual expectations?

If so, we are perfectly willing, for one, at once and for all, directly and explicitly, to extinguish those hopes, and annihilate those expectations, so far as the expression of our views, and opinions, or expectations, may produce such a result; for we have no sort of confidence in any such plan of operations, and the louder any co-laburer should proclaim this as his definite object and expectation, just so far our own conviction of his unfitness for his place would be increased, and we should look upon him in the same degree as a charlatan. We are well aware that some of our ablest journals have now and then been so unwise as to give countenance to this notion. They have permitted themselves to go quite too far in holding up the idea that scientific farming might be reduced to such plain and practical rules, that an ignoramus might refer to them to learn what to do next, just as he would to the calendar pages of his almanac to know the day of the month. One who talks on quite a high key about this noble science, has more than once intimated that when we have advanced a little further with our model farms, we shall know just how much corn it takes to make a pound of pork; and others may have erred (and ourself among the rest) in not being sufficiently guarded on this vital point.

But why can we not reduce practical agriculture to a few simple rules, by which all farmers can be guided, and thereby become rich? One good and sufficient reason is, that the circumstances of the case, the condition of the land, the elements of which it is composed, or which may be wanting, the comparative value of the same crop at different places, or of different crops, and of manures, operating differently on different soils, or in different seasons, and the indefinite cost of fitting the soil for one or another kind of growth—all these and other particulars are so various, so changing, and so wholly unknown to the conductor of a journal, that specific instructions, requiring no skill, no science in their application, are nothing less than an absolute impossibility. Indeed, it requires but little less skill to apply than to construct the laws of agriculture, though the kind of knowledge required for the different positions of teachers and of learners may be somewhat diverse. For example: The teacher may contrive sundry important experiments, in reference to the cultivation of a given crop, and to do this wisely requires a previous fitness in the experimenter. But when all this is completed, it requires a knowledge of soils in the farmer who would successfully apply the principles taught by those experiments.

A farmer may carefully test the fattening qualities of certain kinds of feed, in relation to his own animals. But it is not certain that other animals, long accustomed to a different diet, or those of a different organization, would uniformly exhibit exactly the same phenomena under the same treatment. Again, when land commands a large price, certain kinds of cultivation will be profitable, when they would be ruinous if applied on any low priced lands. Where and can almost be had for clearing it, "high farming" is not the most productive, nor would the rules of scientific management, as generally understood, be properly applicable. Extreme cases generally form exceptions.

Having thus shown our meaning, we have only to answer affirmatively the question, what is the teacher of agricultural science to do? And we answer, he is chiefly to do with general principles, and general rules of practice in the application of which there is an absolute necessity of practical skill on the part of the learner. No book and no collection of books can be a substitute for his practical skill. They will furnish valuable aid; they will direct the attention in the right direction, and show where to look for the cause of given failures, but they cannot [illegible] cases and how to use them so as will [illegible] not infrequently, as far astray as [illegible] an *ignis fatuus*. The book may be right the application of it may be wrong.

Here it is that we [illegible] so much [illegible] and to the practical details [illegible] specific modes and processes. If we can get our [illegible] a proper conception of their wants and the [illegible] they [illegible] governed in these [illegible] duce them to be in earnest in becoming good farmers, we shall do a great work. To do anything else, with many, is utterly useless. If there is one who exhibits a practical contempt for the fundamental principles of the science of manures, for example, how foolish it is to discuss, *for his sake*, the comparative advantage of drills and sowing broadcast; of guano and poudrette, etc., etc. He will heed none of your advice; but call you a fool, and a mere book-farmer, if you advise anything contrary to his own past practices.

There are those who will be benefitted by any one solitary fact in the experience of a farmer. Being systematic in their views and their thoughts they know at once what to do with every statement of fact, properly authenticated, which is brought to their attention, and they work it into their system just as orderly and skillfully as a seamstress uses up the parts of a garment, or the thread with which she unites those parts. These details are all useful to them, and chiefly to them alone.

Probably an opinion the reverse of this would be given, at first thought, by many. They would say the mere statement is within the comprehension of the ignorant, while the scientific man alone can comprehend principles and theories. But, after reflection, we are sure that all will agree with us. Who appreciates the fact that a given medicine produced certain symptoms, in a given case, but he who understands both the medicine and the disease? To receive the fact as true, merely, without reference to the lesson it teaches, is useful to no one. Such a reception of truth is unworthy the name of knowledge.

But any child can understand a plain description of the various chemical attractions and combinations, and, in the light of such instruction, can see as at a glance, the bearing of any given fact; and they can take an interest in such teachings, and will grow wiser under such instructors.

Caliph, a Pure Arabian Horse.

Saladin, a writer in the N. Y. Spirit of the Times, gives the following in relation to this horse that was recently imported from Egypt, and remarks on Arab horses in general:

Mr. Editor: Perhaps you would confer a favor on the numerous correspondents and readers of your valuable paper by disseminating the intelligence that there is, at this time, a beautiful Arabian horse (*Caliph*), now standing, on very moderate terms, at the stable of Mr. John Case, in the town of Flemington, Huntingdon county, New Jersey, that can be reached in four hours from New York by railroad.

The history of Caliph is brief, and supported by documents that Mr. Case will exhibit cheerfully. Caliph is now five years old. A few of his colts, dropped within a week or two, are to be seen a short distance from his stand. He was presented, when a colt of eighteen months, to an infant son of the late U. S. Consul-General in Egypt, by the reigning Viceroy, selected out of his noble and pure Arab stud. Circumstances enabled his present owner to acquire the possession and transport him in 1854 to the United States.

The Arab race of horses is preserved, by being more hardily bred. In a semi-wild state, animals are known to produce without perceptible degeneracy. The race horse of England and America has degenerated, after having succeeded to an ideal perfection; but his too great length of leg, narrowness of barrel, and smallness of muscle, with the obvious defects engendered by a vicious education demonstrate that art can go no further, The vices of the ancestors begin to be more prominent than their good qualities. The laws of nature proclaim the necessity of reverting back to the original Arab stock, whose vigorous progeny will continue to carry out the species.

An Epidemic among Horses.—During the past season an unusual and severe epidemic is said to have prevailed in Vermont, New Hampshire, Maine, some of the Western States, and Canada, which has, in some cases been attended with severe losses. The Louisville Courier says:

The disease has most nearly resembled what is known as the *[illegible]* staggers in works of veterinary practice, and is attributed to the use of mouldy hay or hay from grass that are constantly overflowed, and in which a kind of [illegible] exists to a large extent, and is [illegible] from the grass. Horses that have been [illegible] during the winter, preparatory to the summer travel have been the most [illegible] attacked, and many very valuable animals have been lost. The [illegible] of good Kentucky horses [illegible] of rendering [illegible] quite [illegible] The [illegible] and [illegible] of the [illegible] and [illegible] of the [illegible] and [illegible] experiments.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, AUGUST 10, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

☞ MANUFACTURERS of every branch, Nurserymen, Seedsmen, Florists, Booksellers and Publishers, and every branch of business connected with California interests, should advertise in the CALIFORNIA FARMER, if they wish to have their business known over the country.

A WORD FOR THE CALIFORNIA FARMER.—Who among our many readers will bear us in so kindly a remembrance as to induce *one, two, three* or *five* of their neighbors to become, like them, subscribers. We wish to enlarge our list, so as to make our paper better. What subscriber will speak to us first?

Official Correspondence.

STATE AGRICULTURAL SOCIETYS' ROOMS,
Sacramento, July 25, 1855.

HON. HENRY S. FOOTE, Sacramento:

SIR: It is my pleasing duty to inform you, that the Executive Committee of the State Agricultural Society has unanimously selected you to deliver the Annual Address before the Society, at its regular Meeting and Exhibition, to be holden in this city, commencing on the 25th day of September next.

I invite your acceptance of the same, and solicit a reply at your earliest convenience.

Very respectfully, your ob't serv't
C. I. HUTCHINSON, Pres't.

SACRAMENTO, July 26, 1855,

GENERAL C. I. HUTCHINSON, President, &c., &c.;

SIR: I have had the honor to receive your note of yesterday, inviting me, in behalf of the Executive Committee of the State Agricultural Society, "to deliver the Annual Address before the regular Meeting and Exhibition of the Society, to be holden in this city, commencing the 25th day of September next." I need not say, that this call is quite unexpected, and that other engagements will make it a little inconvenient for me to comply with the wish of the Committee; but feeling a deep interest in the success of the Society, and duly appreciating the personal compliment implied in the invitation to address them upon the occasion specified, have felt it to be my duty to state that I shall experience much pleasure in executing the duty which has been thus, as I conceive, imposed on me.

I am, most cordially and truly, your
friend and obedient servant,
HENRY S. FOOTE.

THE GREAT EXHIBITION.

THE Executive of the State Agricultural Society will send out in a few days their *Large Handbills*, containing the full particulars of every plan, together with list of Premiums, and the Exhibition festival. These cards will be sent to Public Houses, Express Offices, and Post Offices, and the Government ask a kindly attention to these bills, and the co-operation of all the citizens, that this Exhibition may be worthy this State.

THE HALLS OF EXHIBITION.—We are most happy to announce that the coming Exhibition of Agriculture, Horticulture, Floriculture, and Works of Art, will be held in the Assembly and Senate Chambers of the STATE HOUSE. These magnificent Rooms will soon be made to echo with joyous notes of California industry. It is an appropriate place and can be made beautiful. Manufactures of rich wares, and goods of all kinds, Paintings, Daguerrean Art, Embroidery, &c., will find these halls magnificent show rooms.

Entrees for Premiums.

SOLANO VALLEY, July 30, 1855.

To Col. Warren, Cor. Sec. State Ag. Society:

Dear Sir: I wish to have my Peach Orchard presented to the Committee on Fruit, Orchards, &c., for the premium of the State Society.

My fruit will be ripening in about ten days from this date, and should be pleased to receive the Committee at their most convenient time.

Yours truly, WM. MCPHERSON HILL.

RUSSIAN RIVER, Mendocino, August 3, 1855.

To Cor. Sec. State Agricultural Society:

Dear Sir: We desire to enter our Cornfields for the State Society's premiums, and shall be glad to receive the Examining Committee at such time as may please them.

Yours truly, AULD & WILSON.

HUMBOLDT PRODUCTS.—The Times speaks of noticing on the wharf at Humboldt, a large amount of fresh butter, cheese, &c., which was raised on Wecott and Salt rivers, in that county. We suppose it was intended for export.

Our Politics.

PARTY is the *madman* of many, for the *gain* of a few.—SWIFT.

WE are so often inquired of, relative to our "political creed;" so often called upon to open letters containing stirring political strains, linked with agricultural lore, that we are really troubled and vexed. Our journal is devoted to agriculture and its kindred sciences, to the promotion of those interests that tend to build up the State, and to make it the happy and prosperous home of an intellectual and happy people, and from this purpose we can never be drawn, driven or bribed by any pecuniary or political consideration, or hope of gain from these sources: our highest aim being the diffusion of that information which we believe tends to permanent prosperity and happiness. For this reason we feel called upon to declare anew our purpose and plans, and to present the *political platform* of the CALIFORNIA FARMER; and from this time we trust no letter or communication will be addressed to us containing political or party matter, for it cannot be admitted into our columns, except by oversight. We respect the political feelings of all parties. We live in a free country, and a glorious one too, and while we accord the liberty to others to act as they see fit, politically, we claim the same liberty for ourselves, and that freedom we shall take by *keeping free from all partisan warfare* and political strife.

We, however, declare that we are "Know Nothing" of the old school, and give our leader—

"*I 'know nothing' which tends so much to the glory and prosperity of a country, as the improvement of its Agriculture.*"—WASHINGTON.

These are the words of the Father of our country. He who was "first in war, first in peace, and first in the hearts of his countrymen," was also first in promoting the glorious science of agriculture. His words, his works, his precepts and his example he has left as a goodly heritage, and we pray these may never be forgotten.

We, therefore, "know nothing" but agriculture and its kindred sciences, that will tend to advance the interests or glory of our country. We "know nothing" which will tend so much to allay party strife and political warfare, as social intercourse among well instructed minds, engaged in the noble employment of agriculture, and to this end we labor, and for this cause will our journal plead, and we shall look for an increase of support and favor just as rapid as these principles prevail. We mark this in the names of good and true men that are daily sending in their names, their approval and support, which is more cheering than all the fame or honor that political glory can give.

AGRICULTURAL ADDRESSES.—The Editor of this journal, in the course of his tour, being frequently called upon to labor for the advancement of Agriculture, will be most happy to aid in the formation of Societies and in familiar addresses, whenever good can be accomplished to the cause. Col. Warren will, by invitation of the friends of Agriculture, deliver an address in the Church of Rev. Mr. Briggs, at Marysville, on Sunday evening next, at 4 1-2 o'clock. Subject—"The moral influences of Agriculture, and the blessings it confers upon Home." On Monday Col. W. will be present at the meeting of the County Society, same city, at City Hall. Every friend of Agriculture should now be ready to do all in his power to encourage the interests of Agriculture, as they are the foundations of all prosperity.

YUBA COUNTY SOCIETY.—It will be seen that the members of the Yuba County Society have taken active steps to make it an efficient one. Another meeting is to be held at the City Hall, Marysville, on Monday evening, 13th inst., for the purpose of making a more complete organization, establishing committees and choosing delegates to the State Agricultural Fair, which is to take place in September next. It will be seen by their notice that the Rev. Mr. Briggs, of Marysville, will deliver an address on that evening before the Society. The reverend gentleman is not only a lover of the beautiful in nature, but he is well qualified to teach, by a practical knowledge of the science. It is hoped a full attendance will give the Society a new impetus.

AGRICULTRAL ORATION.—By the correspondence in our columns to-day, it will be gratifying to see that Ex-Governor Foote has kindly consented to deliver the Annual Oration before the State Society. It were needless for us to say what may be expected, for the announcement of the orator's name will do this.

THE Artesian Well being dug for the city of San Jose, has reached a depth of 235 feet and discharges 75 gallons of water per minute.

California Industry.

THERE are now produced from the soil, raised and manufactured in this State, Grain and Flour enough to supply the State. Salt enough, not only to supply California, but resources sufficient for the whole Union, from material already prepared for use. Our dairies supply hundreds of tons, per month, of the best Butter and Cheese. Beef, Pork, Lard and Hams are now articles of large transactions, and will soon be had in quantities for shipment. Soap is manufactured in large quantities. Candles, also, of excellent quality. Oil manufactories are established, and the material is now furnished from whale ships fitted out from our own ports. Starch manufactories are in successful operation, and the character of the article made ranks high in the market. Preserves of many kinds, and some Spices are prepared. Confectioneries and all the fancy works are of home products. Implements of Husbandry, such as appertain to the farm, to a great extent are the products of California. Iron Works, Machinery of various kinds, from the most gigantic to the most minute, are now the result of California enterprise; also Brick enough to supply the State, and Granite and Marble of the very best finest quality. Slate is being quarried, and recent discoveries give proof that soon we shall be fully supplied from our own soil.

No State in the Union can boast of greater mechanical skill, or the genius needed for manufactures of every description, than California. Let but the proper sympathy and just attention be given to encourage "home manufactures;" let our citizens awake to this great matter, and California will soon take high rank. The coming Exhibition of the *products and resources of California* will give an evidence not to be mistaken.

The City of Marysville.

IN the years past we well remember the *apparent* rivalry that existed between Marysville and Sacramento; high words, hard words, went between city and city—but it was in the "newspapers"; it was like a political warfare; railroads, trade, steamboats, &c., all influenced this kind of —game; it was *words*, and we are very happy to see and know that even words have passed away and nothing but the kindliest feelings of fraternity exist.

It is some two years or more since we were in Marysville, until our present visit, and we find that Marysville, like Sacramento, bears the marks of progress and permanency. Both are goodly cities, and destined to be "great marts" of a prosperous trade.

Marysville is indeed a prosperous and beautiful city, and is daily becoming more so. Improvements of a solid and permanent kind are being made; her citizens, her merchants, her professional men, "grow with her growth and strengthen with her strength." They are identified with her stability and character; they love her, for it is their Home; they will defend her, provide for her, build her up as a city of palaces—for she is like a pet child to them, and their affection is fastened to her. The people of Marysville love their city, and well they may. The sun may pour down his rays ever so hot, the people cling to their favorite, their home, with an affection equally warm and glowing; and it is this fidelity that has built up Marysville, and will build up any city. The trials that the citizens have passed through are great, but they have nobly borne them; and as we remembered years gone by, and called to mind the names familiar, that we once saw over the *tent* or the shanty, down on the banks of the Yuba, we to day, as we walk through the *raised city*, as we look up to the piles of brick and stone, we there read the names familiar to us in by-gone days, names as permanent with the prosperity of the city as the granite that bears them. We could not help noting the names of—J. C. Fall, of Fall, Eckman & Co.; Wm. Hawley & Co., of Eaton, Babb, & Hawley; Treadwell & Co.; Garst & Galloway; Harrington & Hazeltine; Crafts, Farish & Co., of Farish & Adams; Decker & Co.; Jewett, Scott, and Valentine; Ireland & Co.; Cheesman & Co.; Eaton, Gibson & Co. There are many others that we know, old and permanent citizens, merchants—these however will show that merchants who are firm and true, cannot long remain beneath the cloud of misfortune produced by calamity. In passing through these mercantile houses we were gratified to know, by what we saw, that their prosperity was not in appearance only—there was real business, profitable business—the loaded steamers coming to the levee, and the loaded teams and pack trains going from the city, told the story. We rejoice at this prosperity, in our hearts, and we do hope our mercantile friends will take a new interest to aid and build up the country—for when that is prosperous, then the merchant, manufacturer, and mechanic will be so too, and permanently.

Weekly account of Fruits Exhibited at the Society's Rooms.

FROM this time until the Annual Fair, a Committee will attend at the Rooms, from day to day, to examine and record succinctly such data as will give to each exhibitor the same chance for a premium at the Fair, as though his fruit was there and then exhibited.

The following is the data taken for the last week:

One basket containing nine Peaches, free stone, mammoth size, and splendid fruit: from the garden of J. R. Johnston, jr., Esq. Three "Morris White," largest measurement, short diameter, eight and a quarter inches; long diameter, eight and three-quarter inches. Three "Melocoton," largest, short diameter, eight and a-half inches; long diameter, eight and three quarter inches. Three "Crawford's Rare Ripe," short diameter, eight and a-half inches; long diameter, eight and three-quarter inches. Two of the largest weighed one pound.

One basket containing nine Peaches, free stone, "Crawford's Rare Ripe:" from the garden of J. R. Johnston, jr., Esq. This fruit is highly creditable to the grower. Specimens a shade smaller than the above.

One basket containing four specimens, (we suppose them to be "Red Heath,") measurement of the largest, short diameter, eight inches; long diameter, eight inches. Two of the largest weighed three-quarters of a pound. This fine fruit is from the garden of A. Runyon, Esq.

One basket containing three varieties of Apricots, from the extensive gardens of Kuhlau & Co., near the Fort. Measurement of the largest, short diameter, six inches; long diameter, seven inches —weight four ounces. This is truly splendid fruit.

One basket containing two varieties of early Grapes, white and purple. These specimens are remarkably fine for the season and highly creditable to the grower. They are from the extensive gardens of John Woolfskill, Esq., on the Putah.

Dr. Brown kindly sends us the following in relation to the peaches exhibited by him, and briefly referred to last week by us:

EDITORS FARMER: Believing that it might not be wholly uninteresting to your numerous readers, I subjoin an account of the several trees, from which the peaches were obtained, on exhibition at the rooms of the Agricultural Society on the 29th of July:

No. 1—*Salmon Heath.*—Three specimens, largest, 10 inches short diameter, 10 1-4 inches long diameter; smallest, 9 inches short diameter, 9 and a fraction inches long diameter. Tree, three years old from the pit; circumference of but at the ground 14 3-4 inches, at the first fork 15 inches, and 12 inches from the ground to the forks. The forks consist of two limbs, one tending to the east, the other to the west; the former 9 1-2 inches in circumference, the latter 10 inches; these soon fork again, and compose about fifty limbs. Hight 17 feet 7 inches, periphery of the branches 58 feet. The fruit are freestone, and begin to ripen about the 15th of July. Last year the first crop was produced, and which was small; the crop this year about 3 1-2 bushels.

No. 2—*Blush Heath* and *Brown's Seedling*—About thirty-one months old from the pit. Four specimens of the seedling fruit; largest 9 inches short diameter, long diameter 9 and a fraction inches. Three specimens of the Blush Heath, dimensions mislaid. Circumference of but, at the ground 14 3-4 inches, at the forks 12 3-4 inches. Hight from the ground to forks 2 feet 10 inches; they comprise three branches, which tend to the east, west, and north; the two former are the Seedling, and the latter, being in the bifurcation, is the bud, "Blush Heath." The east limb is in circumference 8 1-2 inches, the west branch is 8 3-4 inches. This fine seedling is derived from a White Heath pit. The bud branch is 9 inches in circumference; this branch comprises over 50 limbs. Hight 19 feet; periphery of branches 65 feet. This tree bore a small crop last year; crop this year, supposed to be about four bushels; the fruit are freestone, and uniformly large, and begin to ripen about the 1st of August.

No. 3—*Bud, Salmon Heath.*—Two specimens measure mislaid, fruit large size. Hight of tree, 10 feet 4 inches; circumference at the ground 5 inches, at the first fork 4 inches, from ground to the fork 3 feet 10 inches; periphery of branches

19 feet 7 inches. Age from the pit about 18 months. Crop, 63 mammoth peaches, matured.

No. 4—*Bud, Salmon Heath.*—Two specimens, measure mislaid, fruit large size. Hight of tree 8 feet; circumference at the ground 3 inches, at the fork 2 1-2 inches; from the ground to fork 3 feet 3 inches; periphery of branches 18 feet. Crop, 57 mammoth peaches. Age from the pit about 16 months. I might add more examples, but this will suffice, to encourage fruit growers and amateurs to devote a brief space to Pomona.

In conclusion I may add, that the fruit disposed of from No. 1 amounts in the aggregate to $115, at $4 to $5 per dozen, thereby enabling the retailer to realize a handsome profit.

VERNON HALL, H street, Sacramento. B. B. B.

Flouring Mills at Marysville.

THE people of Yuba county are actively preparing to do their own work in the way of manufacturing flour.

We have examined the "Buckeye Mill," owned by Messrs. Teegarden and Foster. This mill is now undergoing repairs, and much improvement will be made in every feature of the work. It has three run of stones, capable of turning out 100 barrels per day. Smith's smut cleaner is used at this mill; this cleaner revolves 1000 times per minute. The grain is raised to the roof of the building to *winnow*, thence down to *smut*, up again for a second winnowing, thence to a damper, and then (when sufficiently swelled) it passes to the stones. When first ground, all the flour that passes the perfect bolting cloth is bagged; that which passes to the second bolting cloth is again returned and ground over, until it is perfect enough to pass No. 1. The mill is moved by steam power; a very fine engine does the work grandly, and at the small consumption of only three cords of wood per day.

THE QUEEN CITY MILL.—Here, too, energy, enterprise mark the place. Messrs. Soule, Bordwell & Co., are the proprietors of this mill, and their prospect for a fine business is flattering. They have now two large run of stones of four feet, and one small stone for small grains. The mill can turn out 100 barrels per day; 250 quarter sacks, with other fancy kinds, can be made in a day. They are preparing now for grinding buckwheat, which is much wanted. This mill uses Smith's smut-mill. They are now laying machinery and preparing to excel in every department.

FEATHER RIVER MILL.—This is a new mill, in a new location, near the toll-bridge; it was the large saw mill, and is built very substantial. It will soon start with two run of stones, to which two more will be added, when 150 barrels per day will be turned out. They use Pease, Jr.'s, smut-mill, this being the second one of the kind in the country. The mill is carried by two steam engines of 30 horse-power each, and will be of the best construction and finish, intending to turn out A No. 1 flour. F. Cunningham, is the proprietor.

SPECIAL NOTICES.—We ask our readers to examine the sketch from Sierra Valley, by "Alice," in this week's issue. We republish this, believing it will be acceptable to our readers. There is an easy grace in her style that wins, and we feel assured our readers will be happy to know that "Alice" is to be a constant contributor to our columns.

"Rural Tom" writes boldly, and "Betty Martin" will no doubt carefully criticise her admirer. We may expect an answer soon.

"Roving Jack" is ever welcome. We shall give his requests early attention.

The gratifying letter of our co-laborer, the Corresponding Secretary of Yuba County Society, shall receive early attention and his requests complied with.

"Agricola," No. 11, and "'49" were both duly duly received.

We ask the earnest and kind thoughts of all readers to the special cards of the Executive officers of the State Society, in order that they may be enabled to advance the State Exhibition.

Having been absent a considerable time for the last few weeks, we beg indulgence for any omission of duty to our friends and readers, and for errors that may have escaped notice in our paper.

GRASSHOPPER TRAPS.—In our rides in the grasshopper country, we saw *thousands* of the deep holes which had been dug in the earth by the Indians, to entrap their luxurious food. These holes contain about a bushel and a half and we believe we saw holes enough in Yuba Butte and Sutter counties, to have collected fifty thousand bushels of grasshoppers. The Indians will grow fat this winter.

Another Murder.

"Oh, thou invisible spirit of wine, if thou hast no name to be known by, let us call thee—devil!"

Another victim has given his addition to swell the awful *cortege* of mortality; led on by the inflexible demon, drunkenness. The evidence adduced by the coroner's inquest, was that one John Van Arnam met his death from wounds given by some sharp instrument, in the hands of some person unknown. From outside information, gleaned from reliable authority, your reporter learns that the circumstances connected with the affray, which resulted in the death of the unfortunate man, as far as known, were substantially these: He was first seen running from a house in Virgin Alley, with his hand to his side, exclaiming "Some one has struck me with a clapboard!" A stream of blood issuing from his side, and his face horribly mutilated, immediately attracted the attention of passers-by, by whom he was removed to the Western House, where he died the next day. From the few words which escaped him prior to dissolution, it appears that the author of the crime was a Mexican, with curly hair and whiskers; but nothing was said of the provocation given, which induced a vengeance so summary and fatal. The supposition is, judging from deceased's character, that in a fit of drunken frenzy, he assailed some hot-blooded denizen of the quarter where it occurred, from whom he received a death wound.—*Marysville Herald.*

We saw the mangled remains of the unfortunate man, as he was about to be placed in the coffin and borne away to his last resting place. Terrible as was his death, unhappy as must have been the life he thus led, it is not for us to censure or condemn him now. He has gone to his final account; he has been suddenly called where every act of his life will be reviewed; and where a merciful and just judge, from whom there is no appeal, would pass the final sentence. The mortal form was before us, soon to pass to the grave. The spirit had fled and returned to Him who gave it; and as we gazed we could only think where the blow would fall heaviest. A death like this falls heaviest upon the living, and although a heartless world may be glad to hurry the unfortunate victims of intemperance from the earth, they forget that the living have affections not yet deadened by the poisonous cup, and they it is that suffer most keenly. For as the victim becomes more and more lost to feeling and affection, so the innocent suffer still the more keenly.

As we stood gazing upon this new victim of outraged law, and looked forward and reflected who would mourn his fall, or come to follow him to his grave and weep over it, we remembered he would soon go to that bourne alone, that those who would feel the blow the keenest were far, far away. We gave the tribute of a tear as we passed from the shrouded corse, and remembered he had sisters and a mother, where the barbed javelin would strike home the poisonous wound. We could only say—

Teach me to feel another's woe,
To hide the fault I see;
That mercy I to others show,
That mercy show to me."

NEW BANKING HOUSE.—Macy, Low & Co.—a firm composed of our friends, Chas. B. Macy, C. L. Low and F. F. Low—have just opened a new and extensive banking house on the corner of First and High streets, in the building formerly employed as the Express Office of Adams & Co. The weight of solid capital and the high financial capabilities enlisted in this new banking establishment, must secure to it a firm and prosperous existence.—*Marysville Herald.*

We are happy to copy the above notice, and to add, that having visited this new banking house we know it is all that is represented. In the senior partner we recognize an early pioneer of California. Capt. Macy was one of the earliest commanders upon the Sacramento. We recollect our first trip up-river in '49 was with Capt. M., and we then received much kindness, which we now take pleasure to remember, by wishing him and his house complete success in their enteprise.

THERE is also another new house, Messrs. Wilkinson & Co., gentlemen of experience and means, intending to do a legitimate banking business.

PRINCE'S PROTEAN FOUNTAIN PEN.—We take great pleasure in recommending this new and valuable invention to all who do not wish to be troubled with constant recurrence to an inkstand to be annoyed with inky fingers. It can be used for hours without replenishing. The point of the pen is gold, and the holder India Rubber made very light and graceful, and convenient to carry in the pocket. It can easily be filled when exhausted, and will write over two or three quires of paper without filling. Its structure is perfectly simple and not liable to get out of order, and is one of the most valuable inventions of the age. No reporter will be without it after becoming acquainted with its great [illegible]—

"Let [illegible]
And [illegible]"

COL. BIOPY'S RANCH.—This large and fine Ranch is situated upon the Yuba river, and contains about 5000 acres—a portion of it rich mineral land, now being cut up in search of gold. We were courteously received by Col. B., and examined his crops of grain. We now present the amount of his crops of the last and present years: In 1854 Col. B. planted 150 acres of his best land to grain, and the amount raised was as follows: of barley 3400 bushels, oats 1400 bushels, wheat 800 busels. The present year's crop, 1855, is as follows: 25 acres volunteer, 125 acres cultivated, and the whole crop is only 1533 bushels, making a difference of two-thirds crop, or over four thousand bushels of grain. This heavy difference arises from rust, smut, and the grasshopper, and we find many farms that are losing heavily. We have in preparation schedules of the crops of Yuba and Sutter counties, which we hope to give in full. This is the reason why we do not particularize more now.

We visited some thirty farms high up on the Yuba, nearly all changing hands, and their appearance was melancholy in many cases—no improvement, all waiting to know *who owns the land.* We wish we could be assured that some measure could be devised by which that unhappy question could be settled. The whole country suffers.

A COMPLETE AGRICULTURAL WAREHOUSE.—Among the many fine warehouses that add to the credit and prosperity of our principal cities, we must ever revert to those which take a prominence in agricultural interests. Among those we know there are none that rank higher than those of Treadwell & Co., of San Francisco and Marysville. We found much of interest and pleasure, during our visit to Yuba county, in examining their warehouse at Marysville. The end and aim of the proprietors of both these houses is to have everything complete, from the simplest pruning knife to the ten-horse power thresher. Everything that is to be considered useful or valuable in any department of agriculture, or the ware needed for the mechanic that constructs our houses, can always be found at Treadwell & Co. It is interesting for any one to go through and examine these extensive warehouses.

HOW TO DIG SWEET POTATOES.—A great error, as well as loss, annually occurs to farmers, from a want of knowledge on the most simple subjects. The sweet potato should not be harvested like other potatoes, but when about ripe, the side of the hill should be opened and those that are full size should be carefully taken out and the earth covered over the smaller ones again. By this means you may have two, three, and sometimes four crops from the same vine. This plan has been tried in the Islands successfully, and we ask cultivators to note by trials the results in this country. We earnestly ask attention to this, as of moment to California.

NEW MARKET HOUSE IN SACRAMENTO.—The New City Market House has just been opened, and it is a credit to our city. It is situated on K street, near Fourth—a fine brick edifice with arched entrance. We passed through the market and were pleased to see so much at so early a day. We noticed a well filled stall of fruits and vegetables, from the gardens of A. P. Smith, Esq. We saw the very handsome filled stall of E. J. Bosler & Co., which is undoubtedly the finest stall in the market, and speaks much for his taste and skill, and what is more, his choice meats are all spoken for at an early hour. It is to be hoped that the public will visit the market and bestow a liberal patronage upon it.

CALIFORNIA BROOMS.—The great broom-corn field upon the land of John A. Paxton, Esq., on the Yuba, is now nearly harvested, and Messrs. Chase & Taylor, who have cultivated the "broom," are now sending their "broom's" to market. As "a new broom sweeps clean," we call the attention of families to the fact that they may *encourage California manufactures.* Chase & Taylor, Marysville, and Lusk & Co. of Sacramento city, are now in the market with their products. Be sure and give preference to our own products.

LOSS OF GRAIN.—We have just received intelligence of a reliable character that in Mendocino county there will not be fifty acres of grain harvested; and Sonora is very bad—not one-tenth crop. Bodego is also worthless, and Petaluma of like character. Yolo county is busy as the crops are being harvested and cleaned.

The U[illegible] fish [illegible] are sold [illegible] of eating [illegible] the river, where they are daily dying off by the fall of the river.

DESTRUCTIVE FIRE—HORSES BURNED.—We visited the ruins of the stables at Marysville, which were burned on Tuesday evening last. We were awakened in the night by the cry of fire, and we looked from our window and saw the bright light. Having learned the terrible disaster to life of so many noble animals, we visited the ruins, and never but once before did we behold so terrible a sight. Here were the carcases of twenty-nine horses and mules, some very large and valuable animals. We noticed six very large mules huddled together, their heads crossing one another, as they died in their agony. We were told by those who heard it, that the agonized yelling of the animals was like the blast of a trumpet. One young man lost by this fire, two six-mule teams of much value, that he had earned by hard working. He had just completed the payments for them as they were burned. Others lost heavily, and not only animals, but hay, grain, wagoos, harness, were burned. There were forty-three horses and mules in the stable; only fourteen were saved. The fire was undoubtedly the work of an incendiary, as the man that first saw it reports seeing a fire in the hay-mow about the size of a bushel basket, and he tried hard to conquer it, but having little or no water, the fire triumphed. We hope the incendiary may be soon caught, and his reward be commensurate with the evil intended. We cannot but remember the contrast between '49–'50 and the present time. Then, crime was punished, and that *promptly.* Now, the criminal not only escapes, but becomes bolder by believing he can always escape. We do not advocate lynch law, but a law that will *deter men from crime;* for it is not the *terror* of the penalty that criminals fear, so much as the *certainty* that that penalty will be inflicted as soon as they are detected and proved guilty. When this certainty is felt, men will flee from crime—*never till then.*

CALIFORNIA HOTELS.—*To our friends who intend to visit California.*—As journalists, we feel it a duty to speak a word occasionally for the benefit of those who may be called to our shores and are not fully advised of the BEST HOTELS. We shall therefore, from time to time, give a word or two on these matters.

San Francisco Hotels, No. 1.
The Rassette, by J. Rassette;
The Oriental, by Capt. Waggstaff;
Wilson's Exchange, by Easterbrook;
The International, by Peck & Fisher;
The St. Nicholas, by Armstrong & Ridgway.

Sacramento Hotels. No. 1.
The Orleans, by Hardenburg & Corse;
The Jones Hotel, by Mrs. Clark;
The Merchants', by Barney & Ladd;
The Dawson Hotel, by Dawson.

Marysville Hotels, No. 1.
The Western Hotel, Murray's;
The Merchants' Hotel, Churchill & Co.

The above we know to be all first class Hotels, and worthy confidence and support. There are others of excellence, but we do not know them so well. Those who may design to visit California will ever be satisfied to drive to either of these, and they will feel at home.

WHALE FISHING AT HUMBOLDT BAY.—The Times of the 18th ult. says: The steamer Mary Ann captured another whale on Tuesday. They are to be seen in immense numbers off the harbor and the crew of the steamer have no trouble in finding them. Whaling is here a mere pastime, the crew being with their families at night and fishing by day. The whale caught last week yielded twenty-eight barrels of clear oil. It is of that variety known to whalers as the "humpback." The "right whale" will be on the coast in September. The oil is tried out on shore at Humboldt Point. The business will nothing be more remunerative than any other investment on the Bay.

CHINESE THEATRE.—The Auburn Herald says: "John" has become so numerous on China Hill that he has erected himself a theatre and every night is made hideous with the [illegible] gongs, castinets, and other horrible musical instruments which are used in the performances. The music of a dozen of such instruments is [illegible] emanating from that Celestial theatre.

THE GRAIN MARKET.—Wheat remains [illegible] Barley and Oats are [illegible]. We do not [illegible] market reports this week, as the Agricultural Ooard for the Fair [illegible] Wednesday next. We [illegible] to the [illegible] If the [illegible] of [illegible] the [illegible] If [illegible] [illegible] of the [illegible]

State Agricultural Society,

OFFICIAL NOTICES.

Circular.

The Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. Hutchinson, President.

O. C. Wheeler, Rec. Sec.

Sacramento, June 23d, 1855.

Agricultural Visiting Committee.

At a meeting of the Executive Committee of the State Agricultural Society, held this day, Gen. C. I. Hutchinson of Sacramento, Rev. A. H. Myers of Alameda, Hon. Sherman Day of Santa Clara, Hon. W. W. Stow of Santa Cruz, and Gen. Allen of Yuba, were elected a Committee for the examination of Farms, Orchards, Vineyards, Nurseries, &c., which may be entered for premiums at the ensuing Fair. Although the time for such entry has expired, yet the Committee is instructed to receive propositions for such entry until the 15th August, being *bound*, of course, to visit only those which may be within their range. Special pains, however, will be taken to answer all special requests. O. C. Wheeler, R. Sec.

State Agricultural Society's Rooms, July 27, 1855.

A Call

To every organized County Agricultural Society.

I am instructed by the Executive Committee of the State Agricultural Society, to ask the earnest co-operation of every County organization, and to ask of the Corresponding Secretary of each such information of their several Societies as will make known to the Executive how much their Counties will do to further the interests of the Exhibition—what products, what stock and what manufactures may be expected from their several counties; and to solicit an active co-operation in this great work. It is also very desirable that special delegations should be appointed to attend the Fair and to act in convention, and thus aid in promoting and advancing all the great and important interests involved.

The Secretaries or other officers of each County are particularly desired to reply to the call at the earliest moment.

Per order of Executive Committee.

James L. L. F. Waraen,
Corres. Sec. State Agricultural Society.

Free Transportation to the State Fair.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co. have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanying the same.

Every thing of like liberality from our citizens in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. Hutchinson, President.

Sacramento, July 5th., 1855.

Members to the State Society.—One of the plans to promote the usefulness of the State Society, is to aid them by the value of membership, and this is one of the sure ways to prove your interest and your wish for its success. Gentlemen who desire to give this evidence of their wishes, can call at the Rooms of the Society on Fourth street, between J and K, or address us, inclosing $10 by mail. This amount entitles [illegible] to all the privileges of a member, and they [illegible] their immediate families to an admittance to the Society's Exhibitions. We hope many will come forward, voluntarily, and enroll themselves.

Horticultural Department.

Grafting the Chestnut, etc.

From an interesting letter published in the Cincinnati Gazette, from Mr. Sheldon I. Kellogg, to the Wine Growers' Association, dated Bordeaux, France, we make the following extract. Mr. Kellogg says:

"I have been much surprised in seeing the great dependence the poorer classes make upon the large chestnut for their daily food. It is cultivated in this neighborhood in great abundance for this purpose. All classes use them more or less; the rich having them daily brought upon their tables as a dessert, either boiled or roasted. It is often made into soup, which is highly esteemed. They are cooked in a multitude of ways, and I know nothing of a farinaceous nature which is so very delicate and nourishing.

"The marron, or large chestnut, is the produce of the wild chestnut after being engrafted. The wild tree, at three or four years of age is cut square off. The stump is then split twice. The slits intersect at right angles at the centre of the stump. There is then inserted a good sized branch of the same tree in section of the splits, making four branches in each stump. Care is always taken to make the bark of the branches, and the bark of the stump join each other as closely as possible. The graft is then surrounded with clay and moss, to prevent the outflow of the sap, and it scarcely ever fails of success. The period celebrated in this climate for this operation is the month of February. The produce of this graft, is usually a fine, large, beautifully colored marron, about the size of our buckeyes. They are much more delicate in texture and flavor than our wild chestnut. They are never eaten without being cooked. The tree is a very beautiful one, being, though not so high as ours, much more dense in foliage, and shading a larger space of ground."

Will not some of our horticulturists profit by the information given by Mr. Kellogg, not only as it regards the chestnut tree, but also by experimenting on grafting fruit trees generally, in a similar manner to the one described? We are unable to see why a like favorable result will not follow the grafting of the apple, the peach or pear, or any other fruit tree. We think the superiority of the chestnut, as stated by Mr. K., is owing to the tree being made to spread, by its peculiar grafting, more than the ordinary tree, without growing so high, and thereby causing the juices, for the formation of the fruit, to flow to their termination more quickly and fully, than when they have to pass through a long trunk. Besides, we think, that any species of tree which is made to spread its branches wider, and further, from the centre of the tree, will also extend its roots in a corresponding ratio, and thereby receive a proportionably greater amount of nourishment from the earth, for the production of its fruit; and that consequently, the size of the fruit will be increased, and its quality improved.

We are taught in the writings of the church that a tree corresponds to man, as to will and understanding. And in the degree that we become acquainted with botanical science we are enabled to see a beautiful correspondence as to all things in the various uses of a tree, to things in man. We see that the trunk and branches of a tree correspond, as to use, with the understanding; and the roots in like manner to the will. And this correspondence to be perfect must enter into the whole organization and life of the tree. There must be a perfect adaptedness of the roots in their organization and structure to the performance of of all the uses required of them by the trunk and branches, that life may flow through the former into the latter, and both unite in the production of fruits. And hence we conclude that when a new impetus is given to a tree, by which the spreading of its branches is increased, and a facility thereby given for greater productiveness, that a greater extention and spreading of the roots will consequently take place.

To Preserve a Bouquet.—A florist of many years' experience gives the following receipt for preserving bouquets for an indefinite period, which may be useful to our readers: "When you receive a bouquet, sprinkle it lightly with fresh water. Then put it into a vessel containing some soapsuds; this will nutrify the roots, and keep the flowers bright as new. Take the bouquet out of the suds every morning, and lay it sideways (the stock entering first) into clean water; keep it there a minute or two, then take it out, and sprinkle the flowers lightly, by the hand, with water. Replace it in the soapsuds, and it will bloom as fresh as when first gathered. The soapsuds need changing every three or four days. By observing these rules, a bouquet can be kept bright and beautiful for at least a month, and will last still longer in a very passable state; but attention to the fair, but frail creatures, as directed above, must be strictly observed, or all will perish."

One Receipt for Happiness.—Preserve the privacies of your house, married state, and heart, from father, mother, sister, brother, aunt, and all the world. You two, with God's help build your own quiet world; every third or fourth one whom you draw into it with you, will form a party, and stand between you two. That should never be. Promise this to each other. Renew the vows at each temptation. You will find your account in it. Your souls will grow, as it were, together, and at last they will become as one. Ah, if many a young pair had, on their wedding day, known this secret, how many marriages were happier than—alas!—they are!

Ladies' Department.

[From the Sierra Citizen of Nov. 18, 1854.]

Sketches from Sierra Valley.

BY ALICE.

To-morrow I'm to bid good bye to our ingle nook, lock up the cabin, nail shingles across the window, and carry away the household gods from the dominions of the Storm King. The other day a flock of deer came down the hill behind our cabin, stopped at the brook, and seemed to be holding a council whether to leave their summer haunts, or to remain and be hunted into the snow banks by their enemies the wolves. They were quite close to our cabin, and I fancied I could see them turn their eyes apprehensively towards the snow hills, as though they had heard the storm-spirit marshalling its forces in the glen. At last, one old fellow with great wide antlers, probably the patriarch of the tribe, started down the branch, and the whole flock soon disappeared among the trees.

I have already passed one winter here, shut out from the world, surrounded by great snow drifts, with no outlet save towards the sky, and oh! how dreary were those long chilly months that I watched for the return of my husband, who had been storm-stayed; and how anxiously I marked the daily decrease of our little stock of provisions! I shuddered when the rude blast shook my dwelling and swayed the pine trees to and fro on the hill. Then I thought of the freezing traveler in the Alps, turning his glassy eyes heavenward, and trying to brush away the film of death. Then I imagined that my husband might be lost in the snow, and almost fancied I could hear the wolves fighting at their dreadful carnival. How earnestly I invoked sleep, the brother of death! then crept to the window to look for the well known form coming down the trail. But the clouds were gone—the wind stilled, and the brow of night sparkling with gems, and then I repeated to myself the lines I learned at school,

> "Aye gloriously thou standest there,
> Beautiful, boundless firmanent,
> That swelling wide o'er earth and air,
> And round the horizon bent!
> With thy bright vault and saphire wall
> Dost overhang and shelter all."

You need not ask me why we built our hut in this frozen valley? You might as well ask the emigrant who shoulders his ax and rifle and drives his team into the deep forest, why he has left the paternal roof to dispute the soil with the savage. After all he is in pursuit of happiness; and though his children's feet tread painfully on a foreign shore, though the clouds of misfortune follow in his wake, he thinks that in the quiet woods, with a log cabin that he can call his own, with its rude table and stools, he may find that rest and quiet which he has sought for elsewhere in vain.

I do not think that the young wife can fulfil a higher destiny than to bid adieu to her early home and all she loved, save one, and to follow him into the untrodden wilderness. How our hearts warm when we listen to the stories of our grandmothers, who lived in the little stockade forts along the Ohio! Many a time, when a little girl, I sat cowering in the corner, treasuring up every word of the Indian story told by the palsied old lady who lived the other side of the creek. Then slipping away to bed I covered up my head and dreamed about Indians chasing the settlers from the clearing, and burning their cabins, until I awoke terrified, and heard nothing but the barking of the house-dog and the soft breathing of my sweet little sister who had laid her hand upon my cheek. I little thought then that I should ever journey so far toward the Occident, or sit by an Artemesia fire, watching the lightning play round the crags of the Rocky Mountains, or listen to the ringing of the settlers' ax in the Sierra Nevada.

A glorious life is the pioneer's—so full of wild adventure; sometimes gloomy enough, but then the clouds float away and let down a flood of sunshine. The emigrant's wife must "suffer and be strong," tread lightly life's pathway, skip over the thorns and briars, and not sit crying and lamenting her hard fate, while her husband is swinging the ax in the forest, or following the plow. So did not the emigrant mothers of the West, when plying the spinning-wheel, or preparing the evening meal for the laborers when they returned tired from the clearing. What cared they for the caprices of fortune? Their children ran whooping the woods as joyous and independent as though they belonged to some feudal castle.

But, there is one great objection to life in the mountains of California; the Sabbath day is desecrated, and the teachings of religion, which we have all been taught to respect, are only spoken of as something with which people have nothing to do. This might be reasonable enough if California were beyond the flight of the Angel of Death. But now and then we see a dozen or two people slowly ascending the hill from the river, collecting round a new made grave, taking off their hats and acknowledging the existence of a God. Some one sets up a board "in memory of ——," it may be the widow's son! Yes, heap up the fresh earth and hurry away, and ask not how or why he died. The story is a melancholy one of guilt and shame—youth, hope, dissipation, dispair and death! Let the silence that broods over his grave by the way-side protect his memory, and when the expressman brings the next letter to his cabin and finds it empty, let him return it, not with the intelligence that the owner fills a suicide's grave, but that they

> Buried him deep in the infinite sea,
> And made him a limitless grave.

The stranger coming into some of our mining towns might suppose that there was no Hereafter, no God, no death, in the gold mines; and yet the miners are not a community of infidels. Now and then one hears some blasphemous wretch reviling the name of his Creator, and ridiculing the story of the Cross, but it is revolting to the better feelings that are hidden in the hearts of the apparently reckless, and they secretly despise the miserable blasphemer.

Snow has already fallen on the hills that I have to pass to-morrow, and they look as cold and bleak as Spitzbergen. * * * *

Well, we have crossed the snowy hills that I looked at with apprehension two days ago. I could not help looking back with regret at the rude log hut where I had passed so many pleasant, as well as gloomy days. Nothing looks so melancholy to me as the smoke curling up sluggishly from the chimney after the house has been abandoned, and I felt half inclined to go back and rekindle the fire that I had raked up on the hearth. Last night we slept in the snow. A roaring fire was built up against a big log; fir branches were spread down, and our little party *corraled* in front, and passed the night quite comfortably, considering the accommodations.

About midnight we were awakened by a solo from a California lion, got up probably for his own amusement exclusively, or it may be on account of the great scarcity of provisions in his territory. Few persons have passed the night high up in the Sierras without hearing the discordant howling of these animals; and few ever heard the sound without making a critical examination of the nearest tree. The sound is an harmonious blending of the bellowing of a young ox and the yelling of a panther. At first it seemed to me hideous beyond description, but I soon got used to it, and had about as soon hear it now, as the spasmodic howling of a politician half seas over. Some months ago I had the pleasure of hearing a duett performed by a California Lion and a large wolf, one on either side of the creek. The wolf was a very respectable amateur vocalist, but he gave up in despair when his antagonist became thoroughly warmed up, and "echo con'd the doolfu' tale."

Here endeth the "Sketches from Sierra Valley," and I suppose you and your readers are heartily glad of it. When winter's reign is over and the other denizens of the wood return to their old haunts, may be I may return to mine, where

> Wi' ema' to sell and less to buy,
> Aboon distress, below envy,
> O wha' would leave this humble state,
> For a' the pride of a' the great?
> Can they the peace and pleasure feel,
> Of Bessy at her spinning wheel?

The Duties of a Guest.

That the duties of a hostess are many and onerous, no one attempts to dispute. Guests have a way of thinking that none are owing in return. This being the season of innumerable country visitations, which fall with especial weight upon a hostess so situated, let us see what Mrs. Manners, the highest authority in these matters, thinks should be the duty of the visitor:

"To accommodate yourself to the habits and rules of the family, in regard to hours of rising or retiring, and particularly the hours for meals, is the first duty of a guest. Inform yourself as soon as possible when the meals occur—whether there will be a dressing-bell—at what time they meet for prayers, and thus become acquainted with all the family regulations. *It is always the better way for a family to adhere strictly to all their usual habits;* it is a much simpler matter for one to learn to conform to those than for half a dozen to be thrown out of a routine, which may be almost indispensable to the fulfillment of their importunate duties.

Of course, in the case of an invalid guest, or to accommodate any in arriving late, or leaving at an early hour, every one would willingly make any desirable change. I now refer to an ordinary visit. It certainly must promote the happiness of any reasonable person to know that his presence is no restraint, and no inconvenience.

Your own good sense and delicacy will teach you the desirability of keeping your room tidy, and your articles of dress and toilet as much in order as possible. If there is a chamber maid or a servant, whose duty it is to arrange the chambers, call upon her to do for you any extra service you may need. If you put her to *great* trouble, you know a trifle of money will reward her for it, if your pleasant smile and polite manner have not sufficed to insure you good-natured and prompt service. If there is a deficiency of servants, you would certainly not hesitate to make your own bed, and to do for yourself as much as possible, and for the family, all that was in your power. I never saw an elegant lady of my acquaintance appear to better advantage than when once performing a service which, under other circumstances, might have been considered menial; yet, in her own house, she was surrounded by servants, and certainly she had never used a broom, or made a bed in her life."

Lamps will have a less disagreeable smell, if you dip your wick-yarn in strong hot vinegar, and dry it, before triming.

Stove Polish.—Make a weak alum-water, and mix your British-lustre with it, perhaps two teaspoonsful to a gill of alum-water; let the stove be cold, brush it with the mixture, then take a dry brush and rub the stove till it is perfectly dry. Should any part, before polishing, become so dry as to look gray, moisten it with a wet brush, and proceed as before.

Miscellany.

[For the California Farmer.]

TO BETTY MARTIN.

On a rich plain, near where Cosumnes flow,
Where giant oak in stately grandeur grow,
Where lesser shrubs bedeck the forest glade,
Forming a cool, a sweet inviting shade—
There stands the cot that my poor presence grace:
Beneath an oak, the monarch of its race;
And while the cot can boast no luxuries rare,
It has a wealth that every heart should share.
Oh, happiness! it is not with the great,
In guilded halls of those who move in state,
Nor with the one who seeks to stir the strife
For money, honors, (filthy dregs of life,)
That fill his heart, (instead of sweet repose,)
With all the ills, the author of his woes.
Yes, here in morn, when Au'ras glance is seen
First in the sky, and then upon the green,
The feathered songster carols forth his lay,
Joyous to greet the coming of the day.
Thus from our slumber waked with notes of joy,
We rise refreshed and feel our spirit's buoy,
Hoping that thus our life may e'er glide on,
Until at last the final goal is won.
And yet we feel there's something wanting still,
A vacancy is here, a void to fill;
And though my years now number twenty-eight,
With comely face, and form of faultless shape,
I've look'd in vain, the happy one to find,
To personate the picture in my mind.
But now, again, an idea new beset me,
To mount my steed, and off to visit Betty,
And if perchance my vision should be true,
It's hard to say what poor frail man may do.
Oft in the silent watches of the night,
When all our cares have to'en their onward flight;
When sorrow, strife, and toil, are all forgot
On that sweet pillow in my lonely cot,
My sleeping fancy often turns to thee,
Thy fancied charms to view with ecstacy;
And if that form, which sleeping fancy drew,
But proves the same, the counterpart of you,
Then will this tongue proclaim, with heartfelt praise,
And bless the hand that penned the "rural lays."
And yet we feel that this must surely be,
For nature so willed it in her just decree;
That where the soul an angel mission bear,
The outward form angelic features wear.
I've read thy lays from one to number five,
And look again with eager anxious eyes,
Hoping to see no sorrow come to blight,
While rural cares are yielding thee delight.
I, too, despise the city and its strife,
Where men but live a money-getting life;
Where sorrow, trouble, poverty, and pain,
Take not one thought from filthy lucre gain;
Oh! rather give me some deep mountain glen,
Far, far remote from this our race of men,
With one true heart to cheer our lonely way,
And sing for me the happy rural lay.

RURAL TOM.

Florence Emerson; or, the Young Widow.

BY VIRGINIA DE FORREST.

"FLORENCE!" cried Jessie Lawson, bursting into her cousin's boudoir, one morning—"Florence Emerson, Harry says you are engaged to George Langford!"

"Well, cousin, if I were, have you any objections?"

"Objections! Why, Floy, he is old enough"—

"Just thirty-nine, cousin Jessie."

"Thirty-nine! and a widower, with two children! But it is a mistake of Harry's; you are not really going to marry him, are you?"

"I expect so," said Florence, quietly.

"Well, I give you up. You, Florence Emerson, the belle of the season, with a large fortune; you the beauty and heiress, with lovers, beaux, offers without end or number, to throw yourself away upon a poor widower with two children, and no fortune except in his profession. Oh! Floy, I thought you had more sense. What are you thinking of?"

"Why, Jessie, you are wasting your eloquence. George Langford is handsome!"

"Granted."

"Talented!"

"Granted, again."

"He loves me!"

"So do fifty others."

"And, last of all, my strongest argument, I love him!"

"Well, I suppose you will marry him, in spite of my disapproval, so I wish you joy, and hope he'll never hold up Mrs. Langford first as a pattern to Mrs. Langford second."

"If Mrs. Langford first was a model for me, I will follow in her footsteps."

"Well, well, there's one comfort. Willie and Edith are very pretty children, and too young to rebel at a new mamma, I believe. How old are they exactly, Floy?"

"Willie is four, Edith three."

"Keep you busy, the care of two such babies."

Florence Emerson and Jessie Lawson were cousins, and had, until Jessie's marriage, been almost like sisters. Jessie, who was two years the elder, was a gay, lively blonde, vain, and pretty. Florence was a tall, stately beauty, with large dark eyes, black hair, and features like a Greek statute. She was an orphan, and, as Jessie said, an heiress.

George Langford was a lawyer of some standing. Handsome, talented, but grave and quiet in his manners; devotedly attached to Florence, but he was thirty-nine, and a widower! Jessie's sentiments were echoed by all Florence's circle of friends when her engagement was known. She, so beautiful, young, talented, and wealthy! She always was different from other girls, they said. So after a few days, the matter ceased to be discussed, and the new wonder of the fashionable world took its place.

Florence had been married just two years, when it became necessary for Mr. Langford to go to Paris; his stay was to be very short, so he concluded not to take Florence. She was fond of home, had won the love of both children, and in return loved them fondly, and with their society, her home duties, and a promised visit to Jessie, thought the time of her husband's absence might be made to pass pleasantly. But when the hour of departure came, when his trunk stood waiting in the hall, and he came to say farewell, the whole aspect of things seemed changed. Florence felt that her dearest treasure was leaving her; all looked dark, and a vague presentiment of evil filled her very soul.

"Why, Florence, you are white as a corpse," cried George, in a frightful tone. "I thought you had arranged gayeties without number to occupy you while your grave old husband was away. Cheer up, Floy; I shall be gone only a short time."

"Oh, George, I did not realize it till now. What can I do without you?"

"You will visit Jessie, take Willie and Edith into the country, and—and—oh, you had a whole list of pleasures arranged. The carriage is here. Good-bye, Florence."

Florence tried to speak, but the words died on her lips. She grasped his hand, while her eyes filled with tears, and then let him go.

All her pleasures were forgotten as she watched the carriage rolling from the door, and she only remembered how lonely she would be without him; she looked back upon two years of such perfect happiness that it seemed less like reality than a pleasant dream. Long she stood at the window watching, as if she expected him to return, but the voices of the children roused her, and she stifled her own grief, and went to amuse and comfort them. Willie thought papa was "real unkind" not to take them; while Edith clung close to Florence, and hoped papa would be safe on the "deep water."

Jessie Lawson and Florence Langford were seated in the piazza of the pleasant country-house they had hired for the season, conversing. Edith and Willie were romping with Rover on the grass, while ever and anon their clear, joyous laughter would make the ladies turn and smile.

"I forgive you now, Floy, for marrying George," said Jessie, fondly. "I think that, if he had asked me, and I could have looked into the future, I should have done just as you did."

At that instant, Jessie felt a hand laid on her shoulder, and, looking up, saw her husband; his face was very grave, and his whole manner betokened that something serious had troubled him.

"Jessie," he said, in a low tone, "come into the parlor; I want to speak with you."

"He is jealous," whispered Jessie to Florence, as she rose to obey. "Now for a matrimonial lecture!"

"Close the door, Jessie," said Henry, when they entered the parlor. "I do not wish Florence to hear what I have to say now. Poor Floy! we must break it gently to her!"

"Why, Harry, what is the matter? George"—

"Yes. 'The Eagle,' the vessel he sailed in, was wrecked, and but few escaped; a vessel going to Calcutta took a few of the passengers, but the rest were lost. George Langford's name is among the missing!"

Harry had forgotten the open window and was startled to see Florence now standing in front of it. She was cold and pale as marble, her hands were tightly clenched, her teeth set, and her whole frame rigid and motionless. Harry sprang to her side, and took her hand to lead her in. The touch broke her stupor, and, with a slight shudder, she fell fainting to the ground.

For weeks, Florence Langford lay between life and death; fever and delirium succeeded her death-like trance, and her life was despaired of. A strong constitution, however, triumphed, and she recovered; but oh, how altered! The pale, thin face, seen now under a close widow's cap, was so wan and sad that few would have recognized the once blooming Florence.

Her sole comfort, now, seemed to lie in the children, *his* children. She would hardly allow them out of her sight, and her whole time was spent in instructing and amusing them.

Florence Langford had been a widow just one year. It was a bright summer's day, and she sat in the same little parlor where she had first heard of her husband's loss. Willie and Edith were seated on the floor beside her, blowing soap-bubbles. Florence sat watching their innocent delight as the sun shone on the pretty globes and reflected prismatic colors in them, and then her thoughts flew back over the last three years. Sadder and sadder grew the pale face, until Willie noticed it, and, leaving his play, went softly to her side; Edith knelt beside him, with her face laid caressingly against Florence's hand.

"Tell us about papa," whispered Willie.

"When is papa coming back?" asked Edith. "He stays so long."

"Hush, Edith," said Willie. "Papa can never come back; he is dead."

But Edith shook her head. She had always maintained that, as papa went away in a carriage, and said he would come back, and bring them pretty toys from Paris, he could not be dead.

Florence drew Edith upon her lap, and threw her arm around Willie, the three talked about papa for an hour; how much longer they would have remained in that position I cannot tell. Jessie interrupted them; her whole face was beaming with joy.

"Floy!" she whispered, kneeling on the stool at her cousin's feet, and untying her cap, "take this off for a minute."

"Why, Jessie?" asked Florence, suffering her to remove it.

"Because it is stiff and unbecoming," said Jessie, who was loosening Floy's hair, and twisting it over her fingers into its old curls. "You must never wear it again."

Dear Florence, a widow's cap is needless now!"

"Jessie," cried Florence, starting up, and looking eagerly into her cousin's face, while she trembled violently, "what do you mean?"

"Can you bear the best of news, Floy?" said Jessie, softly. "George"—

Jessie in answer threw open the door, and said, gayly: "Come in!" and in another moment Florence was in her husband's arms, and the two children were looking in a kind of joyful astonishment at their father.

All was soon explained. George Langford had been among the passengers taken to Calcutta, and had, from some mistake of the reporters, been put in the list of missing. Cold and exposure had brought on an attack of brain fever, and he had been very ill. As soon as he was able, he had started for home, but the voyage had been several months; and, after reaching England, he was detained some days before starting for America. He was there at last, and a happier party never met than the one that evening at Oak Lodge, Mr. Lawson's country seat.

VANISHED HOURS.

Bring not to mind those vanished hours,
They're gone, and let their memory die,
'Tis vain to weep o'er faded flowers,
When fresh ones grow unheeded by.
Say not thy lot is dark and drear,
That pleasures leave thee one by one;
O dost thou not thyself prepare
The cloud that covers up the sun.

Hope!—for the sun that sinks at e'en
Will rise to-morrow fair and bright;
Smile!—for the trees and meadows green
Laugh at the shower, and scorn its might.
Upward! 'tis thither thou must tend,
And "onward" must thy watchword be,
Then shall thy spirit learn to blend
The finite with infinity.

Don't Shoot the Birds.

Oh, it is the deed of a noble heart, which can ruthlessly slaughter the little feathered songsters of our forest—those brightest Psalmists of Nature, who are ever reiterating their jubilant songs of praise and thanksgiving, and praise, and love—whose harps are never unstrung—whose sweet, melodious voices come wafted like incense to us upon the Summer zephyrs, and floating onward and upward through the grand old woods, are caught, and re-echoed with new power, and new beauty, and varying tones, by a myriad tuneful chorists, until the very air seems filled with the essence of harmony, and the embowered branches of the o'erspreading trees are converted into a grand orchestral temple.

We love little birds. We delight, when suffering, and care, and sorrow, have left their impress upon our mind, or some dark shadow of Evil, or spirit of Gloom, or Genii of Despair, have crossed the brighter path of life, dimming our faculties, destroying our perception of enjoyment, and killing our very soul with the impress of Melancholy, to stroll into the woods, leaving the artificial world behind us, forsaking the hum and din, and turmoil of the city, turning our back, as it were, upon our fellow man, and shutting ourselves up in close communing with the mysteries, and wonders, and beauties of Nature. We love to cast ourselves upon the velvety, emerald carpeting with which the bounteous hand of Providence has so lavishly o'erspread the bosom of our common mother, Earth, beneath the shadow of some giant oak, whose branches mantle, and struggle, and entwine about each other, covered with bright leaflets, that wave and flutter, to and fro, like some enchained spirits of light, and forming a mystic tracery against the clear blue vault of Heaven—through which the beams of the bright King of Day struggle, and reflect with mellow softness upon all beneath.—gilding the trunk of the giant forest monarch, until it seems no vagary of fancy to think it some weird warrior of a bygone age, standing erect in all the pride of armor, and shield, and viser, and he met, who in the lone woods, like a true knight-errant, is awaiting the approach of the fair lady-love, falling upon you violet, which hangs its head in modest confusion at being thus honored, and looks so like a pearl, just sprung up from amid the grand bright sea of emerald.

Look up into that branch, whose beauteous curtain sweeps to and fro, responsive to every breathing of the wind. See you that merry little robin, hopping about its airy castle in all the ecstacy of joyous freedom,—now pecking pertly at the dun-colored cuticle of the tree; now prying coyly in its beak some fluttering leaf, and pulling and tugging, in sheer desperation, until it is severed from the parent twig; and then, like a busy, frugal housewife, flying down to that niche where the two giant arms of the oak separate. This is the home of the robin. This is the palace of nature's songster. There is a slight chirruping in the fairy castle, a faint, melodious scream of the young robins, who are vainly endeavoring to compass the harmonious notes of their parent, and the dame flies forth again from her nest. She has covered the floor of her mansion with a tapestry with whose brilliance and color, and elasticity of material no hand of man can vie. It was designed by nature, and penciled and corrugated by the zephyrs of Spring.

Hark! There is a sweet bird-song of wondrous melody, swelling from some distant nook of the wood like the full peal of the vesper of St. Peter's. Now they are louder and wavering, like the distant war-song of the Celtic knight upon the brink of the Lowery Lake. And they become more full, deep and powerful. There is a rustle amid the leaves of the oak,—a slight, bustling greeting of welcome from the dame robin, and her beautiful mate stands beside her upon the branch—and the twain, together, pour forth such joyous strains of heart-felt melody, that we pause to wonder whether they can ever be less merry—whether sorrow can ever find a home-seat in their little feathered breasts.

There is music in the very nature of the dark old woods. The rustling of the tiny leaves; the surging to and fro of the cloud-capped boughs, as they seem, each bowing to his neighbor; the dull heavy creaking of the trunk, as it is strained to more than its wonted tension by the wind; the shrill whistling of the breeze over the spear-like tufts of grass—all combine in a grand anthem of harmony, which art may imitate, but never even remotely rival. And when to these we have superadded the ten thousand choral songs of the feathered warblers, in every varying tone of harmony and power, from the shrill treble chirp of the wren, to the deep alto of the bob-o-link, or the sonorous basso of the flecker, it seems as if all about, above, around,—the very atmosphere itself—were alive with music in its sweetest form.

And we are thankful for the birds. We feel that the woods without them would be like—

"Some banquet hall deserted,
Whose lamps are fled, whose glories are dead,
And all but Hope departed."

We should miss them in the morning walk. We should miss their matin songs at even-tide. We should miss their sweet consolation for sorrow and despair in our rambles through the woods. We should miss them everywhere.

Then let us feel thankful for the—

"Ten thousand choral birds—
Some blue and some sun-dyed—
Some white as the farm-wife's curds—
Some tipped with the moonlight-hue—
Some red as the flame of war;
And on the crest of some,
Seemeth a fallen star."

Don't kill the birds. Let them live to continue their songs of goodness. Let them live to brighten our world of materiality and care, with their ideal poetry. Let them live to peal their morning, noon, and evening anthems to the Giver of all Good. Let them live to implant in the minds of innocent children the first happy lessons of the true and beautiful Nature. Let them live to keep company with their co-partners of poetic beauty, the flowers. As you would manifest the refinement of your mind, the uprightness of your heart, the sensibility of your nature—don't kill the birds.—*Troy Daily Times.*

Atmospheric Effect of the Cannonade at Sebastopol.—A correspondent of the "Post" states that a French *savant* ascribes the unusual rains and atmospherical disturbances over a great part of Europe to the prolonged and terrible cannonade in the Crimea. It is a little curious that we heard a few days ago a discussion upon the same topic here, by some scientific gentlemen, and it was observed that this fact was strictly in accordance with the theory of Prof. Espy, and was assented to by Arago and some of the most accurate meteorologists in Europe. The cannonade at Sebastopol was succeeded, as late accounts show, by profuse rains, which filled the trenches, and the same influence extended over regions thousands of miles distant. But it was rather in reference to the late violent whirlwinds and tornadoes in various parts of the world that the matter was here discussed, and it was admitted that the concussion of so continuous and prodigious a retonation had also an immense effect upon the great aerial circulation. Much, however, may be due to the action of liberated caloric from the flame of the multitudinous discharges of heavy cannon, as well as in the interfusion of extraneous gases with the atmosphere. The famous siege of Sebastopol promises to be a subject of interest to men of science as well as to men of war. In a conversation with some gentlemen attached to the navy, we were informed that during the Mexican war, when a large number of armed ships arrived at about the same time at the Pensacola navy yard, their continued firing as each came into the harbor was succeeded by a tremendous whirlwind which did much damage. We commend this fact to the attention of Lieut. Maury, whose particular business it is to look after the winds and the courses of the winds.—*Boston Courier.*

Preservation of Milk.—The following method is recommended for the preservation of milk, either at sea or in warm climates: Provide pint or quart bottles, which must be perfectly clean, sweet and dry; draw the milk from the cow into the bottles, and, as they are filled, immediately cork them well up, and fasten the corks with pack-thread or wire; then spread a little straw on the bottom of a boiler, on which place the bottles with straw between them, until the boiler contains a sufficient quantity. Fill it up with cold water; heat the water and, as soon as it begins to boil draw the fire and let the whole cool gradually. When quite cold take out the bottles and pack them with straw or sawdust in hampers, and stow them in the coolest part of the ship or in a cool place.

Some years since there was a Swedish or Danish vessel at Liverpool having milk on board, preserved in this manner. It had been carried twice to the West Indies, and home to Denmark, and had been above eighteen months on board; nevertheless it was as sweet as when taken from the cow.—*London News.*

On the [illegible] the Queen [illegible] the May [illegible] entered "Her Majesty at the Royal [illegible] Queen's [illegible] and which had been [illegible] by the Arab Mogno to Mr. Bar[illegible]

it in his lecture on preserved meats and vegetables. This milk was one year old, and was as sweet as when first drawn; a considerable quantity of cream had collected in the neck of the bottles."

CALIFORNIA SOAP AND CANDLES.—J. P. Dyer, Mason street, San Francisco, is now manufacturing Soap and Candles, of an excellent quality. Some 25,000 pounds of soap are now made by him monthly. Candles will be made in large quantities very soon.

THE MINES.—We have notes taken of the great mining interest that we visited last week at Park's, Long's and Ousley's Bars, which will appear next week. To our friends there we are grateful for their kind attention to us.

EXTRAORDINARY WHEAT.—The San Jose Telegraph says that Michael Marshall, living near Reed's Mill, adjoining San Jose, raised eighty seven bushels of wheat to the acre. He exhibited a cluster of wheat in tho straw, all the product of one grain of Chili wheat. There were ninety heads of wheat upon this cluster; each head averaged seventy-five grains, making in the whole the extraordinary yield of 6,750 grains of excellent wheat—the product of one single grain of Chili wheat.

MARRIED.

On the 2d August, in San Francisco, by Rev. Dr. Scott, Lyman Clark and Miss Elizabeth Phillips,

On the 3d August, in San Francisco, by Rev. R. P. Cutter, G. H. Loring and Miss C. M. Francis, of Boston.

On the 2d August, in Placerville, by Rev. J. L. Sanders, Mr. C. F. Irwin, formerly of Seneca county, N. Y., and Miss E. E. Garfield, of Oakland, Michigan.

On the 5th August, in San Joaquin township, Sacramento county, by Justice Grimshaw, Mr. Rockwell Young and Mrs. Nancy Cotton, all of that place.

On the 2d August, at Clinton, by Rev. Samuel B. Bell, J. T. Pomroy, Esq., of Kanosha, Wis., and Miss F. M. Howren, of Charleston, S. C.

DIED.

On the 5th August, in San Francisco, Mrs. Catherine Rogers, wife of James Rogers.

On the 31st July, in Shasta, of dropsy, Joseph Bailey, formerly of Hopkins county, Ky.

SPECIAL NOTICES.

☞ **Sands' Sarsaparilla.**—This preparation has now borne the test for over fourteen years' experience, since its first introduction to the public, and each succeeding year brings forward renewed testimony to its great value as a medicinal remedy. The unfortunate victim of hereditary disease, with swollen glands, contracted sinews, and bones half carious, has been restored to health ad vigor. The scrofulous patient, covered with ulcers, loathsome to himself and to his attendants, has been made whole. Hundreds of persons, who had groaned hopelessly for years under cutaneous and glandular disorders, chronic rheumatism, and many other complaints springing from a derangement of the secretive organs and the circulation, have been raised as it were from the rack of disease, and now, with regenerated constitutions, gladly testify to the efficacy of this inestimable preparation.

Agents—HENRY JOHNSON & CO.,
v4-5 1m 146 Washington street, San Francisco.

☞ **Doesticks, the Great American Humorist.**—His new book is published, elegantly illustrated; 12mo., bound in cloth, extra gilt; and selling in every city, town and village in the United States. 10,000 copies sold the first week of publication. Buy it. Read and laugh!

EDWARD LIVERMORE, Publisher,
v4 5 2w 29 Beekman street, New York.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President.

☞ WISTAR'S BALSAM OF WILD CHERRY not only cures every species of lung complaints but it exerts a very powerful influence on a DISEASED LIVER. In this complaint it has, undoubtedly, proved more efficacious than any remedy hitherto employed, and in numerous instances when patients had endured long and severe suffering from the disease, without receiving the least benefit from various remedies, and when mercury has been resorted to in vain, the use of this Balsam has restored the Liver to a healthy action, and in many instances effected PERMANENT CURES! After every known remedy had failed to produce this desired effect.

*** Be sure it is signed I. BUTTS on the wrapper.

do lodging, per week.....$15 to $20 00
Board without lodging, per day.....$2 50
do lodging, per day.....$3 25 to $4 00
Lodging only.....$1 and $2 per night.

R. J. MURRAY, Sole Proprietor.

MISCELLANEOUS.

California Brooms.

"Encourage Home Manufactures."

THE undersigned are happy to announce to the community that they will offer to them about the 10th of August,

Three Hundred Dozen California Brooms.

These brooms are made from stock grown in California. The broom brush was raised in Sacramento county, (the queen of prairie land;) the handles from timber from our own mountains; and the work by our own citizens. We have, 'tis true, imported machinery for the manufacture of brooms; but hope ere long that the genius of California will produce machinery for all the departments of labor.

We shall have samples of our Brooms at the State Society's Rooms on Fourth street, and at our own store, when we trust our citizens will be happy to give preference to the home industry of California.

We shall commence immediately the work of manufacturing, and those who wish our brooms should send in their orders. They will be answered according to their date, as we expect sale as fast as we can manufacture them. We intend they shall be as good, if not the *best brooms* ever offered for sale in this State. LUSK & CO.,
v4-6 Corner of Fifteenth and O streets.

PHŒNIX STALLS,
In Sacramento Market.
Nos. 7 and 8.

New Brick Building, K street, above Third, south side.

The undersigned, in opening this new establishment, hope by giving unremitting attention to their customers, to merit a share of the favors of which they have heretofore been recipients to such a liberal extent. Their stock will comprise a full selection of the best Beef, Mutton, Lamb, Pork, Veal, Domestic Sausages, sugar-cured Corn Beef, &c., &c.

They will also have a supply of all kinds of Game and Vegetables, in their season. Purchasers can have their parcels sent to any part of the city, *free of charge.*

Orders attended to promptly.
v4-6 E. J. BOSLER & CO., Proprietors.

WHEELER & BROOKS,
EXCELSIOR NURSERY,
10th street, between F and G,
Sacramento City.
Fruit and Ornamental Trees, Vines and Shrubbery
of all kinds. v4-6

COPARTNERSHIP NOTICE.

THE undersigned have formed a Copartnership for the purpose of continuing and carrying on the **Furniture Trade** as Wholesale and Retail Dealers and Importers, in this city and Sacramento, under the name and style of HOWES & CO.

Resident Partner, Boston,.....R. HOWES,
of the old firm of Howes & Co.,
180 and 182 Montgomery street.

Resident Partner, San Francisco....DAVID MOORE,
San Francisco, *Sacramento,*
139 Jackson st. 103 K st

Resident Partner, Sacramento.....B. C. NEWCOMB,
77 K street, Sacramento City.

San Francisco, May 8, 1855.

To Our Friends and the Public.

By uniting the above three firms our capital is largely increased and our *expenses reduced more than one-half* which enables us to offer you a greater variety of Goods at

15 to 25 per cent. less than our former rates.

One of the partners will be in Boston and New York to purchase goods, and will take advantage of the markets to obtain such goods as are **desirable,** at the

Lowest Cash Rates.

Three years' experience will enable him to select stock that will

Defy Competition in Quality and Prices.

We are now before you with a large and

DESIRABLE STOCK OF NEW GOOODS,

and shall endeavor to merit a share of your patronage. It will be our pride to give

Perfect Satisfaction,

both in *quality, prices, and good treatment.*

HOWES & CO.

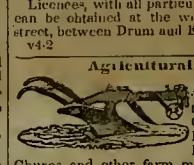
Hay Rakes and Forks;
Scythes and Smiths;
Grant's Fan Mills, &c., &c.

Received and for sale by
TREADWELL & CO.,
v3-13 corner California and Battery streets.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.



From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

Agricultural Tools and Seeds.

PARKER, WHITE & GANNETT, 47, 59 and 63 Blackstone street, Boston, Mass., manufacturers of Plows, Ox Yokes, Store Trucks, Fan Mills, Horse Powers, Mowing Machines, Reaping Machines, Horse Powers, Churns and other farm machinery and tools; Shiice Forks, Grain Cradles, &c., &c. MISCELLANEOUS.

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATHER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-33m.

N. B.—Branch House at Marysville. All orders promptly attended to. v3-5

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Athenæum Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself *principally* to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and *Hospitals*, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned; Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testes (or in other words, all diseases of the Genito-Urinary Apparatus) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with comfortable boarding houses and experienced and attentive nurses.

Latest Importation.

WE would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of

STAPLE AND FANCY GOODS,

which have been received direct from the manufacturers and importers the past week, per clipper ships "Flying Cloud," "Samuel Russell" and "Red Rover," which, in addition to our former stock, makes it by far THE LARGEST IN THE STATE OUT OF SAN FRANCISCO! And for quality and cheapness, we defy competition; and we say, with fear of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.

200 Parasols, new, rich and beautiful;
100 pcs. latest style Bonnet Ribbons and Trimmings;
50 pcs. assorted colors, Barege and Tissues;
85 patterns fancy Barages and Tissues;
25 pcs. plain and dotted Swisses;
40 pcs. plaid, striped and plain Jaconet;
865 yds. Wash Lawns, $1 a Dress Pattern.

Mens', Youths' and Boys' Summer Clothing.

Manufactured by our House in New York, in the very best style.
BONNETS—Misses' Flatts, Boys' Hats, &c.
Together with a great variety of other Fancy Goods, for the Fourth of July celebration, too numerous to mention.

CHAS CROCKER & CO.
v3-26 246 J street, between Eighth and Ninth.

IMMENSE SACRIFICE!

THERE is no use in throwing 50 per cent. away these hard times, when you can purchase the same articles at
50 per cent. Cheaper
than in any other house in California.

HILLER & ANDREWS.

These well known Jewelers will commence selling off their immense stock of rich and valuable

Diamonds, Fine Watches,
Jewelry, Silverware, &c., &c.,

At New York cost. We do assure the public that there is no humbug in this, and we are determined to close out our

Immense Stock at Cost,

and invite the public to call and examine for themselves, before purchasing elsewhere. We have now, by far the largest stock in the State, and it is necessary that we reduce our stock.

Remember 59 J street, near the corner of 3d. v3-26

OIL! OIL!! Camphene.!!!

A BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned having this day established his customers at the above place, at 51 K street.

Crude Oil, Camphene, &c., as well as the manufacture of Burning Fluid, which is warranted to Burn Clear, Pure Sperm, Neat's Foot, Tanners Oil, Camphene Turpentine and Alcohol, which we will sell as cheap as the same quality of goods can be purchased in San Francisco.

We have also on hand a large stock of Sperm Candles, which we will sell at San Francisco prices. [v4-1] WILLIAM BAILEY.

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, with out interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 tell C. M. DAVIS, Proprietor.

Wilson's Exchange,
By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. JAMES, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v3-25

Rassette House.
SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

American Hotel
NAPA CITY,.....CALIFORNIA.
L. A. & W. W. CHAPMAN, Proprietors.

GOOD accommodations for families, and on reasonable terms. Saddle and buggy Horses kept for hire. Horses kept on board, by the day or week, and well taken care of. '26

Benicia Female Seminary.

THE Fourth year of this institution opens July 23, 1855. This is one of the oldest Female Seminaries in the State, and therefore well known. There is now a full corps of teachers, and those who are well qualified to fill their respective departments. A German lady, and an artist in her profession, is teacher of Music; and a French lady, as skilled in Drawing, is teacher of French and Drawing.

The School and Boarding Department are entirely under the supervision of the Principal.

Terms.—(Payable quarterly, invariably in advance.)

For Board and Tuition in English branches, per week	$7 50
Washing, per dozen	1 50

Extra Charges.

French, Spanish and Drawing, per month	$ 3 00
Music, with use of Piano, per month	10 00

Important to the Dairymen of California.

HORACE GRANGER, No. 1 Washington Market, would respectfully inform the Farmers and Dairymen of California, that he has established himself in San Francisco, for the purpose of receiving and selling Butter and Cheese, and will make liberal cash advances on consignments. Those who have been in the habit of sending their produce to Sacramento, can now have it sold in San Francisco, and save the expense of freight and commissions. (Those who may prefer the Sacramento market, can have their produce sold there, at any time.) Butter and Cheese will be received on board the steamers at Sacramento and Stockton, and sold on the arrival of the boats in San Francisco, and the proceeds returned by the same boats. Butter and Cheese wanted for the above markets.

Reference can be had to the following gentlemen, who have been in the habit of consigning their produce to me for sale in San Francisco: Messrs. Hall & Hunt, Sacramento; Messrs. Hall & Hunt, Stockton; Messrs. Hall & Hunt, Marysville; Messrs. Hall & Hunt, Red Bluff; Messrs. Hall & Hunt, Shasta; Messrs. Hall & Hunt, Colusi; Messrs. Hall & Hunt, Yreka; Messrs. Hall & Hunt, Fort

GREAT SNAKE FIGHT.—Mr. Daniel Terryman, communicates to the Massillon (Ohio) News a thrilling encounter he had with a rattlesnake. On first discovery, his snakeship was preparing to appropriate to his use a squirrel by the side of the road, but probably faneying larger game, "put after" Mr. T., who gave "leg bail," and ran. On finding that the gap between him and the snake was closing, Mr. T. sought the first weapon in the shape of a club, and turning gave the snake a blow just as the reptile was pausing and gathering for the fatal spring. The blow just came in the nick of time, and just in the right spot, severing the head from the body. Mr. T. says after the head was severed the body continued to run in different directions, as is generally the case previous to death—but in this case it continued for an unusual length of time, owing no doubt, to the size of the reptile, and the amount of musular strength which it possessed. After it became sufficiently quiet, so that it could be straightened out, he measured it closely, and found it to be exactly six feet eleven inches in length, by nine and a half inches in circumference, being the largest one of that species that has even been seen in that region of country.

JANE O'FOGARTY'S DESCRIPTION.—The subjoined advertisement is extracted from an Irish newspaper: "Missing from Killarney, Jane O'Fogarty, she had in her arms two babies and a Guernsey cow, all black, with red hair and tortoiseshell combs behind her ears, and large spots all down her back, which squints awfully."

"NEVER be critical to the ladies," was the maxim of an old Irish peer, remarkable for his homage to the sex; "the only way a true gentleman ever will attempt to look at the faults of a pretty woman, is to *shut his eyes!*"

To enjoy to-day, stop worrying about to-morrow. Next week will be just as capable of taking care of itself as this one. And why shouldn't it? It will have seven days more experience.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis. Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish nearly success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied with a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "SIR—Having been afflicted for more than forty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one in four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this cause.

Beware of Counterfeits and Imitations—Syrups and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

TOBACCO.
Virginia Manufactured Tobacco Agency.

GREENE, HEATH & ALLEN have removed from Cahoon's street to the cor. of Washington and Battery streets where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call. Amongst the brands offered are the following:

200 boxes	Crumpton's Four Aces;	
75 half boxes	do	Medal;
50 packages	do	Sovereign of the Seas
60 do	do	Bride of the Pacific;
100 boxes	Halsey's Four A's:	
100 do	Saunders' Harry of the West;	
50 do	James Boyd's Gold Leaf;	
50 do	do	Anna Bishop;
25 do	A. Thomas' Club House;	
50 do	Ferguson's Star of the West;	
50 do	Miller & Crenshaw's Bluff City;	
20 do	Royster's Mary's Own;	
40 do	do	Incineble;
100 do	Thornton's Cantelope;	
50 do	Dickinson's Witch's Eye;	
50 do	Crosby & Wootten's Metropolitan.	

In addition to the above, we have 2,000 packages of ordinary brands; and as we sell exclusively on Commission for the Manufacturers of Virginia, we can furnish the trade with any quantity or quality required, at the lowest rate. v3-16

New Invention!
Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls. After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention,—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON.
v3-16 Third street, South Beach, near South Park.

MEDICAL.

SANDS' SARSAPARILLA.
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Bites, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still hearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven incisions formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and as rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

H. & R. S. HAYT, A. M. TROWBRIDGE,
GEO. T. DEAN, C. EASTWOOD.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Chebeguge, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

2 gross	Lubin's Extracts, assorted;
50 lbs	Oil Lemon, (warranted pure;)
24 doz	Olive Oil;
10 lbs	Red Potass;
100 lbs	Spirits Nitre, concentrated;
2000 lbs	Sal Soda; 1000 lbs Epsom Salts;
500 lbs	Sup. Carb. Soda;
24 dozen	P. P. Syringes, glass;
300 lbs	Tapioca;
200 gross	Assorted Vials;
2000 lbs	White Lead;
500 lbs	Assorted Paints, ground in oil;
2 tons	Putty; 10 packs Gold Leaf;
25 gross	Pills, assorted;
5 gross	Sarsaparilla, assorted;
200 boxes	Window Glass;
200 dozen	Small sized Castor Oils;

And other Drugs and Medicines too numerous to mention, all of which will be sold low, by
v3-24 J. L. POLHEMUS.

MISCELLANEOUS.

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)
157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.
v4-1 COLLINS & CO.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,
MARYSVILLE.
Corner of California and Battery streets, San Francisco.
No. 56 Federal street, Boston.

IMPORTERS of Hardware, Iron, Steel, Cordage, Paints, Oil Varnish and Window Glass, direct from the Atlantic States an Europe, with a COMPLETE ASSORTMENT OF TOOLS AND IMPLEMENTS for *Farmers, Miners, Carpenters, Coopers, Caulkers and Gravers, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others.* v3-5

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements in conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for buying and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands, from the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *register*, (already prepared,) of all persons, (except Chinese,) within the limits of the city; by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly a class in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time I contain the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.
v3-18 WAINWRIGHT, RANDALL & CO.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Protean, under Gardner's Patent, filled with ease and rapidity, supplying the pen from eight hours, and saving about one-third of the time. A Gold Pen to the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the Pen on, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither waste nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on tight by when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upwards, the piston pens with the cap downwards.

Use good ink, free from sediment; Hendley & Field's American Fluid, also Bryan & Wilcox's, and Arnold's Fluid Ink, recommended to the public, as they will serve you. v4-5

Ferry Notice.

NOTICE is hereby given to all persons interested, that the undersigned will apply to the Board of Supervisors of Sacramento county, on the 12th day of June, 1855, for a hearing, when they shall then be in session; at which, then and there they will request that they shall be in session, for a renewal of the license to keep two ferries across the American river; one of which only known as "Hoyt's Ferry," near where 28th street in Sacramento City intersects said river; and the other commonly known as the "Middle or Muldrew Ferry," about two miles above said Sacramento City. AGRICOLA'S LETTERS.—NO. 11.

On Stall-feeding of Animals.

[CONTINUED.]

EDITORS FARMER: In fattening of animals, we have already seen that the carbonaceous portion of their food, which goes to supply fat, is the same material that is necessary in producing animal heat; hence the propriety of having them in sheltered places, where they are not necessarily exposed to cold. We also know that their bodies are constantly undergoing change; the flesh and blood of which they are composed to-day gradually yielding its place to that which is being formed, like the water in a running stream; and that like it, the more they are at rest, the more limited the supply necessary to furnish the same quantity of transient matter in any given time; hence the advantage of having them tied up. We have also seen that the action of a brilliant light is capable of partially decomposing the incipient elements of fat, and vaporizing them before it is possible for them to become so; hence the propriety of shutting them up in twilight gloom, where the greater portion of daylight may be excluded. Let us now proceed to investigate the philosophy of proper aliments for accomplishing our purpose, and, principally, how far potatoes are suited for that purpose.

In its ordinary state 100 parts of the potato contain the following substances:

Water,			75.9
Carbon,	10.604	Solid matter dried at 230° Fahrenheit *in vacuo*,	
Hydrogen,	1.3978		
Oxygen,	10.7727		
Nitrogen,	0.3615		
Ashes,	0.9640		24.1
			100.0

whereas turnips, for which we propose it as a substitute, contain

Water,	92.5
Solid matter,	7.5
	100.0

according to the experiment of Boussingault—the solid matter in turnips being almost identically the same as in potatoes. It will thus be seen, that potatoes contain more than three times the amount of nutritive matter that turnips do. So far they have the advantage. But let us examine in what manner the comparative value of different species of food may be ascertained, so that we may have some surer guide to direct us than merely the *quantity* of the solid matter which they contain.

The rules, which modern Science has pointed out in such investigations, are beautifully simple and correct. In Agriculture, it tells us, that, except so far as the elements of the plant are derived from the use of the atmosphere and of water which bring them from the soil; and that the soil furnishes to each plant, the more nearly its own resemble those of the plant, so much the more capable it is of supplying them. In Animal Physiology the case is exactly parallel. We have first to ascertain what the animal is made of; and then to supply the necessary materials in its food. In stall-feeding we have got the animal, we shall suppose, already full grown; consequently we have principally to furnish food, capable of yielding fat, with the exception of a little to maintain what is daily undergoing change, from old, effete, and worn out matter, to newly formed flesh and blood, assimilated from the food of the animal, for that purpose. Potatoes, as everybody knows, contain a large quantity of starch; and it is principally owing to the similarity of the elements of starch and fat that they possess their fattening qualities. "Starch consists of 12 Carbon and 10 Water, represented by C_{12} H_{10} O_{10}. Fat again, Margarine for example, the solid fat of the human body, is represented by C_{37} H_{36} O_5. Compare this with 4 of Starch and we have:

4 of starch=	C_{48} H_{40} O_{40}
1 of Margarine=	C_{37} H_{36} O_5
Difference=	C_{11} H_4 O_{35}

which may be represented by

11 of Carbonic Acid, 4 of Water, 9 of Oxygen
11 CO_2 plus 4 HO plus 9 O

so that by a separation of Carbonic Acid, which may be given off from the lungs, of water which may or may not remain in the system, and a portion of oxygen, which may be used in various ways in the blood, the starch or sugar of the blood (for their elements are nearly identical) may be converted into fat."*

This reasoning is beautiful and appears conclusive. When we take it into account, as we saw in last Letter, that the chyle from the stomach meets with the venous blood, containing the partially oxidized remains of the animal tissues, the same in composition as diastase or ferment, in the vena cava, is thence taken to the heart, and afterwards sent to the lungs to be churned and exposed to the atmosphere, we need not be surprised though they assist in transforming each other, and that heat, carbonic acid, and incipient fat are produced by their combination with oxygen. But we must not imagine that all the starch in the food, or even in the chyle, can be immediately, on its first contact with atmospheric air, transformed into fat; and neither starch nor sugar is found in arterial blood. The process which Nature adopts, is, doubtless, to convert the greater portion of chyle into blood, (to furnish which nitrogenous food is necessary,) and afterwards into the different constituents of the animal frame; and, although some foods, from their containing so much more carbon in their composition, are so much better qualified for furnishing the elements of heat, or fat, we must not imagine that those which contain the elements of nutrition can be dispensed with. "In a correct plan of dieting," as has been remarked by Dr. Thomson, who made some valuable experimental researches on the food of animals, at the instance of the British Government, "the proper equilibrium must be retained between the animal organism and the constitution of the food, otherwise, either the nutritive or the caloritient system must be deteriorated. It is well known to feeders of cattle, that an animal fed on large quantities of potatoes is liable to complaints, such as affections of the skin, and also to loss of weight. These consequences, it may be readily inferred, are derived from the want of the *proper balance* between the elements of food."

This is consistent with our experience of Nature in all her operations. She will submit to be aided, not to be altered. She will adapt herself to circumstances which are not at variance with her usual course, but she will not bend to conditions which her Author never meant her to comply with. In furnishing, therefore, animals which we intend to fatten with food rich in the elements of fat as potatoes are we must supply them with food containing the nutritive elements of the blood, not only to escape disease, but also to advance the object which we have principally in view. Of all the vegetables generally cultivated, none are more valuable for this purpose than the English horse bean, as it contains fully one per cent. more nitrogen than the common kidney bean of this country, besides having the advantage of being a more hardy plant, and one which is admirably adapted to the stronger soils of California. According to Boussingault, while potatoes contain little more than 1-3 per cent. of nitrogen English horse beans contain 5 1-2 per cent.; from which it has been calculated, that, to supply the ordinary waste in a full grown animal, only 5 pounds per day of bean meal would be requisite, while 67 pounds of potatoes per day would be necessary to accomplish the same object.

In conclusion, I would recommend,

1. That great caution should be used in stall-feeding animals with potatoes, especially at the commencement.

2. That the quantity of potatoes given to them every day should be divided into four parts, of which one part should be steamed or boiled, and mixed with 3 or 4 pounds of bean meal and a little salt, and given over night; and the other three-fourths at three separate times during the day.

3. That as much good hay as the animal will eat, which will supply any additional nitrogen that may be wanted, should be given immediately after feeding with potatoes.

4. That due attention be paid to having them watered in the house, at least twice a day.

5. That regularity in feeding and watering be duly observed.

6. That they be kept clean, and have plenty of litter, and be otherwise housed and cared for as I have previously recommended.

7. That, for ascertaining the proper quantity of potatoes to supply them with, attention ought to be paid to the consistency of their dung, which should resemble that of cattle plentifully supplied with grass, when they are not purged by it.

Now, Messrs. Editors, except we renew our arrangement, I presume the quota of Letters originally contemplated have been completed; and, as it is possible, that, except as an occasional correspondent, my contributions to your periodical may cease, allow me to remark to that portion of your readers, who have done me the honor to peruse them, that, when I first commenced, I meant to have entered more into the discussion of practical Agriculture; and am still of opinion, that there are many subjects connected with it, which, though of great interest, and worthy of being investigated by philosophical inquiry, ought to be familiarly illustrated by special reference to their connection with ordinary field operations, and the utility of such investigations rendered evident to those, who are perhaps not so conversant with books as with knowledge derived from experience.

AGRICOLA.

ERRATA.—In Letter No. 9 I inadvertantly, in the fourth line after the Table, put KO, the formula of Potash, instead of CO_2, the formula of Carbonic Acid; and in the following line CO_2 for KO.

A.

A Chance for Settlers.

MESSRS. EDITORS.—In an editorial in the San Francisco Herald, advocating the establishment of an immigration society, I notice one reason given of our population not increasing, is the want of land to supply the farmer. This being the case, allow me to call the attention of those wanting farms to our valley adjoining this place. There is here a very large tract of government land equal to any in the State, as has been proved by the crops raised by the two or three squatters who are located upon it. But the main [illegible] must want [illegible] settler is the difficulty of [illegible] a market for their grain at their very doors, and at [illegible] remunerative prices. The population is [illegible] no attention is paid to agriculture. They buy almost entirely all they consume, and flour never sells here for less than $10 per 100 lbs., on account of the heavy expense of getting it here. Tens of thousands of dollars leave our county every year for this article alone, which could be retained, by having producers, to whom a handsome profit would be allowed.

We have three grist mills in the county, which is more than in any county south of Santa Clara, and the farmer is certain of selling every pound of grain he can raise, at very remunerative prices. All of this valley can be irrigated, and tobacco will grow beautifully upon it.

S. A. P.

San Luis Obispo, Cal., June 15, 1855.

The above letter was received but recently, owing to the *excellent mail facilities*—(it was only a month in coming.) We commend it to the cultivators of California, who may be in search of a home.

If our correspondent will give us his real name and the names of some of the principal citizens in that neighborhood, we would present the matter more fully and speak of it in a stronger sense; but strangers and settlers will not rely upon mere newspaper assertions, neither could we recommend them to do so.—En.

Hope for all Things.

WE have great faith in the reformatory spirit which now pervades all ranks of men;—strong faith in the better influence which systematic, successful husbandry exerts—; hope and believe, that by and by, barns and barns-yards, hog-pens and the "animals" which are monarchs within them, hen-roosts, bee-hives, etc., etc., will all get ashamed of their filth, and ask to be removed out of the highway, back, behind the house, to which position they are entitled past dispute; that, in fine, the superior utility and *beauty* and prosperity of *good farming*—of doing every thing just as it should be done and just *when* it should be done, will draw all farmers, pretending or real, into the rightful channel, after a while. Sprouts often go upright when the parent trunk is a gnarled, twisted old body; so the boys, with plastic minds, whose fathers are your hap-hazard, whiffling sort of farmers, often take a straightforward course and turn out to make sterling, business men.

The world with all its beauty, order and regularity, was never compiled for mere pastime. And the farmer who does not learn from its wonderful order to be orderly—from its unswerving regularity, to be regular and systematic and seasonable in all his operations, and from its beauty to adorn his portion of its surface, ought to lose his gravity and fly off in a tangent. There is a "manifest destiny" here, and farmers—not politicians—should mount the car. We all want to get into the channel of *thrifty farmers*; this should be the desire and aim. We have faith that most farmers will come to this. An unthrifty farmer should be, like Webster's National Bank, "*an obsolete idea.*" *Thrifty farming!* what is it? Simply, by good management to raise paying crops: grandly and ultimately the affording to all men, increased means of living, and of mental and social improvement. To achieve this result, what unparalled means—what an unsurpassed armament of talent and energy are now concentrated upon its accomplishment! Profoundly learned men in both hemispheres; powerful mutual associations; colleges and schools; sound, practical men every where; periodicals of great ability by the million; all leavened and brought to active [illegible] bearing upon the one point—to solve the one important query—how *shall the productions of the arable earth be increased with less cost?* Just think of the [illegible] and say for [illegible] not we [illegible]; and if there is not encouragement [illegible] to strive to [illegible] good farmers.

Remember that there are [illegible] in the influence of good examples—[illegible] as in mercy.—*Bost. Mech. Farmer.*

THE PEERLESS POTATO [illegible] for true is the only kind [illegible] known free from the disease. It is very productive, and is a very good [illegible] of the varieties [illegible] of England [illegible] for sale. The [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, AUGUST 17, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

☞ MANUFACTURERS of every branch, Nurserymen, Seedsmen, Florists, Booksellers and Publishers, and every branch of business connected with California interests, should advertise in the CALIFORNIA FARMER, if they wish to have their business known over the country.

A WORD FOR THE CALIFORNIA FARMER.—Who among our many readers will bear us in so kindly a remembrance as to induce *one, two, three* or *five* of their neighbors to become, like them, subscribers. We wish to enlarge our list, so as to make our paper better. What subscriber will speak to us first?

Agricultural Meeting—The Next State Fair

A MEETING of the Yuba and Sutter County Agricultural Society, was held on Monday evening, at the City Hall. The two counties were well represented by the farmers present. After the transaction of the business, the Society was addressed by Rev. Mr. Briggs, of this city, and by Col. Warren, of the FARMER. Their remarks were listened to by an appreciative audience and heartily applauded. Among the resolutions passed at the meeting was one which we respond to cordially. It asked that Marysville be chosen as the place for holding the next State Agricultural Fair. It will be recolleeted that the first State Fair was held, as was proper, at the city of San Francisco. The Bay City is the centre of trade, of intelligence, and of wealth, in our State. In its vicinity are many fine valleys, which contain some of the best farming lands in California. San Francisco being the metropolis, and the agricultural resources of its neighboring valleys being earlier, and perhaps better developed than the lands of other parts of the State, its claim to the first State Fair was acknowledged by the farmers and artisans of the State. There it was held. This year, Sacramento has been chosen as the location of the Fair. The Levee City ranks next in importance to the Bay City. The industry of its citizens is untiring, their enterprise unbounded. It, too, is surrounded by a fine farming country, which, by the toil and skill of the tillers of the soil, is being rapidly developed, and made to contribute of its resources to the wealth and growth of Sacramento. It is right that there the second State Fair should be held. *Our claim comes next.* Marysville is conceded to be the third city in population and wealth in our State. Our ability to entertain the hundreds and thousands of strangers whom this Annual Fair brings together, from all sections of the State, is unquestioned. Our citizens have a lively interest in the development of the agriculture of the State. They are ready to further, with their means and their influence, all enterprises which tend to this result. They know that those Fairs serve this excellent purpose, and as much to show their interest in the prosperity of the State Agricultural Society, which is the patron of the Agriculture of the State at large, as to manifest their sympathy for and readiness to co-operate with the farmers of Yuba and Sutter, do they earnestly and cordially urge that this invitation to hold the next State Fair be heeded by those having authority to determine this matter, and for the farmers of Yuba and Sutter we can speak confidently. They are in earnest, when they ask that the next Fair be held in their vicinity—in the metropolis of the North. The farmers of Southern California were accommodated and benefited by the location of the first Fair in San Francisco. Those of the centre of the State, in like manner, are favored this year, by its location at Sacramento. Next year, say our farmers, it is right and proper that the Fair should be held in the North, and among us. We are ready to lend our best endeavors towards the success of the Fair, say they, and we need the reciprocal influences for good upon the agriculturists of our vicinity, which such a gathering of farmers and such a display of the agricultural and mechanical products of the State must necessarily occasion. We earnestly hope for and bespeak a favorable response to their request.

We copy the above from the Marysville Herald, and can most cheerfully say that having spent some time in Yuba, Sutter and Butte counties, we have found an awakening interest for agriculture that is most gratifying. Were it not for the great hindrance to progress that exists by reason of *unsettled titles*, the improvement that would be made in Yuba and Sutter upon farms, gardens and ranches would amount to *millions of dollars*. There are hundreds of substantial farmers and stock raisers that are now laying, as it were, idle; not knowing whether to buy or sell out. There has been so much litigation, so much *bad advice*, that it has engendered bad feeling in many cases. What is now wanted is the "olive branch." We know land owners are kindly disposed, and that settlers are desirous to act honorably, and there is but one way to do—forget the past, come together, be friends, and in an honorable, frank and kindly spirit, meet each other; and all these difficulties will disappear as mist before the sun.

In speaking of "land owners" in No. 5 of our paper, and in mentioning the names of parties, we had then met but a few; since that time we have met Wm. H. Sampson, Esq.; Messrs. Gillespie & Fowler; G. N. Sweezey, Esq., and others, and we are more and more convinced that friendly intercourse and mutual concessions will speedily remove this great evil, and a new and brighter face be put upon the agriculture of this section of the country.

In this connection we would speak in terms of strong commendation of those Presses that hold out the "olive branch," and do what they can to unite men in the bonds of peace and friendship. We like the earnest enthusiasm of both the editors of the Marysville press in the cause of agriculture, and were gratified to see them both present at all the meetings of the new Society. The whole tone of the above editorial is highly honorable. It is clear and explicit, conceding to each of the three first cities in the State their relative positions and claims to public notice, and after very handsomely complimenting San Francisco and Sacramento and paying them deserved meeds of praise, it claims for Marysville only what is just and right; and we fully endorse what is said respecting the interest which the farmers feel in the matter.

The decision of the question—where shall the Fair be held in '56?—remains for the determination of the State Society. We shall labor to have it where the greatest amount of good can be accomplished.

To the Press of Marysville the farmers are greatly indebted: they devote a large space freely, and for this they deserve all praise. Personally we return many thanks to them for courtesy and kindness. If the Press throughout the State would all unite to advance the cause of agriculture, they would find their account in it.

Weekly Accounts of Fruits Exhibited AT THE SOCIETY'S ROOMS.

AUGUST 15—Two Bartlett Pears?—largest, long diameter 11 inches, short diameter 8 1-2 inches; smallest, long diameter 10 1-2 inches, short diameter 8 1-2 inches. This fruit is unexampled in this market, up to this time. Weight of the two pears, one pound.

Fruit of the Cactus—largest, long diameter 8 1-4 inches, short diameter 6 inches; weight, three ounces.

One bunch of matured Purple Grapes, weighing fourteen ounces.

The above magnificent fruit is from the extensive gardens of *that pioneer* in North California Horticulture, J. R. Wolfskill, Esq., at the head of Puto.* Send your fine specimens, friend Wolfskill, to the Rooms of the Agricultural Society; it is the only legitimate place in the State to exhibit them, and where everything exhibited passes under the inspection of appropriate committees, whose duty it is to report them for publication.

* The Puto is a small river, which is given off from the Coast Range, and passes down through the estate of Mr. Wolfskill, and finally, with Cash Creek, forms the extensive marsh in Yolo county, and ultimately discharges into the Sacramento river. The name is derived from a tribe of Indians who formerly inhabited both banks of the stream. They were known as the Putos; a remnant of them still remain, but they are fast passing away; hence, to perpetuate something of the history of this aboriginal tribe, the correct name is PUTO, and should be so written, instead of the vulgarism, *Putah*, which *bad taste* has somewhat sanctioned. B. B. B.

SPECIAL NOTICES—ALICE.—A heatry welcome do we give to our new correspondent and graceful writer. For the "Acrostic," our sincere thanks: the handsome compliment paid us and our journal we duly appreciate. For the "Summer's Farewell" we know all our readers will thank "Alice;" for although the season itself may have passed, as we read these glorious thoughts and trace in this glowing imagery the departed Summer itself, there is so much brightness that we heed not the "shades of Autumn," or dream of "falling leaves." "Alice" will be ever welcome.

"California," by "'49," is exceedingly interesting.

RECEIVED.—To "Betty Martin," by "Squatter." "Agricola," No. 12. "Roving Jack," No. 8. "A Dream." The "Birthday Cake," with other valuable MSS, which will all duly appear.

TO OUR READERS.—To stock raisers we commend "Agricola's" letter on "Stall Feeding of Animals," commenced in the last and finished in this number. It is information of the most valuable kind.

"Official Notices of the Fair."—Please examine each, and think what you can do to aid the great work. Resolve, and put the resolve into execution.

OMISSION.—In our reports of the Exhibition last week, we omitted to name a fine "Heath Peach," from Dr. Brown, measuring 9¼ inches in circumference, and weighing 6¾ ozs. This is pretty well for a city garden.

FESTIVAL TOURNAMENT.

WE publish to-day, the additional premiums of the State Society, or rather those offered under the sanction of the Society, and call the particular attention of all parties to them.

The utmost order and decorum will be preserved, and we hope all who feel interested will immediately address the Corresponding Secretary and inform him if they please to take part, so that arrangements can be perfected:

SPECIAL PREMIUMS.

A Grand Festival Tournament.

The funds for these premiums are from private sources. No competitor will be allowed to enter the list without a card from a committee competent, to secure ladies from improper association.

LADIES IN SADDLE.

To the most accomplished Lady Rider, a Gold Watch and Chain	$100
Second best, a Saddle	50
Third do a Silver Cup	25
Fourth do a Riding Whip	10

GENTLEMEN IN SADDLE.

The most skillful Gentleman Rider, Silver Plate	$50
Second best do do do	25

SKILL WITH THE LASSO.

The most accomplished feats of Horsemanship with the Lasso, a Silver Cup	$50
Second best, a Cup	25

INDIAN SPORTS.

The most expert and skillful sports of the Indian, with bow and arrow—First Prize	$20
Second Prize	10

Fruits—Water Melon Trade of Yuba.

CALIFORNIA is beginning to be celebrated for her various kinds of fruits, and the *several sections* of the State will be celebrated for the different varieties, according to their soil and climate. Los Angeles has been and will be celebrated for her Vineyards. The Grape is peculiarly adapted to that climate and soil, and while it will thrive and do well in many other sections, that province will always be famous for the Vine. Santa Clara and San Jose produce magnificent Pears. Their soil and atmosphere—their humid soil made more so by their success in Artesian wells, will surely give them great advantage in the science Pomology. Sunoma and Napa will both produce Peaches, Apples, Pears and Figs; more particularly Peaches—there is a sure thing in the soil that will give them success. Sacramento can boast of success in the Peach and Strawberry, and a short time will bring the spirit of emulation into an active state, that will result in good.

But we have not yet said what we intended. Yuba county can boast in Watermelons. We give it up, and we believe all others would agree with us, if they could see what we have seen within the last three weeks. In a circuit of perhaps fifteen miles around the city of Marysville, there are more "melon patches" than in any other sections of the State—*patches*, did we say?—well they are patches, true, varying from four acres to *thirty*, and they gather from 50 to 500 melons from each per day. The trade in melons in Yuba county is immense. You cannot travel any road to the mines, even high up the Sierra Nevadas, that you do not either pass teams loaded with melons or meet teams on their way down for them. There is no trading post, no mining ground however distant, that is not now regularly supplied with delicious melons. And they pay well; about $40 per ton is paid at the gardens on the Yuba; from thence they are carried into the mountains. The melons average about 100 to a ton, they sell in the mountains for 75 cents to $1 each, and the teamsters after selling out, either load up with mountain lumber, or mountain snow, and thus make a handsome profit both ways. Briggs' Ranch, on the Yuba, about four miles out, we think has the largest and best melon ground in the county, and so conceded. C. Covillaud, Esq., has splendid melon grounds; the Quintay Ranch, also. W. W. Wickersham, Esq., on the Feather river, is also celebrated for melons. Benjamin Landis, Esq., the Cunningham Ranch, Zabriskie Ranch, and many others we might name have wonderful crops. The demand in the mining region is immense, and it requires nearly all the crop to supply it. This trade is a source of considerable wealth to the county. The markets are daily supplied in great quantities, and also with fair specimens of Musk, and Green Flesh melons of superior quality. Some of the finest White, Green, and Yellow Fleshed melons ever grown in the State were from seed introduced into California by J. M. Ramirez, Esq., and grown at the Quintay Ranch, by Capt. Pinnex. The first premium for melons in California we had the pleasure to award to Capt. Pinnex, of this ranch, and from our own observations we do not think Yuba county will yield the title to "Best Melons" very easily.

PREPARATIONS FOR THE STATE FAIR.—The full account of the doings of Yuba County will appear in our next. We are glad to know that a delegation of thirty-five gentlemen were appointed to attend the State Fair and take active part in the same.

A Visit to the Mines.

WHILE we were in the upper section of Yuba, and near the Gold Diggings, we were induced to examine some of the great works going on at Parks' Bar, Long's Bar, and Onsley's Bar. At the latter place, large tracts of land, of many acres wide and some 12, 15 and 20 feet deep, were being *sluiced off* into the Yuba river. The extent of earth can be but little conceived of, unless it be examined personally. These diggings are very prosperous. Hundreds of acres of valuable farming land, are being swept into the river every season.

At Long's Bar it is river washing, but great preparations are being made to wash down the hills.

A Parks' Bar, the immense fluming works of the Gold Channel Company, and others adjoining, are of the most wonderful character. The entire flow of the Yuba river, that floats steamers at Marysville, is compressed into a flume of twenty-one feet wide by three and one-half feet deep, and by this means the entire bed of the river will be cleared of its rich treasures the present season. In some places the flume is raised so you can pass under it—it seems a *river on stilts*. These great operations of fluming will be completed in a few weeks, when the washings will begin, and it is expected they will prove the richest yet found.

IMPORTANT TO "BETTY MARTIN."—The following note, in a handsome hand, came to us by mail, via San Francisco:

"—— County, August 6, 1855.

"MESSRS. EDITORS FARMER: Sirs—Please send me by private note, the *proper address* of Miss 'Betty Martin,' if you have the authority to do so, and oblige,

"One of your subscribers, * * *."

We have authority in all such cases, and we desire to act in good faith in all such matters. We have recently received several notes of this kind, and some from parties of both sexes; but in some instances, like "Rural Tom," we have not their real signatures, and if they should have a private note addressed them, we should not know where to send it. If our correspondents will all favor us with their real signatures, we will, in all good confidence, forward *private notes* both ways, and our lady correspondents can confide truly. If our correspondent whose name and place are purposely left blank will address Betty Martin, we will see it forwarded promptly; and if he fails then, we have no doubt there may be other "Betty Martins" he can find, and the columns of the FARMER are ever open to his wants. Ladies, shall our young friend go through the world desolate and lonely?

PARISIAN EXHIBITION.—This world's wonder does not seem to give the glory it was supposed would accrue from it. Prince Albert has won a second prize for a contribution of "Dorking Hens." The Emperor Napoleon has bought a cow for $500 that gave thirty quarts of milk per day, four months after calving. The stock show is not esteemed very extraordinary.

We annex *verbatim* from our French papers the following:

The English are much superior to us in pigs!

The pride of breeders led them to bring to the Exhibition, specimens of males so very fat that their essential breeding forms and qualities were absorbed or concealed by adipose riches quite useless, to say the least!

It is amusing to visit the Fine Art Exhibition on a five franc day. The managers having made up their minds that on these occasions the public will remain aloof, oblige their absence by doing up the various chores that have accumulated during the week. Pictures are re hung, and cases of new ones just arrived are unpacked and strewed about the floors. Men get in your way with ladders and ropes and hammers. The guardians, the police and firemen take the catalogue and look at the paintings. They give their opinions in quite a loud and authoritative way. Everybody seems to be off duty, and all the regulations would appear to be suspended. You are reminded of Monday at the Louvre, the cleansing and dusting day, when the public is not admitted. You may witness these operations at the Fine Arts for the reasonable sum of five francs.

THANKS! THANKS!—Our note book is so full and MSS. come piling in upon us so fast, we must ask some indulgence from our friends occasionally. Being now absent over the fields so much, we are under obligations of more than an ordinary character. We are under especial obligations to Messrs. Wells, Fargo & Co., while in the upper counties for many and repeated courtesies; their very obliging gentlemen at Marysville will please accept our thanks.

To Geo. G. Briggs, Esq., in the Marysville road, for many attentions while traveling and for feasts of melons and peaches, we will only say we know his generosity and appreciate it.

To the proprietors of Zabriskie's Hotel, and to the proprietors of Grove Hall, we express our kindest thanks, and wish them prosperity. And to our many friends at Marysville and vicinity, though we name them not, we "dinna forget." Their names upon our subscription list will weekly remind us of their kindness and otherwise.

To the Pacific Express Company for prompt delivery of letters and packages.

A Subject for Immigration Societies.

UNION CITY, August 6, 1855.

EDITORS FARMER: In your paper of July 27, I noticed an article headed "Light is Breaking," and the object of the writer is, if I understand it, to get up an Immigration Society for California, somewhat similar, I suppose, to the "Kansas" and "Nebraska Emigration Societies." All right. Now if you can get up a Society to assist an emigration to this country, it will be the making of it. There are many hard-working farmers in this Valley (San Jose) that have come here to make a fortune, and then go home to enjoy it; but failing in their calculations and being so taken up with the healthfulness of the climate and productiveness of the soil, they would gladly move their families here if they were able; and if they could look for aid to an Immigration Society, and get it, they would be willing, after getting started here, to join the society and aid others.

I traveled through Nebraska in '52, when coming to this country in search of gold. Not finding gold very plenty where I located (Clinton, near Volcano,) I came to Sacramento, after the big fire, to recruit my pockets by working at the carpenter's trade. I worked two weeks for Ayres (I believe is the name), on J street, and was then taken down with the diarrhœa, the first sickness I had after leaving home. Two Sabbath mornings I met a Mr. Bettis, a master builder, at Rev. Mr. Benton's (I think is the name) Church, and under the circumstances he advised me to go to San Jose Valley, to regain my health among the farmers, and recommended me to apply to John M. Horner. I did go, and immediately found employment, sorting potatoes, that then were worth ten cents a pound. This was the first of January, 1853. Of course it brought up all my old farming propensities, and I was bound to go to farming, instead of mining which I came to the country for.

Well Messrs. Editors, you know the result. My out-lay was big, and but little capital. The fall in price of wheat and potatoes left me in debt after a hard season's work. I have tried it again this season, hoping to recover, but the drought, rust, smut, and horse thieves have almost discouraged me, having had three out of my four horses stolen, on the 2d of May last. But still, I am not discouraged yet; California is not to blame for one man's bad luck. I have worked too much land. (300 acres.)

Now I want to get my family here and settle down for the remainder of my life, and work no more land than can be done scientifically. My family consists of a wife and ten children; the two oldest (boys) are here with me, one of whom is going home this fall to get married and come back in the spring; the other one, (who invented the potato-digging machine I told you of, and which will be brought into notice next season,) will go home next fall on the same errand—to make a visit, get a wife and come back. Now I am going home with the next steamer. (middle of August,) after the family—wife and eight children, five girls and three boys, whose ages range from four to nineteen years. Now after paying my debts all up here, I can hardly save enough to pay my fare. I have a *first rate* span of horses, and all the farming utensils necessary, in the hands of my son Henry—for me to go to work with when I come back. I want to be back in time to commence plowing for wheat, if possible.

Now, Messrs. Editors, my property in Michigan is worth about fifteen hundred dollars, and if I can sell it for that, I think I can bring my big family through, either by steamer or clipper—if they were all boys I could bring them in the steerage; but if I have to sell at a sacrifice, I will not be able to bring my family here. Now if an Immigration Society can come in to my assistance in New York, either by steamer or clipper, and help me through, I will bind myself, &c., to re-imburse all expenses, for the benefit of others. I don't know that I will want any help; but if I should, what shall do, as I am bound to get my family here if possible? You will say, sell that team and tools off; then I have nothing but *hope* to depend on. One can find friends as long as he has plenty of money.

I will just add, that there are many others in San Jose Valley, good and honest farmers, that would be glad to get their families here if they *could*, but have given up all hopes of doing so.

I happened accidentally to see the article "Light is Breaking," which called forth this letter.

Respectfully, yours, ABRAHAM CLARK.

N. B.—I refer you, for my character, to Able Chapin, commission merchant, near Clay street wharf, San Francisco; also to J. M. and Wm. Y. Horner, Capt. Beard, Rev. Mr. Brien, and others, Union City. A. C.

Having received the above letter, we publish it entire. There is something in it to the point, needed in the question of Immigration. It is a plain case; such are occurring all around us; and if we have erred in laying it before our readers with all the real names, the good we hope it may do must be our apology.

Hundreds and thousands of our hard working, unfortunate citizens need aid. They are worthy of it and should receive it, and that promptly too. Hundreds of families would be here, if there was the right spirit manifested in the system of immigration; but half of those who talk of aiding are political jugglers and the community have no faith in them. What is now wanted is an organization of business men, prosperous working men, those that are ready to [illegible] as well as say. Public meetings, and resolutions may look well, but if the resolutions are not carried out, of what avail are they?

The country is suffering for the want of an increased population, and many a husband and father is suffering for means to bring loved ones hither. Fires, floods, blight, rust, smut, and grasshoppers have each in turn blighted hopes and consumed the means which would have done this, and shall homes remain desolate because there is no public sympathy? God forbid. There is, there must be, a public heart, which can be reached, and it will be found boundless in its munificence, if rightly addressed. Separate benevolent works from political chicanery and political jugglery, and they must thrive and prosper.

The case of friend Clarke is worthy of notice, but as we said, there are hundreds if not thousands more; and we say, help them, help them, and the whole country will be the gainer—the individual giver will always find "it is more blessed to give than to receive." We commend this letter of Mr. Clark to all who are interested in the great question of immigration.—ED.

Agricultural Statistics.

SOMETIME ago (says the State Journal) we were enabled, through the politeness of H. J Biddleman, Esq., County Assessor, to lay before our readers the agricultural statistics of this county. By the kindness of Hon. S. H. Marlette, Surveyor General, we give our readers a condensed statement of the reports from three other counties, two of which, San Luis Obispo and Yolo, are strictly agricultural, the other, Plumas, almost entirely mining.

SAN LUIS OBISPO.—F. A. Pollard, Esq., Deputy Assessor of this county, reports 30,000 acres of agricultural, and 150,000 acres of grazing lands. The only timber is a small quantity of oak, pine and redwood.

The stock consists of 40,000 beef cattle, 1,000 milch cows, 200 work oxen, 3,000 horses, 200 mules, 50 asses, and 2,500 sheep.

Twenty-five acres are planted with fruit trees, and on three hundred wheat was grown. There are no vineyards. The produce the present year was 6,000 bushels of wheat; 2 000 (maize) corn; 3,000 barley; 2,500 beans; 5,000 potatoes; 4,000 lbs. wool; 2,000 lbs. butter; and 2,000 lbs. cheese. No hay is cut—the stock being grazed the year round. A large number of the sheep, it is reported, are never sheared.

The value of animals slaughtered during the year is set down at $15,000.

There are no internal improvements in the county, and no manufactories, except two flour, and one saw mill.

PLUMAS COUNTY.—Martin R. Streeter, Esq., Deputy Assessor, reports that almost the entire surface of this county may be classed as mineral lands. The "Feather River Meadows," and other smaller tracts, of a similar character—making a total of from four to five thousand acres—are classed as swamp lands. In regard to agricultural lands, Mr. Streeter says, that by far the greater proportion of the land in Plumas county is unsuited to tillage. The face of the county being extremely mountainous, and the summits of many of the hills covered with perpetual snow. Still, there are to be found many beautiful valleys, interspersed here and there, protected from the rigor of the climate and the violence of the storms by the wall of hills surrounding them. These valleys are covered with a luxurious growth of grass, and are available for tillage, and will undoubtedly become of great value.

The principal timber is pine, spruce and such other trees as are usually found on the higher mountains. There is a small proportion of oak.

The live stock of the county consists of 750 oxen and cows; 441 horses and mules; 1,000 hogs; and 65 asses.

The crops were, 5,765 bushels of wheat; 1,015 oats; 854 barley; 5 (maize) corn; 2,530 potatoes; 1,500 tons of hay; and 2,000 lbs. butter.

The manufactories consist of 11 saw mills, 6 quartz mills, and 1 flour mill running two pair of stones.

YOLO COUNTY.—D. P. Diggs, Esq., Assessor of this county, estimates its area at 370 000 acres. Of these, 150,000 are unsurpassed in the State for fertility—the average yield of the various kinds of grain being over forty bushels per acre. There are about 80,000 acres of tule or swamp lands, that are very fertile, and which can be reclaimed at a small expense. On the western side of the county towards the coast range, there are 120 000 acres of hilly and mountainous country, peculiarly adapted for grazing. The other 20,000 acres are unproductive.

No evidences of the existence of minerals have been discovered. Improvements and agricultural investments have been greatly retarded by the alleged existance of Spanish grants, and the consequent dispute about, and insecurity of titles. Another great trouble is the almost total absence of timber—most of the lumber used is brought from the Nevada mountains, some 75 to 100 miles distant. Common qualities cost about $40 per 1,000 feet. The county only produces scrub oaks, and dwarf cottonwood and pine.

There is not a bridge in the county, although they are greatly needed over the Tules and over Cache and Putah Creeks.

Mr. Diggs reports [illegible],000 acres of land fenced in. Of this quantity, about 4 [illegible] acres are cultivated, yielding in wheat 15[illegible] acres producing [illegible] bushels; barley, 2[illegible] acres producing [illegible] bushels; oats, 3[illegible] acres, producing 12 000 bushels; corn, (maize,) 300 acres, producing 9,000 bushels.

Six thousand tons of hay were cut, and 2,000 lbs. of wool sheared.

The stock consists of 6,000 horses; 23,000 cattle; 2,000 sheep; 35,000 hogs; and 14,000 poultry. The dairies produced 50,000 lbs. of butter and 10,000 lbs. of cheese. The poultry 200,000 dozen eggs.

There are two flour mills in the county, each of which turns out 3,000 barrels of flour per annum.

The statistics of these three counties, and those of Sacramento already published, show that during the year 1855, the aggregate production of grains in the counties of Plumas, Sacramento, San Luis Obispo, and Yolo, were 741,540 bushels of wheat, equal to 149,000 barrels of flour; 967,264 bushels of barley; 59,425 bushels of oats; and 17,205 bushels of maize, or Indian corn.

SUCCESS OF THE PUBLIC ARTESIAN WELL IN SAN JOSE.—The supply of water obtained in this well, at the depth of 235 feet, not being as great as the contract with the city required, the boring operations were continued. The Telegraph says: The pipe put down is seven inches in diameter, and for the purpose of securing the water already obtained, a six-inch diameter pipe was procured and let down to the depth of the stream first reached, the water from it flowing up within the space between the two pipes. This arranged, the operators proceeded to bore deeper with a six-inch auger, and on Monday morning, fifteen feet below the stream first reached, or 250 feet below the surface of the ground, struck a bold current of water, which sends up with tremendous velocity one of the largest, if not the very largest stream of water yet obtained in this valley from Artesian wells. The quantity discharged is ample, and more than ample for the supply of the population of a large city, and all the wants of the fire department. Already plans are talked of, and being formed, for carrying the water in aqueducts through the most populous parts of the city. The Council will doubtless take early action on the subject.

MINING ENTERPRISE.—A company has recently been formed with the view of supplying water in certain mining localities by means of artesian wells. The machinery for boring is now being constructed, and the theory upon which the company propose to work will be speedily tested. It is believed that by this new method water may be furnished in many localities at a trifling expense, compared with the enormous expense of digging canals. The machinery to be employed will be of sufficient power to bore through rock at any distance. This method will also furnish excellent facilities for prospecting the various strata of earth, and discovering the situation of that which will pay. If the experiment proves successful, it will establish an entirely new system of gold mining.—*Grass Valley Telegraph.*

MINING IN YUBA COUNTY.—The Independent and Columbia companies, on Park's Bar, got into the river last week. The former, with two toms, took out one hundred and forty-seven ounces, and the latter, with one tom, took out thirty-six ounces. This week they will do better. Some of the Parks' Bar companies will be in their claims during the present week, when we may expect to see a revival of old times.

MINING IN EL DORADO—*Big Strike.*—The Nevada Tunnel Company, of Cement Hill, did a "smashing business" last week in the way of developing the richness of their almost inexhaustible claims. They realized from the labor of eight hands some 400 ounces of the precious ore. This company consists of seventeen stockholders, making a dividend of about $100 to the share over and above all expenses.

CROPS.—A correspondent in Monterey writes: The return of wheat crops in this county for the year will not be more than half the ordinary crop, occasioned by drought and unseasonable rains. A great deal of the wheat is injured by shrivelling and some by rust; but a very good proportion will be good seed. Potatoes have done well—not much planted. Barley done well, generally, but not much planted. The grasshoppers have not injured the crops to any great extent, but the pastures have suffered considerably.

CALIFORNIA STAGE COMPANY.—The amount of stage travel to and from Marysville is beyond the conception of those not familiar with it. It is no uncommon thing to see from 6 to 12 coaches leave the Western Hotel in the morning at 7 o'clock, for the different routes up and down the river. They are splendid four and six horse Concord Coaches, and they do not go empty, either. We saw two coaches among a group, all full, and on these two were 36 passengers; 31 in a 6 horse coach, and 25 in a 4 horse, leaving for Sacramento last Wednesday. In the afternoon several came up with 16, 12, and one with 21 passengers.

THE Supreme Court has rendered an unanimous decision that no State Courts in this State, of a lower grade than District Courts, have a right to issue papers of naturalization.

IT is said that the Pacific Mail Steamship Company and the Nicaragua Company have [illegible] arrangements by which the weekly trips will [illegible].

PRESENTATION.—A [illegible] was [illegible] to Sheriff [illegible] last Tuesday evening by [illegible] North City Guards of San Francisco, by [illegible].

LATER FROM OREGON.—The Portland Times of the 4th inst., says: From present appearances it would seem that the Indians will not allow the Americans to work the newly discovered gold mines. Rumor has it that the Indians have plenty of arms and ammunition, and under present circumstances, it would seem unwise and imprudent for any one to go there without a stock of provisions, and armed to the teeth. Present indications are that a fight will come off as soon as the miners are strong enough, in case they are resisted. The only alternative, which at present seems left, is for the miners to fight their way into the mines, or return home without washing a pan of dirt. We have an idea, however, that wherever there is gold the Oregonians are bound to go and dig it, whoever may oppose them.

A correspondent of the Times, writing from "the Dalles," gives the following intelligence: Horses can be bought at this place, suitable for the trip, at prices ranging from $30 to $65.

Geo. Meeks, formerly mail carrier to Salt Lake, arrived here yesterday in fifteen days from Soda Springs. He reports only seven emigrant wagons on the road for Oregon, and about one hundred for California.

Rust has made its appearance and been very destructive to the wheat crop in Oregon, although in many places the crop is represented to be more than an average.

The weather has been unusually fine for the last week, and has given the farmers a good opportunity to gather in their crops of wheat.

REMOVING SNAGS.—The little steamer Gazelle, of the California Steam Navigation Company's line, says the Marysville Herald, has been fitted up expressly for snagging, with derricks, spars and rigging, which have proved adequate to remove large trees, that have for years been imbedded in the sand. The work on the Yuba river has occupied about two days, during which time the river has been cleared of two immense snags, which could probably have been removed in no other way. One of the snags, a sycamore, six feet in diameter, was taken out, root and branch, and carried to the banks of Feather river. The Yuba is now clear of snags; two more wing dams are wanted, which can be constructed at a slight expense, and the steamers can reach our landing without difficulty. It affords us pleasure to commend the interest taken by the steamboat companies and city authorities in the improvement of our navigation; this is a concert of action in the right direction, and argues well for the future.

AFFAIRS OF ADAMS & CO.—Several letters have been published, written immediately after the failure of Adams & Co., to Alvin Adams, the head of the house, by I. C. Woods, A. A. Cohen, and the attorneys employed by them. Mr. Cohen, in his letter, says the cash on hand was about $1,000,000. After he had been appointed Receiver, Mr. Cohen stated in court, the cash only amounted to $124,000. Here appears a discrepancy of over $800,000. Cohen left for New York on the 1st inst., and Woods is reported to have sailed, on the 11th, for Australia. The Chronicle asks: "Has there ever been a greater swindle in San Francisco, than that practiced in this affair of Adams & Co.?"

ARRIVAL OF IMMIGRANTS.—We are informed that several immigrant wagons arrived at Daingerfield's Ferry during the early part of this week, from the Plains, via Yreka. The party intended to come through by the Noble Pass, but got off the road and took the Yreka route. Not satisfied, we presume, with the looks of the country up in that direction, they turned the heads of their oxen southward, and have safely arrived in the valley of the Sacramento. Their arrival demonstrates the practicability of the proposed wagon road from the head of the Sacramento to Yreka; but whether the route is of such a nature as to render the transportation of goods over it profitable, is still a matter of doubt.—*Shasta Courier.*

EXCITING TIMES IN TUOLUMNE.—An extra Calaveras Chronicle, dated Aug. 13, 6 P. M. gives the following particulars of the pursuit of the perpetrators of the outrage at Rancheira, and the death of Mr. Phœnix, sheriff of Amador county: At El Salvado, a small camp about a mile from Chinese Camp, in Tuolumne county, whilst Sheriff Phœnix, Geo. Durham, Smith and McCormack were sitting in a large saloon, three Mexicans were observed to approach the back door. They were immediately recognized by Durham; they also recognizing the officers. Durham exclaimed to Phœnix, "There they are," when the officers immediately went towards them. Phœnix seized one, when some one cried out, "shoot him, do not try to take him." Upon this the Mexicans wheeled and ran behind a picket fence and commence firing—killing our friend Phœnix before he could reach him, the ball passing through his heart. Phœnix fired twice before he fell, one of his shots slightly wounding his assailant. Durham, Smith and McCormack, then shot the first Mexican who [illegible] by a shower of [illegible]—whilst Paul shot at another, who also [illegible]; the third man, with a revolver in each hand, taking [illegible] a shot. The second one was [illegible] dead but after he had passed, he arose [illegible] to the chaparral. [illegible] was [illegible] a shot, they [illegible] any more appearance. They and the [illegible] were [illegible] in search [illegible] and [illegible] [illegible] —and [illegible] [illegible] was found, [illegible] [illegible] [illegible]

State Agricultural Society,

OFFICIAL NOTICES.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtheranee of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstanees to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

O. C. WHEELER, Rec. Sec.

Sacramento, June 23d, 1855.

Agricultural Visiting Committee.

At a meeting of the Executive Committee of the State Agricultural Society, held this day, Gen. C. I. Hutchinson of Sacramento, Rev. A. H. Myers of Alameda, Hon. Sherman Day of Santa Clara, Hon. W. W. Stow of Santa Cruz, and Gen. Allen of Yuba, were elected a Committee for the examination of Farms, Orchards, Vineyards, Nurseries, &c., which may be entered for premiums at the ensuing Fair. Although the time for such entry has expired, yet the Committee is instructed to receive propositions for such entry until the 15th August, being *bound*, of course, to visit only those which may be within their range. Special pains, however, will be taken to answer all special requests. O. C. WHEELER, R. Sec.

State Agricultural Society's Rooms, July 27, 1855.

A Call

To every organized County Agricultural Society.

I AM instructed by the Executive Committee of the State Agricultural Society, to ask the earnest co-operation of every County organization, and to ask of the Corresponding Secretary of each such information of their several Societies as will make known to the Executive how much their Counties will do to further the interests of the Exhibition—what products, what stock and what manufactures may be expected from their several counties; and to solicit an active co-operation in this great work. It is also very desirable that special delegations should be appointed to attend the Fair and to act in convention, and thus aid in promoting and advancing all the great and important interests involved.

The Secretaries or other officers of each County are particularly desired to reply to the call at the earliest moment.

Per order of Executive Committee.

JAMES L. L. F. WARREN,
Corres. Sec. State Agricultural Society.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announciug to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co. have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanyiug the same.

Every thing of like liberality from our citizens in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

SACRAMENTO, July 5th, 1855.

MEMBERS TO THE STATE SOCIETY.—One of the plans to promote the usefulness of the State Society, is to aid them by the value of membership, and this is one of the sure ways to prove your interest and your wish for its success. Gentlemen who desire to give this evidence of their wishes, can call at the Rooms of the Society on Fourth street, between J and K, or address us, enclosing $10 by mail. This amount entitles them to all the privileges of a member, and they and their immediate families to an admittance to the Society's Exhibitions. We hope many will come forward, voluntarily, and enroll themselves.

Horticultural Department.

Curl of the Leaves of Peach Trees.

THIS affection, to which the tree is subject during the month of May, and by which it often loses all its first leaves, has been commonly attributed to the puncture of inseets, such as *aphides* and the *thrips*. It is, however, very doubtful whether these insects are the real cause of that diseased change in the texture and form of the leaf which is called the curl, because the insects in question are rarely seen on the affected leaves and never in such numbers as to suffieiently account for the extensive injury sustained. The surface of the leaves is swollen into irregolar and crisp tumors, often of a reddish and of a spongy texture, formed of thickened and sneculent cellular tissue. These tumefactions present some analogy to the warts of the plum tree, and may have a similar origin. The affection has has often been observed to follow a cold storm in May, whether connected therewith or not. If sudden cold and moisture have a tendency to check evaporation from the leaves, fluids will collect therein, and may thus bring about the changes by which they become blasted. It is confidently stated that soaping the limbs of the trees early in the spring, or washing them with a solution of sulphur and potash, will prevent them from suffering from the curl. Peach trees on plum stocks seem to be nearly exempt from this affection, perhaps because the supply of nourishment from the roots and the exhalations from the leaves are more nearly balanced in them; for the plum stock makes fewer or smaller roots than the peach on its own stock.—*T. W. Harris.*

Fruit Culture near Washington.

HENRY F. French, in one of his late letters to the New England Farmer, gives the following interesting account of the sueeessful eommeneement in the culture of fruit by Darius Claggett, (five miles from Washington city,) who has been thirty years a merchant, and who never saw a plow run until on his own farm. He employs mostly Irish laborers:

I have rarely seen a place which gave so decided evidence of good taste and good judgment and withal, of such persevering faith in our good mother earth, as this. Six years ago Mr. Claggett purchased three hundred acres of land, mostly covered with a small growth of yellow pine, entirely unimproved. In this short period of time he has cleared and put under the plow one hundred and fifty acres, a large part of which is covered with a choice variety of fruit trees of all descriptions that the climate will produce. His trees appear to be judiciously selected, carefully pruned and protected, and making a growth far beyond what I have ever seen at the north. He has already 2000 apple trees, 450 pears, 1600 peaches, 150 apricots and as many plums.

The apple trees are set forty feet apart, and the land among them planted with wheat in drills, with bare strips a few feet in width along the rows. They are making generally a better growth than we get in New Hampshire. I saw upon them marks of our old enemy, the borer, and far worse marks of the seventeen-year locusts of 1852. According to the theory, they will not be here again until 1869, by which time our friend will, it is hoped, have been paid by the fruit of his trees for all his labors. He said that when the locusts had possession of his trees, he could scrape from the body of a newly-set apple tree a pint of the insects at once! His pear trees, however, far excel his apples. Indeed, I have never seen so large a number of pears together, that appeared so healthy, and, as we say at home, so *thrifty* as these. I saw no sign of the sap-blight or winter-killing, but the trees seemed full of life, and many of them were full of fruit already set. The peach orchard is already set for a large crop. In 1853 Mr. C. sent to the market 700 baskets of peaches, and his crop this year will probably far exceed that quantity. He has this year in grass about 20 acres, in wheat about the same, in corn about forty acres, and in potatoes about 12 acres, besides large tracts of vegetables and small fruits, among the rest two acres of strawberries. He manures all his crops with Peruvian guano, 300 pounds to the acre, plowed in, and thinks this will insuro him abundant crops,

Grapes and Wine.

IN your paper of last July, I observed a valuable piece on the use of the grape as a food or medieine, which was too good to pass unnoticed.

The most eminent physicians, and men who have traveled in grape countries, agree with you. It is a common saying, that in wine countries there are but few drunkards. The writer in the Observer finds an exeeption in Paris. What less could be expected in a city like Paris? There is a wonderful difference between a man sitting under his own vine, eating the fruit and drinking the juice, and going to grog shops and other detestable places, and taking their wines and other detestable poisons.

Alcohol, whether or clear adulterated, tends to create unnatural thirst, till, like a poisoned rat, he drinks himself to death. The pure juice of the grape, or the fruit, tends directly the other way, and also to give strength and health and vigor to the system.

The grape is of the easiest culture, by slips cuttings, grafting, or transplanting from the swamps. There are in this region the best of table grapes, and the best of wine grapes of native growth; the former ripening in August, and being sweet, productive, and free from pulp. I suppose they may be found elsewhere. There are families in this place who have made and kept for years excellent wine for medical purposes, of fine flavor and color, and without adding alcohol, spirit, or coloring matter to the wine. There are two skilful physicians near by, who use this wine, and no other for medieine.

One of the greatest pleas for using intoxicating liquor is, the idea that our Savior used, directed it, &c. A very great mistake and absurdity. The wine he made was that which he distinguished by calling it the fruit of the vine. Pliny, who lived at the time of our Savior, says good wine was that which was destitute of spirit. Plutarch calls that wine best which is harmless, and that the most harmless which has the least strength, and that the most wholesome in which nothing has been added to the grape.

The Commissioner of Patents has had a bottle of exeellent wine presented to him, which, he says, has no intoxicating power. I apprehend no difficulty in making such wine, and having it improve by keeping. The grape can be kept the year round, and the juice pressed out when wanted. Every family, or physician, or church officer can make what is needful, and keep it in small quantities easier than in large, and know what they are using.—*Phineas Pratt, in Am. Agricul.*

The Weeping Willow.

THE following account of the introduction of the weeping willow (*Salix Babylonica*) into England, is communicated to the New England Farmer by R. H. Howard:

I presume that it is known to few that, for the weeping willows that hang their pensive boughs beautifully over the hallowed graves of the dead, England and America are indebted to the distinguished Lady Mary Montague. It is said that while at Constantinople, whose husband at that time occupied the embassy, she sent, in a basket of figs, home to her intimate friend, the poet Pope, a sprig of the Asiatic willow. He set it out in his garden, and from that twig has come all the weeping willows in England and America.

Lady Mary Montague was born about the year 1690, in Nottingbamshire, England; she was one of the finest and most accomplished scholars of her age; was cotemporary and on terms of intimacy with Hannah More, Addison, Pope, Steele, &c.; was the wife of the accomplished Charles Montague for nearly fifty years; at the court of George I. for some four years; resided upwards of twenty years in Italy and its neighborbood; lived to the advanced age of seventy-three, and died August 21, 1762.

To Lady Mary, also, it is said, belongs the honor of introducing inoculation for the small pox, a practice which has annually saved many lives.

KEEP FRUIT TREES STRAIGHT.—Trees in an open exposure often acquire a leaning position from the prevailing winds. This should not be suffered beyond a certain stage of the tree. When as large as one's wrist, they should be set up erect, and, indeed, thrown into the wind at an angle of ten or fifteen degrees; in order to bring them ultimately into a straight position. This is best done by obtaining crotched limbs from the woods, eight to twelve feet long, and placing the butt end, which should be sharpened, on the ground, and the crotch end either against the trunk, immediately beneath the branching point, or against a large outer limb, if more convenient, securing it from chafing in the crotch, by a padding of straw, or litter, and setting the tree at once up to the desired angle of elevation. Loosen, also, the ground on the windward side of the root so that it will not bind, and the work is accomplished. Let this be done when the tree begins to make its summer growth, or soon after leafing out. One season, if the tree is thrifty, will be all that is required. If, however, it be obstinate, repeat the trial another year. The remedy is sure. Even large trees, which have acquired a permadent lean, may be thrown into an erect posture, by loosening the earth at the root, and occasionally cutting off an obstinate large root, without injury to its growth, and thus be made sightly. An erect tree will be longer lived and more fruitful than a leaning one, and not half so subject to casualty as if left to its own guidance.—*Ex.*

The Cochineal.

THE Cochineal of commerce has the appearance of a seed or grain; and few persons who are unacquainted with the natural history of the article which is the principle ingredient in all our most brilliant dyes, would, on inspection, believe it to be a member of the animal, instead of the vegetable kingdom. But so it is, and millions of pounds of these minute insects are reared and sacrificed, made an important article of commerce, and sold in the various marts of the whole eilized world, in order to gratify the eye of man.

Two members of the lower animal creation play important parts in ministering to human luxury and pride, viz; the silk worm and the cochineal fly; the former in spinning the thread of all our most costly textile fabries, and the latter in giving them their brilliancy of hues, from the flaming scarlet, the brilliant orange, and the blushing crimson, to the delicate pink and the pale-tinted rose. All these colors, in their infinite variety of shade, as well as all others where a tinge of red enters as a component, are made from Cochineal.

The insect is obtained from Mexico, and the neighboring countries, and is raised on a tree of the Cactus family, on the juice of which it feeds. When the insects are properly matured, they are killed by pouring over them boiling water, or by roasting them on plates of iron. After being thoroughly dried, the insect is packed for the trade. Immense quantities of this dye-stuff are used, both in Europe and the United States, in silk and carpet manufactories.

The belle who, in a five hundred dollar shawl of Canton crape, promenades our streets, captivating the hearts, and turning the heads of fools and coxcombs by the magnificence of the display, does not, perhaps, know enough of natural history and the mechanic arts, to understand that all the costly paraphernalia is manufactured out of the shroud of a crawling worm, and died with the life of an immolated being.

Duties of Farmers as Citizens.

Extract from Dr. Reynolds' Lecture before the Concord Lyceum

To sustain the laws of the land and to preserve order and good government is obviously the duty of every citizen. But this is peculiarly the duty of the farmer. For the yeomanry of this country constitutes the main pillar upon which the fabric of our government rests. Without the sustaining hand of the sober, staid, enlightened and strong-minded yeomanry of our land, our government, left to the conflicting elements, that meet and struggle and battle in our cities and political arenas, would scarcely sustain itself a single year. It is the mighty voice of the yeomanry of the country that speaks with power and is heard above the raging billows of political strife. It is said that Paris is France and that the voice of France is but the echo of the voice of Paris. But, thank God, we have no Paris in America, and we have other voices than the voices of our great cities.

Now I do not counsel farmers to be politicians. They are better employed. But they should keep themselves informed, upon the topics of the day and upon the characters and opinions of the men who are in office and who are seeking it, that they may act understandingly and independently. Farmers should be public spirited. They should not consider their own little farms as all the world, but remember that others have interests at stake as well as themselves. They should ever be ready to contribute their part to support good government and to carry forward every laudable enterprise. There are often measures demanded by the public good that do not immediately put dollars in your purse, and yet they are important and necessary measures. They conduce to your comfort; they contribute to the dispatch of business; they facilitate intercourse; they tend to ornament the village in which you reside, and render it more respectable; they regard perhaps the preservation of good order and good morals in the community. You cannot afford to dispense with such measures and you should ever be ready to encourage and aid them, within reasonable limits. The proper way to accomplish such works is to take hold of them with you own hands and assist in planning and executing them. Farmers are apt to leave such matters to gentlemen of leisure, who are apt to be liberal and sometimes extravagant in their expenditures, and then complain, after the work is done, of the burden of taxation. The proper way is to give so much time as is necessary to all such matters, and let your voice be heard while the arrangements are being made.

This will generally remove all cause of complaint after they are finished. Farmers are apt to be too modest in the transaction of public affrairs, and to allow others, whose judgment is no better, and who have no more at stake than themselves, to assume the control of municipal business, merely because they can talk glibly and have boldness enough to put themselves forward. In this way farmers are often crowded out of those stations of respectability and honor, which they ought to occupy, and which they are better qualified to occupy than many who succeed in reaching them. Notwithstanding farmers constitute by far the most numerous class of citizens, yet most of the offices of honor and emolument are occupied by men from other classes. How rarely do you find the title of honorable prefixed to the name of the farmer! But you say this is because we are not office-seekers. Is it not rather because other men are office-seekers and you do not choose to compete with them?

Then do not complain that your position is not an honorable one and that your sons will not follow their father's business because it does not lead to honor and distinction. What is wanting at the present time is that the farmer should cultivate the soil in a more scientific manner; that his intellect should be as assidiously employed as his hands. And this intellectual activity will prepare him to comprehend and master the duties pertaining to any position in society in which he may be placed. Then when farmers are found filling many of the important and influential offices in the community, their business will appear more reputable in the eyes of their sons, and instead of seeking gold in the sierras of California, that they may enjoy the uncertain honor which results from wealth, they will be content to cultivate their paternal acres that they may in their turn fill the position of trust and dignity which, in the course of events, will devolve upon them. In this way the farmer's calling will be rendered honorable and he will occupy that position, as a citizen, to which he is entitled, and his interests will receive that attention, from the governments of the State and nation, which they merit.

They will not be laid on the table because no political capital can be made of them. But his voice, when it is heard in the public councils, will be regarded. His influence will be felt and will be felt for good, for he has no private interests to advance. His interests are identified with the public good, and he is ever ready to bear his share of the public burdens. In the public prosperity he prospers, and in the public joy he rejoices.

Miscellany.

[For the California Farmer.]

CALIFORNIA.

On the confines of Columbia's unmeasured waste,
By the mighty Pacific and Sierras encased,
Is a land which for ages was suffered to lay
As it was at creation's first opening day;
When the stars with delight all in harmony sang,
And legions of heaven to her parapets sprang,
As the ends of the earth here in union did meet
And the Maker of all saw his labors complete:
While, perhaps, it was here that He lingering stood,
To pronounce of his works—"they are all very good."
Here the Sabbath that followed was long undisturbed,
In which naught but the voices of Nature were heard:
While the quick salmon's plunge 'neath the cataracts roar,
And the high swelling tide, as it beat on the shore,
Formed an encircling choir, together to raise,
To their God and controller loud anthems of praise.
In this spot, hid from view and unknown to the world,
No peaceful arts entered, no war fangs were hurled;
But robed in the richness of Nature's bestowing,
Resplendent in beauty the country was glowing.
* * * * * *
But in half a decade, see what changes arise!
For "Eureka" has filled all the world with surprise:
It comes from a Switzer, as he holds in his hand,
Fresh drawn from the river, California's sand.
"I have wandered," he says, "from the land of my birth,
Far from home, from my friends—all I loved upon earth;
On the deserts been parched, o'er the billows been tossed;
Thanked the savage for food, as the mountains I crossed;
Been exposed to wild beasts, to the storms and the dew—
All that chequered the track of the Wandering Jew;
Till a land I have found that is richer in gold,
Than the mines of Peru, or the Ophir of old."
The effect of that word puzzles mortals to tell;
But I think more of good than of evil befell,
For the Saxons flood in, on the surf from the west,
And in torrents rush down, from the high mountain crest:
Like locusts to Egypt, from the east they come in,
All active and greedy, full of hustle and din.
Splendid cities they rear where the chaparral grew,
Unsurpassed by many, unequalled by few.
The farms of the country with its prolific soil,
Yield abundance to all, through the husbandman's toil.
It would tire me to tell all the blessings that flow
From opening the placers, but will say as I go,
That but five years have passed since the grizzlys did roam,
Where we hear "Betty" singing "There's no place like home."

'49

Death of a Son of the Author of Anastasius.

Paris, May 3, 1855.

A few weeks ago, Mr. William W. Hope, one of the sons of "Anastasius" Hope, died in his hotel of the Rue Saint Dominique Saint Germain, leaving the whole immense fortune, above $2,000,000, to a poor Englisbman, a distant relation vegetating at Dover on some hundred pounds a year. The will contained a few legacies, among them one to his mistress. He bequeathed her $100,000. This legacy was too intimately linked with the other provisions of the will for the heir to think of disturbing it, for, as you know, these mortuary commands are like Prince Rupert's drop in their intimate interdependence. But the woman had a pair of horses and a carriage in Mr. Hope's stable, (they lived maritally together,) alledged to have been given her by him, and which were shown to have been used by her constantly, by none but her, and to have been constantly at her orders. The heir brought suit to recover them, and they were worth one thousand dollars, at the outside.

Mr. Hope was one of the martyrs of the Midas martyrology. He fortunately was daunted to none of those "rich men's diseases," the gout and apoplexy, but he could not escape ennui, the curse of wealth. His only resources to kill time (and he had not much to kill—he died only 52 years old) was cards; he spent every season at Hamburg, sitting at its tapis vert, and leaving never less than $10,000, and in 1850, $25,000 to the bank. His stable was sold recently, and all his other personal effects are advertised as on sale. His hotel, with the exception of the hotels of the de Rothschilds, Lehon, Lauriston, M'lle Hottinguer's, (it is just completed, the building has cost a million of dollars) is the finest in Paris, and is most expensively decorated. He greatly enlarged it when he purchased it fifteen years ago from the Spanish government, who used it as their embassy. He lived their alone with his mistress, waited on by thirty servants, and having few visitors besides a well known card player, nicknamed le Bancal, who has the reputation of being the best card-player, not to be a Greek, possessed by Paris.

He made his fortune in Mexico at *monte* and the cockpit, and it is said Mr. Hope contributed $75,000 to his estate since first they commenced studying the Book of Kings together. The house he lives in is worth $1,000,000, for it has an immense garden, filled with an avenue of fine old lindens, as many fountains and statues as Versailles, and a splendid cascade. The furniture is in keeping with the hotel and grounds; it cost $400,000. The *salons* are *au premier* (our second floor) and can contain 3,000 guests; they are lavishingly, too lavishingly, adorned; the ceiling is most elaborately carved and gilt; they are lighted by twenty candelabras of jet bronze, each of which cost $3,000, and are filled with the rarest Japan and Chinese porcelain vases, some having cost $2,500 the pair; the staircase is not surpassed except at Versailles; one of the buffets contains a dessert service of Sevres china, gold and blue, which cost $12,000; the ante-chambers and smoking room are hung with old and superb leather, with gilt flowers. In a word, gold, mirrors, porcelain, and carving met the eye everywhere. The splendid suite of *salons* the master had not seen since 1848! He lived on the ground floor. In all this princely mansion there is but one chamber; it was on the ground floor, and decorated with western art and oriental luxury. It looked on the garden and into two greenhouses. Who is there in Paris that can afford to indulge himself with a house costing a rent of $60,000 annually?—*N. O. Picayune.*

Greatness of Little Things.

In Lieut. Maury's recent work on the Physical Geography of the Sea, he gives the result of microscopic examinations of some shells, drawn up from the bottom of the Atlantic Ocean, where it is more than two miles in depth. These shells are so minute that to the naked eye they appear like common dust or clay, although not a grain of sand is among them; and yet are so preserved that their most delicate edges are perfect. It would require a larger grave to hold all the coral insects of the world than all the elephants. The smallest tenants of the ocean, not the largest, are its most important occupants, and the microscopic shell fish create more important changes than the whales.

It has been the great error of historians, statesmen and politicians, to lose sight of this truth. They look only at the whales, the *big fish*, and seem to consider these as the monarchs of the deep sea of politics, and they alone have the right to swim there. If the French Emperor flounders, or the Russian Autocrat turns over on his side and dies, each contortion is duly chronicled. But, in the meantime, what do we hear of the progress of the people, the industrious classes, *the small fish?* They are the true monarchs of this great and wide sea of politics, after all. They form the strata by which the geologists of history will hereafter mark the progress of this age, and classify all its products; and upon the basis of which all future society will develop itself. Take care of the poor, and the rich will take care of themselves. Educate the masses, and there will arise from the number a sufficiently large class to generalize their ideas, and carry out their principles. Reform the people, and make them temperate, truthful amd virtuous, for they give tone and temper to the age, and to the country, determining the character of its leaders far more than the leaders of the masses.

And so in individual life and character. It is little things that make and unmake us all. There are thousands of young men of genius and enterprise, who dream of fame and distinction, and who, if it only required some one great act of daring or sacrifice within the scope of possibility, to become distinguished, would be heroes; but, because true eminence is only to be attained by a persevering application in a number of daily virtues, are constantly at war with the whole system of things, and esteem it a very badly governed world, in which they find no higher place.

It is a man's little habits of dress, demeanor and conversation, that make or unmake the friends on which his success and happiness in life depend. It is on a man's little habits of eating and drinking, of loitering over trifles, of knowing how to brush them aside, that his character for idleness or industry, and the occupation of the largest part of his time depend. It is the way in which a man takes care of his pennies that determines whether he will ever take care of pounds.

Little habits drive nails into our coffins. They more than make up by their number what they seem to lack in individual importance. They are the true seeds of character. We might as well plant acorns, and not expect them to grow, as cherish small vices, and not calculate on their increase; or as reasonably hope to see the firm and noble oak where no acorns we ever planted, as true greatness and success in life, where the seedlings of a thousand little habits of industry and virtue had not been first carefully cherished.

In a word, character is the sum of little things, rather than great ones. The true estimate of an individual is not ascertained by his accidental or occasional achievements, but by his every day habits. A nation's character is not determined by its famous men, but by the habits of its masses, and the character of the age by the vices or virtues that were so inherent as to be unnoticed.

Another Time Will Do as Well.

It is a common saying, that all the operations of nature go on regularly without delay. If we hear a farmer or mechanic repeating this saying, "that to-morrow will answer the purpose just as well as to-day," we may rely on it that such persons will never prosper in their business. The farmer that never thoroughly repairs his fences, till after his cattle have repeatedly trespassed upon his crops, or never has his plow or harrow ready for use, till after the proper time has passed, practically adopts the principle that another time is as good as the present. The patient that is confined to his bed by sickness, and neglects to call a physician till after the disease has become matured and threatens death, is another procrastinator, and advocate of the doctrine, that future time will be available to a present purpose and benefit. The student that neglects his books from day to day, and passes his time in indolence, expecting by future diligence in study, to be distinguished at the bar or in the councils of the nation, is practically following out the same absurd principle, and indulging similar vain anticipations. The man that neither plants his ground nor plows and sows in the proper season, because it is a little too hot or cold, a little too wet or dry, but fancies that another day, or week will answer as well, need not anticipate a bounteous harvest. In all the departments of business—in the cultivation of the soil, in the mechanic arts, in the successful prosecution of study, there is a proper time in which these employments are to be carried on; and if this time be neglected, no future period will answer as well. There is, in almost every kind of business, a *crisis* in which "time must be seized by the forelock," and the motto be, *now* or *never*. The farmer may, through indolence neglect to provide fuel for the winter, or to provide proper shelter and food for his cattle, or to repair in summer his fences and his houses; the consequences of course will be disastrous to himself. He must experience the ills resulting from his negligence and procrastination. If his house or barn needs repairing, the proper time to do it is in the summer. But as he is a procrastinator in everything, so he defers this work to the time of the autumnal rains, which beat into his chambers to the great injury of his furniture, or into his barn to the great detriment of his hay and grain. Frequently, also, in traveling you will notice the houses of some people with many panes of glass broken out; the consequence is, that much cold and discomfort are experienced within. But all this is the result of the absurd doctrine, that another time will do as well now. From this absurd principle there often arises a great want of proper economy, and good management in the affairs of a family. Some families are always behindhand in all their domestic matters. They are late to rise in the morning; the bright sun, as he looms up from the eastern horizon they never see. Long after he has shed his benign rays on hills and over valleys, they are still locked in slumbers. The breakfast is belated, the morning is wasted, the day is gone before its proper work is accomplished. Nothing of course is done in its proper season. Disorder reigns throughout the domestic concerns; and tardiness and negligence are visible in the management of the farm. There is no economy practiced within doors or without. The children are unprovided with shoes till after the snows of winter have come. The horses are not stabled till after they have suffered from the cold autumnal rains and frosts. A want of thrift is everywhere visible. Now all this arises from the fact that this family have got into the habit of not improving present time and opportunity, but deferring everything to the uncertainties of a future time. Many of the above remarks will apply with equal propriety to persons in other occupations of life.—*Senex, in Northern Farmer.*

The Desert of Sahara.—The Sahara is by no means the monotonous sea of sand which we commonly figure to ourselves. Its surface is varied by many natural features, but none of sufficient magnitude to constitute distinct districts. "The desert is habitable, *fiafi*, or uninhabitable, *kheta;* bushy, *haitia*, or wooded, *ghaba;* stony, *serir*, or covered with enormous rocks, *warr*. If it forms an elevated plateau, it is called *djebel*, in opposition to the maritime plain, *sahel*." But every where it has the same climate, the same absence of rain, the same fierce vicissitudes of heat and cold, the same fearful simoom, or *khamsin*, rendering life scarcely supportable in spring, until the violent etesians from the Mediterranean drive it back in summer and autumn, refreshing the desert with their cold, but powerless to bring with them their moisture, which remains precipitated on the summits of the Atlas.

The population is, of course, grouped in the "oases," around the scanty springs of water which here and there come to the surface. What reservoirs supply these slender, and yet never-failing sources, in a region where, on a surface nearly as large as Europe, no moisture whatever falls in ordinary seasons? The question is a curious one. Richardson is the only traveler (so far as we remember) who refers it to the extraordinary deluge of rain which falls in particular spots, at intervals often of nine and ten seasons. He mentions one case where such a phenomenon followed fifty rainless years, and which he conceives was sufficient to store the subterranean receptacles for the wants of another similar period.

The toils and dangers of Sahara traveling, and the strange phenomena of the desert, are familiar to us from many well-known narratives. A French author affects greatly to depreciate them, and to attribute much of the popular notions on this subject to the imagination of travelers.

Bees and their Habits.—Truly they are a wonderful people—perfect in architecture—bold in strategy—learned in the division of labor—exemplary in their affection for the young—and unselfish, some say foolish, in laboring not for themselves, but for others. With all their virtues, however, they are given to tippling, and many a bee who has left the hive, before noon, sober as a philosopher, has been found far away from home, late at eve, joyously tipsy, on his back, at the foot of a honeysuckle; or if that home be in a town, hopelessly drunk inside a cask of molasses. Nevertheless dissipation is not attended with oblivion of duty. The "fastest" of bees is ready when the proper call is heard, to attack invaders, to beat off winged highwaymen, to hermetically seal up what is offensive, to join in July in the annual massacre of the drones, or, in the terrible event of a Queen's decease, to create a new one by taking a vulgar individual, to whose tail is given an imposing aristocratic extension, and who becomes Queen by right of such divine fashioning.—*Treatise by Rev. J. Wood.*

Blanketing Cows.—A gentleman who has been traveling through Illinois says: great care is taken of their cows both in winter and in summer, and in a bleary wet day you will see the cows in the yard covered with blankets. Aye, even more ceremoniously than a horse is blanketed here in the winter. This care is well repaid by a greater flow of milk and a less consumption of forage.

The [illegible] was a wise [illegible] have a great reverence for virtue.—*Cicero.*

Ladies' Department.

[For the California Farmer.]

ACROSTIC.

Come, a messenger meets us so blythe and so glee,
All freighted with gems from the land and the sea
Loudly his presence how many do greet,
In the rich gilded mansion and lonely retreat;
For each weekly issue, as others before,
Only increases her beauty, her richness, and lore.
Roll on ye proud billows, her treasures convey,
Never fill her proud sails with political sway:
Increase her reception on each happy shore,
Aaa mandate of mercy, a guide to the poor;

For her treasures, ye authors and poets profound,
Are greatly increased by the farmers around:
Richly laden, like hives with the sweet honeyed store,
May success ever crown you on Pacific wide shore.
Ever one who would know who bears this rich mine,
Remember to read it *in the first of each line.*

Alice.

[For the California Farmer.]

Summer's Farewell.

It seems but yesterday, when taken in a retrospective view, that I heard the solemn knell of the parting year '54, with its many hopes, disappointments and fears. It was then winter: how quickly that passed. And then came those balmy days of opening Spring, with laughing looks and meandering streams, happily escaping their ice-bound fetters to gush down the mountain side and once more gain freedom in their serpentine course in the sleeping valley below. And then came, in rapid succession, Summer; and thou too art going. The music of thy departing sigh is upon the winds; the dark-leafed branches are waving a sad requiem, and the last bright-hued flowers are heavy and drooping with tears from sympathy for those delicate little flowers springing from the same stock where their predecessors for so many years "wasted their sweetness on the desert air." Earth's joyous ones are mourning that thy sweet flowers, fraught with golden hours, are so swiftly passing. And thou, oh glorious Summer! why shouldst thou joy to go when the bright majestic things of earth are fading! The world will soon mourn thy departure, with all thy sunny days; thy fragrant ones; with white-robed clouds mingling with gold, and azure; and holy stars, and gentle moonlight, shedding such peaceful calmness on weary hearts below; thy nights of soft repose and glorious dreams; thy mornings lifting the dusky veil and pouring heaven's radiant light o'er the awakening world; and thy gentle breezes and sweeping storms, and convoiced thunders and flashing lightning, and rushing winds, majesti in their swell: all these, with thee, sweet Summer are swiftly passing. Oh, how many are heard to exclaim: would that, like thee, I too could go, for thou hast taken all my brightest things, and I am left alone.

It seems but a few years since I lived at the foot of the Alleghanies and heard the baying of the old watch dog. Those low, mournful howls are still ringing in my ear, as in days gone by though that faithful friend of fidelity is dead, and the stone wall is torn down, and naught left save tortured Memory, who, with breeze-like voice sadly low, whispers of the past. It tells of sweet pale moonlight nights, when I have listened the gentle tones of cherished ones, and loving eyes gazed on mine; when Hope's glad breathings were in my young and guileless heart. And tells of olden mornings, when with my sweet little sister with happy bounding hearts and merry feet, wandering among old dim woods and flowing streams—'twas then that we listened to the bird's songs, and envied not their joyousness; for were we not happier? How we gathered the dewy roses, and with dark-leafed laurel wove shining wreaths deck the brows of our sweet little mates. And know, dear reader that you too can see, when the veil of memory is drawn aside, the sunny brow of your playmates, and hear the same sweet voices which even yet rings in your ear with

"A sound as sweet as fairy's feet, stepping on [illegible]

Can we forget them? No! for with more than human skill are they daguerreotyped on our hearts. But hopes that had birth with the sweet Summer, have perished, and cold and withered now they lie upon thy bosom like the dead upon the bosom of its mother dead! Other Summers will return, dear reader, and shed their beauty over earth, and other forms will frequent our old haunts, and other feet will tread the well known paths; but the friends and joys that passing with the Summer of '55, shall [illegible] again; for many a heart's Summer [illegible] Autumn the saddest and saddest of [illegible] coming on apace. But the trees of our [illegible] forests are ever green, and [illegible] and yellow leaf.

Raised Cake.—One [illegible] through the [illegible] of sugar, [illegible] spoonful of soda, one [illegible]

FROM THE EAST.

The Nicaragua steamship Uncle Sam, which arrived at San Francisco on Saturday afternoon last, made we believe the quickest passage yet, the time from New York being only 21 days and a few hours.

The harvest was progressing favorably, in some States the grain being nearly all secured. The crops are represented to be very abundant, and the price of flour had declined more than two dollars per barrel in New York.

The retail liquor trade in the city of New York is said to continue as brisk as ever. The country towns are closing up the liquor shops generally.

The United States officers who were some time ago dispatched to visit Sebastopol, have been received with great honors by Paschovitch, at Warsaw.

The Know Nothings of Louisiana have nominated Dr. Aubignay, a Catholic, for Governor.

Mill No. 1, of the corporation of Manchester, N. H., was partially burned on July 14th, by which 500 persons were thrown out of employment; loss $250,000 dollars. Another fire on same day destroyed 30 buildings; loss $100,000.

The opening of the Illinois Central Railroad to Dubuque was celebrated on July 18th. Several thousand people were present. Senators Douglass and Jones, and Mr. Dodge were the principal speakers.

Foreign.—Dates from London are to July 7, and from the Crimea to July 5. Lord Raglan died on June 29th, after a few days illness, from dysentery. Gen. Simpson, an old India officer, takes the command of the British forces in the Crimea, till Raglan's successor is appointed. The loss of the allies in the action of the 16th of June is said to have been heavier than at first reported. It is stated that the French had upwards of 5,000 men put *hors du combat*. The Mamelon, which was recaptured by the Russians, was again taken by the French. It is said that Gen. Pellissier's great haste to begin the assault before the projected bombardment of the 18th, was the main cause of the defeat. Nothing had been done on either side since the 18th June.

The English and French papers cunsider the Austrian alliance at an end, and a campaign on the Rhine, by Louis Napoleon, is anticipated.

Parliament has granted an annuity of £1,000 per annum to the widow of Lord Raglan, and £2,000 per annum to the successor of his title.

In consequence of a bill introduced into Parliament to prevent Sunday trading, a tremendous demonstration had been gotten up in Hyde Park on two consecutive Sundays, while the aristocracy were driving out. They were saluted by shouts of "Go to church," and the ladies were much frightened. 150,000 persons were assembled. One little lady was so much frightened that she held up her prayer book to show the mob she had been to church. The obnoxious bill was withdrawn.

A grand banquet was given by George Peabody, the American banker in London, to Millard Fillmore.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the California Farmer, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.

v3-26 C. I. HUTCHINSON, President.

☞ **Sands' Sarsaparilla.**—This preparation has now borne the test for over fourteen years' experience, since its first introduction to the public, and each succeeding year brings forward renewed testimony to its great value as a medicinal remedy. The unfortunate victim of hereditary disease, with swollen glands, contracted sinews, and bones half carious, has been restored to health ad vigor. The scrofulous patient, covered with ulcers, loathsome to himself and to his attendants, has been made whole. Hundreds of persons, who had groaned hopelessly for years under cutaneous and glandular disorders, chronic rheumatism, and many other complaints springing from a derangement of the secretive organs and the circulation, have been raised as it were from the rack of disease, and now, with regenerated constitutions, gladly testify to the efficacy of this inestimable preparation.

☞ WISTAR'S BALSAM OF WILD CHERRY not only cures every species of lung complaints but it exerts a very powerful influence on n Diseases Liver. In this complaint it has, undoubtedly, proved more efficacious than any remedy hitherto employed, and in numerous instances when patients had endured long and severe suffering from the disease, without receiving the least benefit from various remedies, and when mercury has been resorted to in vain, the use of this Balsam has restored the Liver to a healthy action, and in many instances effected Permanent Cures! After every known remedy had failed to produce this desired effect.

California Brooms.

"Encourage Home Manufactures."

THE undersigned are happy to announce to the community that they will offer to them about the 10th of August,

Three Thousand Dozen California Brooms.

These brooms are made from stock grown in California. The broom brush was raised in Sacramento county, (the queen of prairie land;) the handles from timber from our own mountains; and the work by our own citizens. We have, 'tis true, imported machinery for the manufacture of brooms; but hope ere long that the genius of California will produce machinery for all the departments of labor.

We shall have samples of our Brooms at the State Society's Rooms on Fourth street, and at our own store, when we trust our citizens will be happy to give preference to the home industry of California.

We shall commence immediately the work of manufacturing, and those who wish our brooms should send in their orders. They will be answered according to their date, as we expect sale as fast as we can manufacture them. We intend they shall be as good, if not the *best brooms* ever offered for sale in this State. LUSK & CO.,

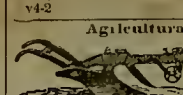
Received and for sale by

TREADWELL & CO.,

v3-13 corner California and Battery streets.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.



From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

Agricultural Tools and Seeds.

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets,.....MARYSVILLE.

☞ **Open all Night.** ☜

THIS supberb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.

v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of 2nd and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st1 C. M. DAVIS, Proprietor.

Wilson's Exchange,
By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. JAMES, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v3-25

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

American Hotel

NAPA CITY,.....CALIFORNIA.
L. A. & W. W. CHAPMAN, Proprietors.

MISCELLANEOUS.

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishes PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments continually being more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and brilliant picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has, after many experiments, brought his chemical preparations to perfection, using cones and entirely different tubes from anything ever before used in this city, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place,

☞ New Building, corner of Sacramento and Montgomery streets, one square from Montgomery street, between Austin's. v4 1

Removal.

[illegible]

San Francisco, May 1st, 1855.

Varieties

"What plan," said one actor to another, "shall I adopt to fill the house at my benefit?" "Invite your creditors," was the surly reply.

A little girl of four years had been brought up very properly with regard to correct speech. when one day looking at her doll's feet, she said, "Papa, I know that feets is proper, hut I do love to say little tooties."

A scheme is in agitation in London, for the formation of a road through that city, eight miles long. roofed in with glass, with houses and shops on each side. and beyond these, also on each side, two lines of rails, one above the other, the lower for trains stopping at every mile, the upper for expresses.

To Remove Ink Stains.—Tallow will remove most kinds of black ink from cotton or linen; it must be melted and thoroughly rubbed through. and heated into the ink spot, and then soap and hot water will usually remove all traces of ink with the grease; some kinds of ink, however, cannot be decomposed hy tallow.

It is stated in a London paper that the British ship Bruiser has been converted into a complete flour. mill, capahle of grinding from 700 to 800 hushels of wheat per day. The machinery is both ingenious and compact, and in moderate weather may he worked without suspending the progress of the vessel, notwithstanding it is all driven by the marine engine. The Ahundance has been fitted up as a large bakery, is capahle of turning out 20,000 pounds of hread per day, with the aid of some very simple machinery. These vessels will be dispatched to the Black Sea with all haste.

Two Yankees took lodgings for ahout ten days at a tavern in Lancaster county, and fared sumptuously. drinking two or three hottles of wine daily. The last day, and hefore they had paid their bill, a dispute arose ahout the speed of their horses—they at last agreed to enter on the "profitable contest." . The landlord was appointed judge, each being the rider of his own horse. When they were mounted, the judge, like those of the Olympic games, gave the word—one, two, three, and go. Off they went. and have neither been seen or heard of since; leaving the landlord fully compensated hy having had the honor to be their judge.

Credit, says Horace Greely, is one of the best things man has devised, and ahout the worst abused. Thousands live on credit who have no right to any such thing. None but an honest man ought to he able to pass his word instead of coin—a rogue's word is not worth its face, no matter how rich he may be. No one should have facility to run in debt for the means of ostentatious display, of sensual gratification, or of hazardous adventure. "Earn before you spend," should he the general rule, the credit should he extended mainly to those who use it to fit themselves with the means and implements of useful, productive labor.

SANDS' SARSAPARILLA.

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

In this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. Sands: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

H. & R. S. Havt, A. M. Trowbridge,
Geo. T. Dean, C. Eastwood.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William, New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle; six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m

NEW BOOKS.

C. M. SAXTON & CO.,
AGRICULTURAL BOOK PUBLISHERS.

C. M. SAXTON & CO., 152 Fulton street, New York, offer for sale the following late and valuable publications:

Downing's (A. J.) Landscape Gardening. A treatise on the theory and practice of land-scape gardening. Adapted to North America, with a view to the improvement of country residences, comprising historical notices and general principles of the art. Directions for laying out grounds and arranging plantations, the description and cultivation of hardy trees, decoration accompaniments to the house and ground, the formation of pieces of artificial water, flower gardens, etc., with remarks on rural architecture. Elegantly illustrated with a portrait of the author. By A. J. Downing. Price, $4.

The Practical Fruit, Flower and Kitchen Gardener's Companion, with a Calendar. By Patrick Neill, LL.D. Adapted to the United States, from the fourth edition, revised and improved by the author. Edited by G. Emerson, M.D. With notes and additions by R. G. Pardee, author of "Manual of the Strawberry Culture." With illustrations. Price, $1 25.

Munn's (R.) Practical Land-Drainer; being a treatise on draining land, in which the most approved systems of drainage are explained; with full directions for the cutting and making of drains, and with many illustrations. By B. Munn, Landscape Gardener. Price 60 cents.

Elliot's (F. R.) American Fruit-Grower's Guide in Orchard and Garden; being a compend of the history, modes of propagation, culture, &c., of fruit, trees and shrubs, with descriptions of nearly all the varieties of fruits cultivated in this country; and notes of their adaptation to localities, soils, and a complete list of fruits worthy of cultivation. By F. R. Elliot, Pomologist. Price, $1 50.

Dadd's (Geo. H.) American Cattle Doctor; containing the necessary information for preserving the health and curing the diseases of oxen, cows, sheep and swine, with a great variety of original receipts and valuable information in reference to farm and dairy management, whereby every man can be his own cattle doctor. By G. H. Dadd, M.D., Veterinary Practicioner. Price $1 25.

Norton's (John P.) Elements of Scientific Agriculture; or, The Connection between Science and the Art of Practical Farming. (Prize Essay of the New York State Agricultural Society.) By John P. Norton, M.A., Professor of Scientific Agriculture in Yale College. Adapted to the use of Schools. Price, 75 cents.

Johnston's (James F. W.) Catechism of Agricultural Chemistry and Geology. Adapted to the use of Schools. Price, 25 cents.

Johnston's (James F. W.) Elements of Agricultural Chemistry and Geology. With a complete analytical and alphabetical index, and an American preface. By Hon. Simon Brown. Price, $1 25.

Johnston's (James F. W.) Agricultural Chemistry. Lectures on application of chemistry and geology to agriculture. New edition, with an appendix, containing the author's experiments in practical agriculture. Price, $1 50.

Smith's (C. H. J.) Landscape Gardening, Parks and Pleasure Grounds. With practical notes on country residences, villas, public parks and gardens. By Charles H. J. Smith, Landscape Gardener and Garden Architect, &c. With notes and additions by Lewis F. Allen, author of "Rural Architecture," &c. Price, $1 50.

☞ The above books will be sent to California *free of postage.* v4-3 3t.

TOBACCO.

Virginia Manufactured Tobacco Agency.

GREENE, HEATH & ALLEN have removed from California street to the cor. of Washington and Battery streets where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call. Amongst the brands offered are the following:

200 boxes Crumpton's Four Aces;
75 half boxes do Medal;
50 packages do Sovereign of the Seas
60 do do Bride of the Pacific;
100 boxes Halsey's Four A's;
100 do Saunders' Harry of the West;
50 do James Boyd's Gold Leaf;
50 do do Anna Bishop;
25 do A. Thomas' Club House;
50 do Ferguson's Star of the West;
50 do Miller & Crenshaw's Bluff City;
20 do Royster's Mary's Own;
40 do do Invincible;
100 do Thornton's Cantelope;
50 do Dickinson's Witch's Eye;
50 do Crosby & Wootten's Metropolitan.

In addition to the above, we have 2,000 packages of ordinary brands; and as we sell exclusively on Commission for the Manufacturers of Virginia, we can furnish the trade with any quantity or quality required, at the lowest rates. v3-16

New Invention!
Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the California Farmer; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 26 Third street, South Beach, near South Park.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." Dr. Carswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

Dr. A. H. Macanair, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. Shaw, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

Samuel A. Walker, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

Hon. Samuel S. Perkins says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

This preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remitteut fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

Brooklyn, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. Sands—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of Indian Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEIER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m.

MISCELLANEOUS.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,
MARYSVILLE.
Corner of California and Battery streets, San Francisco.
No. 56 Federal street, Boston.

Importers of Hardware, Iron, Steel, Cordage, Paints, Oil Varnish and Window Glass, direct from the Atlantic States an Europe, with a complete assortment of tools and implements for *Farmers, Miners, Carpenters, Coopers, Caulkers and Gravers, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others.* v3-5

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)
157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at Collins & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city. v4-1 COLLINS & CO.

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of House Brokerage and General Directory, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands, from the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.
v3-18 WAINWRIGHT, RANDALL & CO.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

Directions.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on lightly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried [illegible] upwards, the piston pens with the [illegible] downwards.

Use good ink, free from sediment. Stanley & Field's American Fluid, also Bryan & Wilson's or Arnold's Fluid Ink, recommended to the public, [illegible] supply. v4-5

Notice.

NOTICE is hereby given to all persons interested, that the undersigned will apply to the Board of Supervisors of Sacramento county, at the 12 h day of June, 1855, if said board shall then be in session; if not, then on the first day thereafter that they shall be in session, for a renewal of his license to keep two ferries across the American river; one commonly known as "Hoyt's Ferry," near where 28th street of Sacramento City intersects said river; and the other commonly known as the "Middle or [illegible] Ferry," about two and one-half miles from said Sacramento City. SAMUEL NORRIS.

AGRICOLA'S LETTERS.—NO. 12.

On Rearing Young Calves.

EDITORS FARMER: The food taken into the animal system has got two principal duties to perform: to supply heat, (and fat, which, as we have seen, is formed from a superabundance of the material provided for that purpose,) and to furnish the constituents of flesh and blood, which in young animals are daily increasing, and in those of any age constantly undergoing change; and consequently require additional supplies to make up for the constant waste. On making an analysis of fat we find that it does not contain nitrogen, and, consequently, in stall-feeding for the butcher, food containing but a limited supply is wanted. But our principal object, in raising young stock, is the production of muscle, and no more prudent course can be taken than to follow the rule already suggested: "First to ascertain what it is made of, and then to supply the necessary materials in the animals' food."

Flesh and blood, according to Thomson, are composed of—

	Water.	Dry Animal Matter.
Muscular fibre,	77	23
Blood,	79	21

the constituents of the animal matter in both being the same, and in the same proportions; except that there is a little more ashes in blood, which evidently goes to supply the bones. Now, if we take the muscular or lean part of the flesh and wash it in a current of water, for a length of time, the blood, to which the red coloring is owing, will gradually disappear, and the muscle become perfectly white; in which state, with the exception of a little fat, it forms what is known to chemists under the name of *fibrin* or *fibrine*. When dried beef is burned it leaves about 4 1-2 per cent. of ashes, being equal to about 1 per cent of beef in its natural state—about two-thirds of which are phosphate of lime. Thus, to add 100 parts of the muscular part of a half-grown animal, there must be incorporated with its substance

Water	77 lbs.
Fibrine	22
Phosphate of lime	2 3
Other saline matters	1 3
	100

Fibrine is identical in composition with a vegetable extract called, in consequence, *vegetable fibrine*, as may be seen by a comparison of their analyses as made by Sherer, Jones, and Mulder—

	—Vegetable Fibrine from Wheat.— Sherer.	Jones.	—Animal Fibrine— Mulder.
Carbon	54 03	53 83	54.56
Hydrogen	7 02	7 02	6 90
Nitrogen	15 810	15.58	15.72
Oxygen, Sulphur, Phosphorus	23 185	23 56	22.82
	100 00	100 00	100.00

"How beautifully and admirably simple," says Liebig, "appears the process of nutrition in animals, the formation of their organs in which vitality chiefly resides! These vegetable principles, which, in animals, are used to form blood, contain the chief constituents of blood (fibrine and albumen) ready formed, as far as regards their composition. These elements doubtless exist in all vegetables eaten by cattle, but not always in such proportions; and it is this occasional defect—if we may so call it—which solicits the aid of chemistry, in ministering proper aliments, for animals under different circumstances, and assisting nature to carry out her intentions, when she is beset with difficulties otherwise too hard for her to contend with. If grass and grain contain all the requisites for feeding of animals, we must remember that for a long period of the year, we do not have grass in sufficient quantities to administer; and, when farmers live in the neighborhood of good markets, they generally find it more profitable to sell their grain than to give it largely to cattle. But, after all, it would frequently be the wisest thing they could do, especially during that portion of the year when grass is deficient; and, I have no doubt, such would be done to a considerable extent, if farmers were more generally aware that the cost of feeding growing animals properly, at that particular season, need not be so much, if prudently managed, as they may be inclined to suppose.

Let us take the following list, from Boussingault, of some of the more generally cultivated crops, showing the proportions of each containing the same amount of nitrogen, and see whether they may not, in proper conjunction, be procurable, at such a moderate cost, as would render them as cheap as any other food that could be used:

Wheaten Flour	100	Indian Corn	138
Wheat	167	Horse Beans	44
Barley Meal	119	Pease	67
Barley	130	Potatoes	613
Kidney Beans	56—57	Ditto (old)	894
White Cabbage	810	Carrots	75
Oats	117	Turnips	1335

Now, supposing that portion of their food, which consists of hay or straw, would have contained the elements of nutrition, nearly in the proportion in which they ought to be, if it had not been deprived of some of its most nourishing juices, by the process necessary to secure it in a fit state for preservation, in consequence it becomes necessary to supply, along with it, other food less woody in its character, if we would have our animals in a thriving condition. Let us see, therefore, how we can best make a selection from the list I have just quoted: Potatoes I have already more than once recommended as a food for cattle, especially in California, where they attain a larger size, and grow, when properly cultivated, in greater abundance than in any other country that we are acquainted with. But, as we have already seen, potatoes do not contain a sufficient quantity of nitrogen to supply the *ordinary waste* of animal tissue, without the addition of bean meal, or some such nitrogenous food, for that purpose; and how much less suited must they be as a food for growing animals for which we are more anxious to supply additional flesh than additional fat? Yet they need not be. All we have got to do is to let the proportion of meal given to young cattle be considerably greater, so that, when we take the analysis of the potato, and add the quantity of nitrogen contained in horse beans (which it will be observed is of all the grain crops the most abundant in that necessary constituent of animal flesh) we may have therein a sufficient quantity to render the carbonaceous portion of potatoes, which is not wanted for the production of fat and heat, with such an addition, the same in composition as the proteinaceous substance fibrine—which I have already referred to as being common to animal flesh and vegetables—at all events to supply a sufficient quantity for all the purposes for which it is wanted. For, as I quoted from Boussingault, in my last Letter, a "proper equivalent" must be preserved in feeding of animals. We must remember an attempt to make them grow without supplying them with food yielding the elements of nutrition, nor, which is worse, try to make them grow bigger, without providing them with food capable of preserving them in a moderate degree of obesity.

The evil effects of this latter attempt I have frequently witnessed in Scotland, in the feeding of calves. There, especially in spring, good fresh butter frequently brings so high a price, as to tempt the too thrifty housewife to rob the calves of the cream of their milk, by letting it stand some twelve hours for that purpose, and afterwards re-warming it for the poor calf, in expectation that it will not know the difference. But, if the thoughtless calf can thus be imposed on, Nature cannot; and dearly does the farmer generally pay for the petty temporary profit, thus procured by his PRUDENT help mate. The British Isles, from their insular position, are sooner visited by Spring than the Continent in the same latitude east of them; and the old remark, even in the extreme North of Scotland, that "March comes in with an adder's head and goes out with a peacock's tail," is in general perfectly correct; and the alternate "smiles and tears" of April have been too much talked about not to be well known on our own side of the Atlantic. But as the sun climbs the horizon, and the days get warmer, the air necessarily gets rarefied above those apparently favored Isles. Nature has been flattering them. The cold winds from the North-East come in with relentless bite, blasting the fabled beauties of May, which, however applicable to the sunny climate of Italy, but little apply to any portion of Great Britain. In the pastoral districts, the young of all descriptions of domestic animals suffer; and now is the time that the poor calf would have been benefitted by such a supply of fat as Nature intended it to have, but which it has been mercilessly deprived of, that that portion of its food which would have furnished it might gratify the pampered palates of those who had not intelligence enough to supply it with a proper substitute.

How beautiful! how benevolent are the arrangements of Nature! If God does not literally "temper the blast to the shorn lamb," he furnishes the young of all animals, in their mothers' milk, with a food so admirably fitted for all purposes of heat, nutrition, and fat, (which last is neither more nor less than a magazine of fuel, laid up in the system till wanted) that they, though young, are *tempered for the blast*, as well as provided with all that is necessary for their immediate comfort.

On scientifically examining Milk, it will be seen that it consists of two principal portions—that which goes to make butter, and that which goes to make cheese—and that the former supplies the calf with heat and fat, the latter with flesh, blood, and bones. If, therefore, we take away such a necessary portion of its aliment as cream, we must supply an equivalent. As Starch contains all the elements of fat, I do not know any more readily accessible substitute; besides the farmer may easily manufacture it for himself. Let him grate down, or properly mash, say, a bushel of raw potatoes, and then wash out all the starch with pure water, draining the pulp through a cloth. He will have ten or twelve pounds of farina, after drying it properly in the sun, which will be equivalent to as many pounds of butter. But to make certain, let him mix, along with their milk, this starch and an equal quantity of well-pounded oil-cake, adding a little salt, and, I will venture to say, if he administer this mixture in a proper quantity, that, after feeding them with their mothers' milk in its natural state, and with it alone, for one month, he may take the cream from the milk given to his calves with perfect impunity afterwards.

AGRICOLA.

P. S. I cannot allow the present opportunity to pass, without pointing out the [illegible] of the recipe for Cranberry sauce, quoted by yesterday's Sacramento Union, in the FARMER of the 10th inst., from the Knickerbocker. Anyone who [illegible] mended to the attention of Horticulturists by the Editors of that valuable periodical, as tested by experiment, and that recommended by myself as a natural inference from scientific investigation. Mr. Rason, the gentleman who made the experiment, employed the laboratory of Nature to manufacture sulphuric acid for him, but he used it as a preventive. I had to find a cure for an immediate evil, the case was urgent, and I proposed it ready-made. His mode of application, from its being done, at once, for a whole season, is more suited for trees, and is neat and ingenious. But if his succeed for trees, I do not see why mine should not do so for common vegetables. A.

ERRATUM.—In Letter No. 10, for "The 'chyle' or fluid absorbed from the blood contains that portion of the food," read "The 'chyle' or fluid absorbed from the food contains that portion of it," &c.

Gapes in Chickens.

MR. MINER: I send you a small instrument, which I used with great success in curing gapes in chickens. Early last spring a number of my young Shanghaes, were raised without being affected with gapes, in a yard where other chickens were nearly all destroyed by that disease. My preventive was to put two or three drops of spirits of turpentine in their water every time it was renewed.

In passing through my yard in the month of August, I noticed a brood of cross-breed Brahma and Shanghae chicks, about three or four weeks old, gaping badly. The girl who fed them told me that they had been badly affected for several days, and two had died that morning. There were sixteen in the brood. I had tried the feather and spirits of turpentine sometime before, and killed two by injury to the wind-pipe, as I supposed. I went to the house and got a piece of whale-bone, and I had the brood, fourteen in number caught, and I set them on my knee, opened their mouths, stretched their necks, pulled out their tongues, gave the tongue to an assistant to hold, moistened the sponge thoroughly with spirits of turpentine, and passed the sponge down its wind-pipe the full length of its neck to where I supposed it came to the upper portion of its lungs. I then drew out the sponge, turning it as I drew it, (holding the chicken firmly,) and I drew out many worms, and many others were coughed up, and every chicken recovered in a few days, although some of them wheezed a little for a few days. I suppose this cure was effected in consequence of using turpentine. Since then I have used the same remedy on eleven of another brood that were badly affected. Let me assure you that the sponge thoroughly saturated with spirits of turpentine, is perfectly safe, not in the least degree injuring the chicken, and a most perfect cure, and in skillful hands it is quickly done. —*A. P. Wylie, M. D.*

REMARKS.—The instrument sent to us by Dr. Wylie is a small round whale-bone, not larger than an ordinary knitting-needle at the large end, and tapering to half that size at the other end. It is about four inches long. On the small end is a thin piece of a sponge, a half an inch long, encircling the whale bone, and fastened with a very fine cambric thread. The circumference of the portion of bone, *with the sponge attached* is no larger than the largest end of the bone. We are thus particular in order to have our readers *fully* understand how to make such an instrument.—*Ed. Northern Farmer.*

GAIN OF TIME.—The difference between rising every morning at six instead of eight o'clock, in the course of forty years, amounts to 29,500 hours, or three years, 121 days and 16 hours, which is eight hours a day for exactly nineteen years; so that rising at six will be the same as if ten years of life were added, wherein we may be made every hours of every day for the cultivation of our minds and [illegible] of [illegible].

WORTH TRYING.—A French chemist asserts, that if tea be [illegible] like coffee before hot water is poured upon it it will yield nearly double the amount of its extractive [illegible]. Another writer says: "If you put a piece of lump sugar, the size of a walnut, into a tea-pot you will make the infusion half the time. This I have tried and find it so."

TO CLEAN OIL-PAINT.—[illegible] for cleaning [illegible] a sponge in [illegible], and [illegible] the [illegible] and [illegible] and [illegible] the paint [illegible] and [illegible] the [illegible] and [illegible] the [illegible] and [illegible] the

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, AUGUST 24, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Does it Pay?

How often do we hear this ejaculation emanating from those who in many of the occupations of life are in the most commanding positions; positions, where by their influence they sway hundreds and thousands. Yet while they are good and honorable men their whole aim seems to be to acquire *wealth*, and all the energies of both body and mind are given to this pursuit, as if its attainment was the very zenith of all their aspirations, and the securing of this wealth was the "open Sesame" to the road of happiness.

The merchant, as he unrolls the long invoices that his correspondents or agents have shipped him; as he looks over the various articles enumerated upon the list, rarely thinks of the benefit he may be conferring upon the city or State by the introduction of some new commodity. In his eye and on his mind are written and stamped these three words—*will it pay?*

The manufacturer, as he erects his mill and looks over the complicated machinery, as the polished wheels and cranks meet his eye, studies and thinks; and when the work is done, and he sees the noble building with its granite foundation, and the machinery moving with velocity and in perfect order—for a moment a groan arises in his heart, a voice whispers "'tis a noble work, it is an honor to the State, it will give employment to thousands;" but the bright and beautiful thought is quickly gone, as the intruding question comes—"will it pay?"

The shipowner, too, as he sees his beautiful palace on the deep, floating away with a freight of the rich products of the earth, his swelling heart says "she is a noble ship," she is worthy those world-honored "stars and stripes" that float so proudly in the breeze—he for a moment remembers she bears from her mast-head to her keelson living evidences of American enterprise and industry. The proud ship, by her beautiful model, her speed on the ocean, her workmanship in every department, is indeed the boast of our country's genius. And when her owner remembers that she bears across the ocean the products of his own country, the very labor of her citizens, he feels a thrill of pleasure, as for a moment his name may be identified with this great work of progress. But a moment more and the whispering voice comes—"will it pay?"—and the bright vision is forgotten.

The cultivator of the soil plows, and plants, and builds his barns and granaries; he fences his land buys horses and cattle; he sets out his vineyards and orchards; and then he plans his "home" and gathers his loved ones around him. The fields of waving grain cast a golden halo around that home; the grass is soft as a carpet under his feet; the vines bend down their loaded branches with tempting, luscious fruit; the fig tree turns its purple cheek to him from its deep green foliage; and the crimsoned peach cloys him with its fulness. His granaries burst out with their overloaded weight, and his wine presses gush over with new wine; and as he gazes upon this, as he looks upon all these glorious evidences of earth's bounteousness, he sees that it is indeed "full of glory." Then he may call all his household around him and point out these evidences of God's bounty here in this favored land, and they too may see and feel it is so; but, alas! how soon shall he whose mind is occupied with other matters, refrain from such thoughts, and in a moment he asks—"will it pay?"

Alas! how often are the most sublime efforts of genius crippled by a knowledge that few only will aid in advancing such efforts, unless "it will pay!" unless it will pay in a visible and tangible return of dollars and cents. Artists of all grades in life have felt and mourned this bowing down to the "golden calf;" and although nation after nation has arisen and read of the consequences of this worship, ever since the days of Moses; although they have been bitten by the serpent and live, a few only have the will to look forward to that far distant day, when the recollections of good acts and deeds shall come up in sweet remembrance, and separated from all the base alloy of [illegible]-judging and mistaken crowd of world [illegible]pers, the nature of all actions shall be m[illegible]nown and the value established. Then, as the scroll is unrolled, every one will know as they review their former judgments—they will find answers to the question, "does it pay?"

We have been led to these thoughts by the reception of the following letter from one of our most valued correspondents in the East; from a gentleman long connected with the science of agriculture and horticulture, in fact with all the scientific institutions of which Salem can so proudly boast. This gentleman we had in our mind's eye as the thought flashed upon our mind in the words with which we open our editorial—"does it pay?" This gentleman, Dr. Wheatland, has always found his devotion for science to *pay;* aye in the highest sense of the word, Not as the world means, however, for that was not uppermost in his mind; but in his labor and devotion he has asked himself, "will it not advance science, will it benefit my fellow men, will it add to the happiness and prosperity of my country at home and to her honor abroad." These questions were answered in the affirmative, and his own heart would say, quickly, "this does pay."

We love and honor such men, and are happy to know that Salem has so many able men to aid in her scientific institutions, and we hope to see such institutions in California.

For the kind expressions tendered in the annexed letter, for the assurances of aid from such a source, for the approbation of such men, we are proud. The little we may have done, or the little we may ever do in advancing the cause of science, shall be most willingly done; and to our kind friend the Doctor, and to our other kind friend Professor Russell, we tender our highest regards, and our earnest assurance that their wishes shall be ever in our minds. However great the labor, or severe the toil, we may be called upon to advance, should we be inquired of by some world-wise lover of gold, "does it pay," we will say, the approbation of good and true men, and the perusal of such letters as the annexed, will answer "it will pay." Though our body may be weary, and our spirit faint, and our purse minus of the shining gold, if we have been instrumental in the happiness or prosperity of others, *we have not labored in vain.*

SALEM, Mass., July 5, 1855.

MESSRS. WARREN & SON—Dear Sirs: Your esteemed favor by Mr. W. R. Waters, we received yesterday, and in fine order. The specimens of agricultural seeds do great credit to the virgin soil of California, and exhibit the success of enlightened cultivation. We have added them to our series of grains and shall value them much. Brief though the notice of Mr. W.'s departure for "our New England" was to you, we think you were very happy in remembrance of our wants. The minerals, also, were of much value to us, and one was of much beauty besides (a piece of lignite with brilliant pyrites.) Your former acquaintance, Prof. Jno. L. Russell, was gratified at the sight of the Seeds of the Mammoth Tree, and thanks you in the name of Botanical Science for the same. He would be very glad to add to the Institute's collection *any* native seeds, especially in the *seed vessels*, acorns, pines cones, &c., if large. one, or at most five or six in number. each kind. Also, if you have any botanist who is a collector of the *mosses* and *lichens* of your glorious region, far famed for vegetation, these inconspicuous plants would be most desirable.

Mr. R. assures me that he hopes to be able to procure a few seeds of the Victoria Regia in a few weeks, which we shall duly transmit. Mr. Allen's plant has as yet produced but a single capsule of mature seeds, and this only a very few. It probably will be more prolific in future.

With assurances of our regards and wishes for your success in advancing the benefits of an elevated and enlightened agriculture in its every department of science and art,

We remain, very truly yours,

HENRY WHEATLAND, Sec'y.

The Turf, of California.

CALIFORNIA is destined to create some excitement in the world, by the attention which is now given to the preparations for having within her borders the finest horses in the world.

We mentioned some time since the importation of a very *valuable entire Horse* by A. J. Easton, Esq., of San Francisco. We were invited by Mr. E., a few days since, to see this noble animal, and were kindly driven out to the stable near the Laguna, on the Presidio road, for this purpose. Having seen and examined this beautiful animal, —having made a thorough inquiry and examined the certificates of his pedigree—having learned all the necessary details, we are now prepared to speak of the animal, and what we saw. All we need say or do will be to publish, from authentic documents, the history of the animal. This will convince any one that we have now in California one of the finest and most valuable entire horses in the United States.

Mr. Easton has erected a very neat and handsome brick stable, with yard attached, for the special convenience of this horse. The animal was led out by B. F. Fish, Esq., proprietor of the "Black Hawk Stable." on Kearny street, who has the charge and training of this animal. At the word, the horse was loosed from his halter, and by the *voice of his keeper* was led into the yard, guided and directed by the *voice alone.* We watched his movements, we saw him in every position, and although we have seen thousands, we have rarely seen so beautiful an animal. This splendid Horse is now known as the

MORGAN HORSE (BLACK HAWK) "DAVID HILL."

His speaking eye, his beautifully curved neck, his firm muscle, his perfect points, give, with his graceful action as he moves before you, convincing proof that he is not only beautiful, but a faultless animal.

We now append to our statement the following certificates and descriptions, which are from authentic sources, as will be seen by the names attached; and we feel that great credit is due Mr. Easton, for the public spirit he has manifested in thus introducing into California one of the finest animals now in the United States. We commence with a history of the "Morgan Horse:"

THE ORIGINAL MORGAN HORSE,

Known as "Justin Morgan," was sired by "True Britton," formerly owned by Gen. Delancy, commander of the Refugee Troops, and rode by him in the Revolution; the latter horse was sired by the imported horse "Traveler." The dam of Justin Morgan, was sired by "Dimond"; he by the Church Horse, and he by the imported horse "Wild Air." The last named was the sire of much valuable stock; he was imported by Gen. Delancy, in 1761, and after being used as a stallion in this country, was reshipped to England in 1773. Wild Air was the property, previous to coming to this country, of Lord Wm. Swinbourn, and was sired in 1753, by "Old Code," son of Godolphin *Arabim*, his dam by "Steady," son of Flying Childers.

Justin Morgan was folded at West Springfield, Mass., in 1793, and brought to Randolph, Vt., by Justin Morgan, from whom he derives his name. An emigrant from the former place in the summer or fall of 1795, Mr. Morgan broke the colt and owned him up to the time of his death, which took place in March, 1798. Of the progeny of Justin Morgan—the most famous stallion of his sire was the Sherman Morgan, out of an English blood mare; and he left numerous and valuable stock throughout the eastern part of Vermont and New Hampshire, where he was kept the greater portion of his active life—he died in 1835.

STOCK OF THE ORIGINAL BLACK HAWK, SIRE OF THE PRESENT "DAVID HILL."

The most celebrated of all the descendants, is Black Hawk David Hill, the fifth of the celebrated racers of that name, and now owned by Mr. David Hill, of Bridgeport, Vt. The dam of Black Hawk was a 3-4 blooded English mare, raised in the province of New Brunswick. She could trot a mile in less than three minutes, and was in every respect a superior animal. Black Hawk is the sire of more valuable stock that is in active and present use, than any other living horse; as in one instance, at a State Fair, East, his progeny reached a half mile in length, with the old horse at their head, varying in years to a nursing foal. That sight hundreds can attest to, and one, no less than our distinguished citizen General Wool.

A wager has been offered, that horses can be produced from his progeny, in three States—Massachusetts, New York, and Vermont—as follows: One hundred that can beat 3 minutes; ten that can beat 2.40; five that can beat 2.35; twenty-two that can beat 2,30; and one that can beat any horse in the world for $10,000, or more, which is a public challenge.

BLACK HAWK DAVID HILL,

Was sired June 9, 1849—is a jet black, measures 15 1-2 hands high, and weighs one thousand and one hundred pounds. At two years old he was awarded the first premium at the Addison County Fair, Vt., and at three years old received the first premium at the same Fair, also at the New York State Fair, held at Saratoga, received the first premium, and at the National Fair held at Springfield, Mass., received the first premium and a diploma. Again at Brattleboro', Vt., he received the first premium. When four years old, having been driven but little previously, he trotted a mile upon a half mile track in two fifty.

David Hill was bought from the stable of the owner of Black Hawk, and derived his name from him, who intended that David should take the Old Black Hawk's place, as he is now quite advanced in years; but as David was to come to California, he consented to advise the disposal of him by his son and Mr. Burchard who owned him, for the sum of $5,000. Mr. B. F. Fish was commissioned by Mr. Easton to obtain him. He arrived here on the 14th of April last; since that time David Hill has served over thirty mares. He is warranted to go in training in 2.40. They only showed 2.50. No horse feels himself, till he has been in this country a year or more, therefore no one can tell what his speed may be. Great speed is anticipated, from the following recommendations which have been given, as the men are known to be judges, and the owners of Ethan Allen *challenge the world.*

The following well known names were forwarded as a guarantee recommendation of "DAVID HILL":

We take great pleasure in recommending to your notice the beautiful young stallion David Hill, purchased by Mr. B. F. Fish, with a view to the improvement of the stock of horses in the State of California. That he will get fast trotting stock there can be no doubt. Among the trotting horses now upon the track, sired by Black Hawk, are: Black Ralph, Black Hawk Maid, Know Nothing, Eathan Allen, Bell of Saratoga, and many others. We have seen some of the stock sired by Black Hawk David Hill, and it promises well. (signed)

DAVID HILL, owner of original Black Hawk.
O. S. ROWE, owner of Eathan Allen.
EDGAR HILL, owner of Black Hawk Chief.

CERTIFICATE FROM THE OWNER OF DAVID HILL.

This is to certify that the young stallion David Hill is five years old this spring; was raised by Oliver Russell, of Shorham, Vt.; was sired by my horse Black Hawk, and in my opinion is as good a colt as any of his getting.

(signed) DAVID HILL, owner of Black Hawk.
Bridport, Vt., March 10, 1855.

Weekly Accounts of Fruits Exhibited AT THE SOCIETY'S ROOMS.

THREE Bartlet Pears—largest, long circumference 11 inches, short circumference 9 1-2 inches, weight 10 ounces. Two Native Pears—largest, long circumference 8 inches, short circumference 7 1-2 inches, the two weighing 12 ounces. Two Native Pears (gigantic)—largest, short circumference 9 1-2 inches, long circumference 11 inches, weight of the two 13 ounces. One Seedling Cling Peach, from fair to middling. The above are creditable to the growers, indeed deserve high commendation, and are from the Ranch of Milton Wolfskill, Esq., on Puto.

The following splendid Pear is from the Ranch of William Wolfskill, Esq., of Los Angeles: Native Pear—long circumference 12 inches, short circumference 11 inches, weight one pound,

The following splendid Peaches are from the well known Pomological Gardens of A. P. Smith, Esq., near Sacramento: Two specimens of Mixon Cling—largest, short circumference 9 3-8, long circumference 9 7-8 inches, weight 8 ounces. Crawford's Late (Free Stone)—largest, long circumference 10 1-2 inches, short circumference 10 3-4 inches, weight 10 1-2 ounces. One bunch of Royal Muscadine white Grapes. Too much cannot be said in commendation of these splendid fruits.

From Messrs. Fern & Hooker, on the Sacramento river—one large Muskmelon, weght 14 pounds, measuring, short circumference, 37 inches. Also two Cantelopes of large size and fine artistic proportions, and of same varieties. These melons are creditable to the growers.

THE following was prepared for last week's paper, but by mistake was overlooked:

By Messrs. Wheeler & Brooks, Nurserymen, Sacramento—a fine Tomato, weighing 1 lb. 2 ozs.; a dish of Cucumbers, one weighing 3 1-2 lbs. and a foot long; two fine seedling Nectarines.

By Dr. B. B. Brown, Sacramento—specimens of Rhubarb and of Spanish Leek, the latter very full grown and in seed; also one Bouquet, neat and pretty.

By Michael Gregory, Gregory Ranch—specimens of Garlic.

By Thomas Brooks, of Wheeler & Brooks—Sacramento—specimens of so-called California Notmeg (the evergreen of the Pinus tribe;) also clusters of pretty mountain shrub (in the seed pod.)

From Smith's Pomological Gardens, Sacramento—a dish of four Peaches; one Old Mixon Cling, weighing *half a pound;* three of George IV.—all very fine. Had it not been for the havoc made by the grasshoppers, these gardens would have produced the finest exhibitions of fruit this season.

By Albert Frazee, N street, between Fifth and Sixth—a cluster of 22 Tomatoes, weighing 5 lbs., worthy of exhibition.

By Samuel Patrick—Thorns of the Cactus, in shape like a fish hook; taken from the plant in '49, on the Gila River.

SPECIMENS FROM QUINTAY RANCH.

QUINTAY RANCH, Aug. 16.

COL. WARREN: With this you will receive a box containing a few things which I think will be of some interest to your society, viz:

A new Melon raised by me, from three seeds sent me from Hamburgh; name, Black Dutch. There are eight others on the same vine, of equal size, but not yet ripe, and numberless small ones.

Three Cucumbers, from seed brought by a friend from Chatsworth. They are very prolific, and although growing to such a large size, of most delicate flavor.

A jar with three Peaches—largest measuring 10 inches by 9 3-4; smallest 9 3-4 inches by 9 1-2. The three weighed 24 1-2 ounces. I should have sent you a dozen, but could not get a large glass jar. However, you saw them growing, and know what they are. There were three hundred on the tree, and not one less than 7 1-2 inches, and most of them 8 to 9 inches.

A bunch of what you called the China Yard Bean. I received it from Central America. I have but two vines, and there are upwards of fifty pods on each, and still in blossom.

A package of twenty-six different kinds of

Melon Seeds, raised by me last year, from the choicest seeds procurable in Europe; some of the kinds are excellent. I should like these seeds to be intrusted to some member of the Society, who would take care to keep them pure. You are aware that I introduced the Valencia Melon and Mammoth Squash in '51, and I don't think there is now a pure specimen of either kind in the State. My Japanese Beans are doing well; I will send you the result as soon as harvested.

The small Melons you saw, from seeds of one which gained a prize in England last year, are not yet ripe. If they turn out well, I'll send you one. Wishing you all the success you deserve with your Exhibition, &c.

I am, dear sir, truly yours, E. PINNIX.

QUINTAY RANCH, Aug. 16.

COL. WARREN: With this you will receive two of the English prize Melons I mentioned to you in my last, and I think you will agree with me that their flavor is most exquisite. To my taste they are far superior to any I have yet seen in California.

In haste, truly yours,
E. PINNIX.

The above we received in excellent order, and are now on exhibition at the Society's Rooms. Such specimens do honor to the cultivator, and it is such cultivation only, that will awaken a true love of the science. We had but alluded to the same melons of '52 in our journal of the last week, and were rememberiug the laudable interest then manifested by Capt. Pinnex, and the excellent quality of the melons then sent, when this collection came to hand. For such contributions, we return Capt. Pinnix many thanks, in the name of the State Society, and assure him that his wishes shall be attended to.

A Visit to the Mines.

THE following was written as part of the article with the above heading, published last week, but was accidentally mislaid:

As we have said, no just conception can be had of the magnitude of the mining enterprises, without a personal inspection of them; and we particularly recommend to those who are making a summer journey, a trip to Park's Bar, during the months of September and October, when these works shall be in operation. We hesitate not to say, some of the richest deposits that have yet been discovered, will be found hero.

The Golden Channel Company has a claim of 1000 fee long on the river. The water is now from 12 to 25 feet deep in the basin they are preparing to dry, and they are putting in four powerful steam pumps, from which the water will be carried in their waste flume and leave the bed of the river dry. The gigantic plans of fluming the whole river have been completed by several companies up and down, the present company being at the end of the flume and in the deepest water. Above the Gold Channel Company, are the Hedges Company, 400 feet; the Canal Company, 600 feet; Evans Company, 500 feet; Gevoy Company, 1000 feet, and several others.

Some idea of the cost of labor and materials expended in the mines can be had, when we inform our readers, that *all these works, however stupendous or costly, are washed away every year*, by the swelling floods; and although this fact is known to the miners, and although many operations cost five, ten, twenty, forty, and sometimes sixty thousand dollars in a single company, yet with an energy and perseverance worthy success, they work on in faith until their work is completed and they realize a fortune or find they must "try again." Hundreds of thousands of dollars worth of lumber is annually washed away from these works in the mines; but it is not lost wholly—it is scattered all along the river sides for miles and miles, and furnishes *fencing stuff* for the farmers. Nearly all the arrangements for farmers' use—corrals, log barns, shanties, fence, &c.,—are made from the wreck of mining operations and drift wood, so that what is *loss* to one class, is *gain* to another.

The miners are generally doing a prosperous business, and there is an active and healthy trade all through the mines, among the traders. We desire particularly to mention the general comfort and oftimes luxury that is found high up in the mining region. We found many fine garden spots, which would have been beautiful but for the grasshoppers. We noticed many fine cottages built and furnished with exquisite taste and refinement, at Long's and Park's Bars; Messrs. Burnett, Shearer, and Lowe, each enjoying the blessings and comforts of *homes*. There were many others, and to several we were indebted for kindly courtesies.

We had a pleasant visit at Dr. Stone's, at Long's Bar, who courteously provided entertainment. The Doctor is an able and successful practitioner of medicine, and most highly esteemed. What a contrast in name and character. There is surely nothing stone-y about his *heart*, for his kindness and generosity come oozing up like the refreshing water from the deep and pure Artesian; and we know the "continual dropping of (such) water will wear away stone;" this it is that has kept the heart of our friend so malleable while connected with the hardening substances of the world. Next door to the Doctor's is Mr. Sexel, an enterprising merchant, and by the business doing there we should think he must be the general favorite. To Mr. Sexel, ourself and *compagnon du voyage* were indebted for many comforts after hard traveling, bountcous refreshments, a nice room and bed, kind care of our horse, and a hearty *dejeune* next morning. So much kindness from Mr. Sexel and the Doctor, we shall not soon furget. To Mr. Huntington and his partners of the Gold Channel Company, for attentions at their works and in assisting us over the river and works, we were much indebted. We say to all our friends, we wish them unbounded success in all their labors. We were under many obligations to Dr. Wuoster and lady, at Ousley's Bar, for attentions and refreshments after a dusty ride in the mines. From thence we returned to Marysville.

Agricultural Meeting in Yuba County.

AGREEABLY to our mention last week, we publish, from the California Express, the doings of the Yuba and Sutter Counties' Society, at a meeting held at the City Hall in Marysville, on the 13th inst. We publish this in the hope that the proper public spirit thus manifested in that city, relative to the Great State Fair the coming month, may induce other counties to awake to their duty. We would ask most earnestly, where are the Societies of Santa Clara, Napa, Sonoma, and Alameda? Each and all have great interests at stake—each of these counties has an organization, and great interests within its boundaries, and each cultivator is more or less interested, according to the amount he has invested in stock, gardens, nurseries, orchards, or grain fields. When each county is active, the mass will move, and if only few act, then few will reap the benefit. Each of these named counties has important interests at stake, and in an enterprise of such moment as the EXHIBITION OF THE AGRICULTURE, MANUFACTURES, AND INDUSTRY OF THE STATE, every personal, local, or party consideration should be laid aside for the time being, and all with one heart and mind should unite for the public good. Yuba and Sutter have acted nobly—who will imitate their most laudable example? The following are the doings referred to:

AGRICULTURAL MEETING.

A meeting of the Yuba and Sutter County Agricultural Society, pursuant to adjournment, assembled in the City Hall, Marysville, Monday evening, 13th inst. The meeting being called to order, the minutes of the previous meeting were read, when it was moved that the President appoint three standing committees, viz: On Agriculture, Horticulture, and Stock; whose first duty it shall be to report at the Society's next meeting, the names of gentlemen who will offer articles and animals at this year's Fair, for competition, so that proper arrangements may be made in time for their reception at Sacramento.

The motion having been carried, the president appointed the following:

Agriculture.—Richard Rust, J. L. Lockwood, Dr. McMurtree, B. Landis, A. L. Gay, Mr. Reed, and Mr. Crabtree.

Horticulture—James Allen, E. A. Shepard, J. Blanchard, J. Jarvis, G. N. Sweezy, B. G. Hurlhut, and C. Covilland.

Stock—Charles Hedges, S. F. Brewster, Richard Piatt, N. Bareham, G. Britton, Wm. H. Parks and J. L. Burtis.

On motion, the president appointed a committee of five, to report the names of thirty-five gentlemen to act as delegates to the great State Convention and Fair, to be holden at the city of Sacramento, September 25th. The committee retired, and after a short consultation reported the following: James Allen, Richard Rust, J. C. Fall, Charles J. Hedges, J. S. Kirkpatrick, E. A. Shepard, G. G. Briggs, S. T. Brewster, C. Covillaud, J. M. Remeries, H. W. Haskell, A. L. Gay, G. H. Beach, B. G. Hurlbut, L. Washburn, G. N. Sweezey, E. Wilson, Mr. Wikins, Mr. Burnett, Syrus Kellog, J. A. Paxton, J. A. Sutter, J. L. Burtis, M. J. Brophy, H. Degman, M. J. Lord, L. Chandler, J. C. Sargent, E. Teegarden, J. G. Williams, Wm. Meredith, G. M. Hanson, C. Howk, Henry Blackman, and Mr. Wing.

On motion, the nominations were unanimously adopted.

On motion, the Rev. Mr. Briggs, Gen. James Allen, and Col. Richard Rust were made honorary members of this Society.

On motion, the following resolution was carried:

Resolved, That this Society invite as many, both ladies and gentlemen, residents of Yuba and Sutter counties, as can make it convenient, to accompany our delegation to the great State Exhibition, to be holden September 25th, 26th, 27th and 28th, at Sacramento City. The object being to create that general interest necessary to insure its next annual session to be holden at the city of Marysville.

It was then moved, that when this meeting adjourn, it be, to meet at Brown's Hotel, Yuba City, on the third Monday evening in September, 17th proximo, to hear reports of committees, and complete arrangements for the State Exhibition.

The president then announced that Col. Warren and the Rev. Mr. Briggs would address the meeting,

Mr. Briggs was first called, who made his address so pleasing and interesting, as to draw forth frequent applause. Col. Warren being called, entered upon the general merits of, and the high position Agriculture should take, which he handled in a masterly manner, creating the liveliest interest with his audience. He closed by explaining the objects of these associations, and all the necessary details regarding the Great State Fair. And in conclusion presented this Society in behalf of the State Society, a few volumes of books, and a variety of choice foreign and domestic seeds, for experiments; having been collected by order of the U. S. Government, and distributed among the various State Agricultural Societies.

On motion, the meeting tendered Col. Warren, and the Rev. Mr. Briggs, a vote of thanks, for their valuable and interesting lectures of this evening, and extended a general invitation for them to address this Society whenever they may find it their pleasure and convenience.

Mr. Hanson offered the following resolution:

Resolved, That the Agricultural Society of Yuba and Sutter counties hereby invite the officers of the State Agricultural Society to hold their next Annual State Fair at Marysville, and that the Corresponding Secretary of this Society transmit this resolution to the Corresponding Secretary of the State Society.

The resolution was discussed, and meeting with the hearty and earnest approval of all present, was passed unanimously.

There being no further business before the meeting, on motion, it adjourned.

G. H. BEACH, Cor. Sec'y.

Our Boston Correspondence.

BOSTON, July, 1855.

THE great topic of the day is the heat: people talk of nothing but the heat—thermometer above ninety; and no one has energy to use anything but a fan. Those who can afford to get away, rush out of the city, and those cannot, *say they are going*. Ice is a pleasant thing to think upon, and a trip to the sea shore—Newport or Nahant—is far more agreeable than *shinning* in State street, or standing behind a dry goods counter. Thin coats and trowsers from the famed Oak Hall, and cool soda from Brown's, are the only relief for the "troubled ones." If one desires something new in the way of luxury, he will find it at Tompkin's in the shape of cream syrups, a most delicious article, new and singular and very popular, if we may judge from the rush at his soda fountains during the hot days. Sun strokes are common, and foreigners who drink the raw material incautiously, suffer in consequence. Fruit is plenty and ice cream abundant. Provisions are coming down, country hotels are crowded, city hotels deserted, artists are off on their summer sketching tours, and all think of the body and nothing else. Operas and theatres are over for the season, and the actors are all off starring in Canada. Fashionable ladies are preparing to leave the city to create sensations at Newport and Saratoga.

The liquor law in New York took effect on the 4th inst, and sherry cobblers must no more be thought of. They must all make up their minds to obey the law, like goods citizens, even if it does try their tempers, and be thankful for the blessing of cold water, which can be cooled with ice much cheaper than tempered with brandy.

There is a movement on foot to establish a line of steam packets between Boston and Liverpool, and some of the first merchants are actively interested. The great increase of the import business for Canada, through this port, affords one of the strongest arguments in favor of such an arrangement. Within five years the increase of these imports has been almost twelve fold. In 1851 the value of these imports through one firm, though doubtless the chief, *was only about* $517,000; while the value of those imported through Boston during the first six months of 1855, amounted to over $1,700,000, and even this amount, we are led to believe, would have been much increased had the shipping facilities between the ports been more ample. Mr. Train's line of sailing packets has done and is doing much to facilitate this intercourse, and it has become almost a necessity that increased steam facilities should be furnished by Boston, if she would hold her own with rival cities.

Business matters are flourishing. A large number of purchasers from the West and South are in this market, and our merchants are doing a very large business. The fine crops in all sections of the country have stimulated trade, and buyers from abroad feel every confidence that business will be better than ever. The stocks of goods on hand in distant places are small so that the fall purchases will be large. As an evidence we hear of a firm in Pearl street, in the clothing line, who sold a house in one of the western cities a bill of $26,000, and other large transactions are reported. The houses in the boot and shoe trade have also sold more goods the present week than at any other time the present year. What better evidence of the growing prosperity of our country.

Many book publishers of New York are rusticating, during the summer months, at the pleasant retreats out of the city. Among them the Messrs. Harper, of Harper Brothers; and Harry Long, of the well known publishing house of H. Long & Bro., New York, are at a cosy place called the Latourette House, on Bergen Point, kept by Samuel Brown, a most agreeable host, and very popular. There are many books in press which will occupy general attention, for the the fall trade, among the New York publishers. "My Confessions," just published by Derby, are from the pen of a young and promising lady in Brooklyn, who is already known as a writer of fair pretensions, under the *non de plume* of Harriet Prince. Her work indicates a strength of mind scarcely anticipated even by her admirers. Mr. Derby has in press a work, by Judge Walker, of the New Orleans Delta, entitled "Gen. Jackson and New Orleans," in which many facts in regard to the Crescent City and its hero, will be, for the first time, presented. Messrs. Ticknor & Co., of Boston, announce several valuable works, adapted to readers of refined taste and judgment. We would here say, for the benefit of our readers, that books published by Messrs. D. Appleton & Co., of New York, can be had of Ticknor & Fields; those from the press of J. C. Derby, at Phillips, Samson & Co. Messrs. Redding & Co., have all the Harper's publications, also those from Messrs. Long & Brother, New York.

We have many notices of valuable works, which will appear in rotation in the CALIFORNIA FARMER. Owing to the great heat we will have to continue our letter in next number.

DE QUINCEY.

Our Boston Book Department.

[THE following notices appear in several agricultural works East, and we desire our friends and our correspondents, as well as our advertisers in the Eastern States, to observe them, if they wish their business promptly attended to:

The CALIFORNIA FARMER is a valuable paper for advertising in California, particularly for those engaged in Agriculture and Horticulture, it having a large circulation over that State and the other principal States of the Union. The agent may be found at Messrs. James French & Co.'s store, No. 78 Washington street.

N. B.—All new publications designed for notice or review in the CALIFORNIA FARMER, should be sent to the care of James French & Co., 78 Washington street, Boston.]

Received from J. C. Derby, New York, the Life of "Sam Houston"—a brilliant and true Biography, and interesting as a novel. Illustrated with eight fine engravings and three maps. It contains an authentic narrative of the eventful and stirring life of the Illustrious Senator, Hero, Patriot and Statesman. It is full of anecdote, adventure, and thrilling incident, giving the outlines of Houston's career, in language that will touch the heart. "*Every American* should possess it."

Also, just published by the same House,—"Female Life among the Mormons,"—a book full of startling disclosures. There is no subject of the day that is attracting more attention than the rapid increase of the Mormons in Utah. This [illegible] tive is the more opportune, giving as it does, an insight into [illegible] habits and customs of that wonderful people. The book is a full disclosure of the experiences and sufferings endured by Females in the Mormon Country. The author says in her Preface, "Knowing as I do, the evils and horrors of the Mormon system, the degradation, and the consequent vices which extend through all the society, a sense of duty the world has induced me to prepare the following narrative, for the public eye." It proves what has been often proved before, that "*Truth is stranger than fiction.*"

Whilt & Yost, Philadelphia, have just published, "*Our First Families*"—a novel of Philadelphia good society—by a descendent of the "*Penn.*" The author says: "Although the main incidents and principal characters of this work are sketched from life, yet no particular person or private history is made use of in such a manner as to warrant the direct personal application of any portion it." This work is a satire upon some of the principal families in Philadelphia, and is destined to create quite a sensation. It will startle the dwellers in costly houses, and cause them to blush at their false aristocracy. This work is received at the Publishers' agents, Messrs. James French & Co. 78 Washington street, Boston, and we would say to all, read it and be amused and instructed.

Received from T. B. Peterson, Philadelphia, "Mother and Step Mother,"—a tragic tale of domestic life. It is republished from Dicken's Household Words, in 12 chapters. Received by all the Periodical Dealers.

Received from Harper Brothers, their valuable Magazine for July, with unusual variety of matter. The illustrations are very amusing, and the engravings very superior.

ALSO—No. 6 of Harpers' Story Books—entitled Tumboo and Jolibo. These are very entertaining books for the young, and have a large sale. They appear monthly, with Harpers' Magazine.

Harper & Brothers have just published—"Mountains and Molehills"—or recollections of a Burnt Journal—by Frank Marryat. This is a lively and complete picture of life in California. The writer, an Englishman, who has the usual fondness of his countrymen for field sports, spent much of his time in hunting and shooting. During [illegible] much of the country, and he gives us facts of great interest, in reference to its history, as well as its productions, and general features. The work abounds in pleasing adventures, and should be perused by every one interested in California, as it really is.

Received from Wm. V Spencer, 128 Washington street, Boston—"Armand," or the Peer and the Peasant—a play in five acts—by "Anna Cora Mowatt." This play being the production of a woman, rendered its success [illegible] to a degree, in both England and America.

"*Presumptive Evidence*,"—a domestic drama in two acts, by J. B. Buckstone, Esq.

"*Man and Wife*"—a comedy in five acts, by [illegible] James Arnold, Esq. This play was revived at the new Boston Theatre last season, with unbounded success, and the [illegible] was in every respect excellent. It is a very [illegible], and the characters are well [illegible] and [illegible].

"*The Serpent's Wile*"—a [illegible] in two acts, founded upon events which occurred [illegible] a [illegible].

These [illegible] are published by Wm. V. Spencer, [illegible] ton street, Boston, and one is [illegible]. We give these notices for the benefit of [illegible]

State Agricultural Society,

OFFICIAL NOTICES.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

O. C. WHEELER, Rec. Sec.

Sacramento, June 23d, 1855.

Agricultural Visiting Committee.

At a meeting of the Executive Committee of the State Agricultural Society, held this day, Gen. C. I. Hutchinson of Sacramento, Rev. A. H. Myers of Alameda, Hon. Sherman Day of Santa Clara, Hon. W. W. Stow of Santa Cruz and Gen. Allen of Yuba, were elected a Committee for the examination of Farms, Orchards, Vineyards, Nurseries, &c., which may be entered for premiums at the ensuing Fair. Although the time for such entry has expired, yet the Committee is instructed to receive propositions for such entry until the 15th August, being *bound*, of course, to visit only those which may be within their range. Special pains, however, will be taken to answer all special requests. O. C. WHEELER, R. Sec.

[illegible] Society's Rooms, July 27, 1855.

A Call

To every organized County Agricultural Society.

I AM instructed by the Executive Committee of the State Agricultural Society, to ask the earnest co-operation of every County organization, and to ask of the Corresponding Secretary of each such information of their several Societies as will make known to the Executive how much their Counties will do to further the interests of the Exhibition—what products, what stock and what manufactures may be expected from their several counties; and to solicit an active co-operation in this great work. It is also very desirable that special delegations should be appointed to attend the Fair and to act in convention, and thus aid in promoting and advancing all the great and important interests involved.

The Secretaries or other officers of each County are particularly desired to reply to the call at the earliest moment.

Per order of Executive Committee.

JAMES L. L. F. WARREN,
Corres. Sec. State Agricultural Society.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co. have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanying the same.

Every thing of like liberality from our citizens in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

SACRAMENTO, July 5th., 1855.

MEMBERS TO THE STATE SOCIETY.—One of the plans to promote the usefulness of the State Society, is to aid them by the value of membership, and this is one of the sure ways to prove your interest and your wish for its success. Gentlemen who desire to give this evidence of their wishes, can call at the Rooms of the Society on Fourth street, between J and K, or address us, enclosing $10 by mail. This amount entitles them to all the privileges of a member, and they and their immediate families to an admittance to the Society's Exhibitions. We hope many will come forward, voluntarily, and enroll themselves.

Horticultural Department.

The Apple Tree Borer and Sun-Blight.

WHILE in Yuba county we had several occasions to examine young Apple trees, that were seriously injured by the borer and by blight. At Mr. Briggs' orchard we saw large numbers of trees utterly killed by this blight. They were burned near the surface of the earth, for about three or four inches above the soil. Mr. B. lost several hundred trees in this way. He attributes this loss to the intense hot weather upon the sand, which scalds the trees. He has also lost many from the *borer;* but in every instance the borer has been introduced from *imported trees*. Trees grown here are not subject to the borer.

Several other orchards have suffered losses from the same source. We should think the sun-blight was the result of a too speedy growth, in the burning weather, and the contrast between the days and nights in the temperatures, or any cause that checks their growth. Those trees that were denuded of their foliage by grasshoppers, in almost every case, were struck with the sun-blight.

We have heard that growing Tomato Vines around the roots of the trees, has in some degree saved them; but we wish further trial of the plan. Pear trees suffer in the same way, but not so severely.

Will orchardists and gardeners please report to us their experience.

William Cullen Bryant on Horticulture.

AT the late Exhibition of the New York Horticultural Society, W. C. Bryant, the poet, was expected to deliver an address; but being unable to attend, he sent the following letter:

NEW YORK, Tuesday, June 19, 1855.

MY DEAR SIR: May I ask of you to lay before the company assembled this evening in the rooms occupied by the Horticultural Society, my apology for not appearing to address them as I had engaged to do. For some days past I have suffered with a swelled face which has prevented me from preparing myself for the occasion in the manner I wished, and which unfits me for appearing to day.

It had been my intention to advert to some of the more remarkable triumphs of horticulture in hightening the beauty of flowers and improving the quality of fruits, and thence to draw encouragement for those who follow this pursuit in our own country. The favorite varieties of cherry in France and England decay for the most part the instant they ripen in the warm and often showery weather of our June and the beginning of July, and we have yet to acquire varieties suited to our climate which will preserve their freshness a reasonable time after maturity. The apricot blossoms are so often nipped by the spring frosts that they can never be relied on to produce fruit, and we have yet to inquire whether more hardy, or, at least, later blooming varieties, could not be found on the declivities of Lebanon, or further north on the skirts of Caucasus, which are in some cases covered with large tracts of apricot trees. I intended to have given some facts from my own observation to show that the grape of Europe in its natural state is not by any means the agreeable fruit we find it in the cultivated varieties. From these and from the tendency of our native grapes to run into innumerable varities, I thought it might be reasonably expected that we should yet produce on vines of a hardier and more luxuriant growth native grapes, rivalling in every respect those of the old world. I meant to show that the American gooseberry naturally passes into varieties very different from each other, and from this to infer the improvability of the fruit to such a degree that we might hope to produce it of as large a size and as fine a flavor as those of England, yet free from the mildew which attacks the English gooseberry in our climate. The fruit of the American blackberry is naturally of a finer flavor than the European and greatly varies in quality even in the fields. We may yet have as many varieties of this fruit as of the raspberry. No attempt, I believe, has been made to improve the fruit of the American plum, whether the Chickasaw, the red, or the beech plum, while the art of the gardener has been exhausted in obtaining from the plum of the old world varieties most remarkably different in size and flavor, from the little mirabelle of the size of a bullet to the magnum bonum vieing in dimensions with the peach. If the custard-apple of the West had been a native of Europe, can we suppose it would not have been brought into the gardens centuries ago, cultivated with care, rendered prolific, improved in size and flavor, and made a common table fruit in its season?

One of the most splendid garden flowers is the pansy, Its parent is the little three-columned violet of Europe, pretty, but too small to be conspicuous. By crossing it with other species of the violet and pampering the hybrid plant, a dazzling combination of glowing colors has been produced; the stalks have become tall and the petals broad. We have among the flowers of our own fields a little white violet of intense fragrance. By the same process of hybridization it is probable that the size might be enlarged and its fragrance retained, and a new ornament be added to our gardens. We have other beautiful flowers in our forests and fields for which art has yet done nothing to make their bloom less transient. In the prairies of the West flourish bulbous plants worthy of a place on our window-sills in March with the hyacinth, narcissus and the Syrian anemone.

These are some of the topics on which I intended to dwell, and I mention them now because it seems to me that as suggestions of what may yet be accomplished in horticultnre, they may be considered as not entirely without value.

I am, Sir, respectfully and truly yours,

W. C. BRYANT,

To Wilson G. Hunt, Esq.

EFFECT OF CULTURE UPON WILD PLANTS.—The large and juicy Altringham carrot is only the woody spindly root of the wild carrot (*Daucus Carota*) luxuriously fed. Our cabbages, cauliflowers, Kohl-rabis, and turnips, in all their varieties, spring from one or more species of Brassica, which in their natural state have poor woody bitter stems and leaves, and useless spindle-shaped roots. Our cultivated potato, with all its varieties, springs from the tiny and bitter root of the wild potato, which has its native home on the sea-shores of Chili; and our apples, plums, grapes and other prized fruits, from well-known wild and little-esteemed progenitors. Our gardens are full of such vegetable transformations. It is so also with our corn plants. On the French and Italian shores of the Mediterranean grows a wild neglected grass known by the name of Aegilops. Transplanted to the garden or to the field, and differently fed, its seed enlarges, and, after a few years' cultivation, changes into perfect and productive wheat. From other plants originally wild like this, though as yet unknown, have come our oats and barley, and rye and maize, in all their varieties, as well as the numerous forms of the Eastern durrha, rice and millet, and of the less known quinoa of Upper Chili and Peru. It is the new chemical conditions in which the plants are placed, which cause the more abundant introduction of certain forms of food into their circulation, and tho more full development, in consequence, either of the whole plant, or of some of its more useful parts.—*Professor Johnston.*

CURRANT TREES.—Having noticed that currant bushes may as well be made trees as shrubs may, I conclude to tell you how I have seen it done. In the Spring of 1851 my father commenced a garden, and among other things set cuttings for currant bushes. I determined to experiment on one of these cuttings; and as it grew, I pinched off all the leaves except the top tuft, which I let grow. The cutting was about fourteen inches long, and during the summer the sprout from this grew ten inches. The next spring I pinched off all the leaves to about half way up to the first year's growth, so as to leave the lowest limb two feet from the ground. It branched well and became a handsome little dwarf tree. When it came to bear fruit, it was more productive than any other bush in the garden, and the fruit larger. It was less infested with spiders and other insects; hens could not pick off the fruit, and grass and weeds were more easily kept from the roots, and it was an ornament instead of a blemish. Now I would propose that currant cuttings be set in rows about four or five inches apart each way, (let them be long and straight ones,) and trained into trees.—*Michigan Farmer.*

STRAWBERRIES.—Rezin Hammond, of Anne Arundel County, Maryland, has one hundred acres of land set in strawberries. On the 11th ult., thirty acres appeared as if the pickers had not yet invaded them. The berries hung on the vines as thick as clusters of grapes and filled the air with their delightful perfume. Mr. Hammond has employed as many as two hundred pickers this season, consisting of men, women, boys and girls. The price paid for picking is one and a half cents per quart, at which rate good pickers can make some three dollars per day. His largest day's picking has reached about fourteen thousand quarts—over four hundred bushels—and the average will not be less than five thousand. In all he expects his picking to reach near one hundred and fifty thousand quarts, which is but a fraction short of five thousand bushels.

NUMBER OF SEEDS IN GIVEN WEIGHTS.—Mr. Melvin stated, in a late discussion at an English Farmer's Club, that, after several trials, he had found that—

1 lb of red clover, of good quality, gives per acre to each superficial foot	6¼	seeds.
1 lb yellow clover, (*medicago lupulina*)	6	"
1 lb white clover	16	"
1 lb rye grass	5	"

But, as a large number of the seeds sown do not vegetate, and many of the plants which come up die, it is necessary to sow much larger quantities than are specified; and Mr. M. recommends, for an acre, 8 lbs. red clover, 2 lbs. white do., 2 lbs. yellow do., with one bushel of rye grass, which, by his computation, affords 100 seeds rye grass, 50 of red clover, 23 white, and 12 yellow clover, per superficial foot. In this country, a good substitute for the rye grass would be the same quantity of red top per acre.

THE TURKISH FLINT WHEAT.—One hundred bushels of this hardy and productive grain have been received at the Patent Office, Washington, D. C. It was grown at the foot of Mount Olympus, in Thessaly, and was procured by the U. S. Dragoman at Constantinople. It has been proposed that the storeships in our navy, which generally return from the Mediterranean in ballast, should be freighted with seed wheat, purchasable there under ordinary circumstances, at less than half the usual price of grain in this country, and to be furnished to our farmers at a nominal rate, on condition that they shall cultivate the same and report the result.

Miscellany.

MY FATHER.

As die the embers on the hearth,
And o'er the floor the shadows fall,
And creeps the chirping cricket forth,
And licks the death-watch on the wall,
I see a form in yonder chair
That grows beneath the waning light;
There are the wan, sad features; there
The pallid brow and locks of white.

My father! when they laid thee down,
And heaped the clay upon thy breast,
And left thee sleeping all alone,
Upon thy narrow couch of rest,
I know not why I could not weep—
The soothing drops refused to roll;
And oh! that grief is wild and deep,
Which settles tearless on the soul.

But when I saw thy vacant chair,
Thine idle hat upon the wall;
Thy hook—the penciled passage where
Thine eye had rested last of all—
The tree, beneath whose friendly shade
Thy trembling feet had wandered forth;
The very print thy feet had made
When last they feebly trod the earth;

And thought, while countless ages fled,
Thy vacant seat would vacant stand—
Unworn thy hat—thy book unread—
Effaced thy footsteps from the sand;
And widowed in this cheerless world,
The heart that gave its love to thee,
Torn like the vine whose tendrils curled
More closely to the falling tree.

Oh, father! then for her and thee
Gushed madly forth the scorching tears;
And oft, and long and bitterly
Those tears have gushed in later years;
For, as the world grows cold around,
And things take on their real hue,
'Tis sad to learn that love is found
Alone above the stars with you.

Letters from Roving Jack.—No. 8.

SUGGS THE RUINED POLITICIAN.

MERCED COUNTY, August 4, 1855.

EDITORS FARMER: My writings hitherto may justly be termed of a medley character, and may be accounted for in this way: I never write until I think of something to write about, and how near I have attained the object aimed at (of always writing about something,) I leave the readers to pass judgment. Sometimes I think of a subject entirely foreign to anything that I ever have written upon. The consequence is, if I feel like writing, I sit down and pen an article on the subject first in my mind, and, as near as I can say, all I know about it, regardless of what the heartless critic may advance for or against it. One thing, however, I undertake to say (in proof of which I would refer the reader to my numerous miscellaneous letters that have appeared in the public journals at different dates), which is, that in all of them I have preserved a degree of consistency and candor, and have not been guilty of innovations in point of fact. One would almost fancy that Roving Jack stood charged with having committed some criminal offence contrary to the peace and dignity of the State, and that this article was produced as a defence, disproving the charge. Such in reality not being the case, and as I only am charged of being a medley writer, to which charge I plead guilty in all frankness, alledging meanwhile that I do not write upon any subject unless I am thinking about it, and regret that I cannot say the same of my accusers.

During my excitement the last few moments, I came near forgetting the intended subject of this article, which is the melancholy state of mind I found my friend Simon Suggs in, a few days since. Mr. Suggs is a politician; that is, he has made politics a study, and may very truly be denominated (however anomalistic it may appear,) *an honest politician!* He is a strict partisan, and has always been true to his party. Well, a few days since I was passing through a sylvan wood in the neighborhood, admiring the beauties of rural life, at the same time feeling a little proud that I was an independent "elod hopper," entirely free from those forms of conventionalisms entailed upon city life, when a sound slap on the shoulder dealt by the stalwart hand of my political friend, soon aroused me from my pleasant reverie to a sense of my insignificence, and brought me to a period in my locomotion. As quick as I could recover I changed fronts, by facing about and looking up into the face of the intruder, cautioned him a little about his manner of saluting little men, reminding him at the same time of his herculean strength, of which a small test prompted me to consider myself a very competent judge. When the usual compliments were interchanged, Mr. Suggs commenced the conversation by declaring that he was a ruined man, a done-up politician: said he—"you know, sir, that for six years I have been, in California, a strict adherent to the political creed of the old line of democracy. The party has never required my services, when

I did not heartily respond to the call. I have exhausted my means, and with it my popularity with the party. I have worked in the ranks as a mere private, without pay, for eight years before I came to this country or State. I did not work for pay, I did it not for personal agrandisement. I wurked here and in the Atlantic States for the advancement of the party. Aye, sir, believe no man would dare doubt the democracy of Simon Suggs. Well, I have served them long and faithfully. I have been instrumental in the elevation of men into high positions. I flattered myself they would be my friends still. But, sir, in my efforts to promote them, do you suppose that I retained their friendship as in former times? No, sir! In mingling in the mazes of the political arena, I am forgot. The atmosphere in all legislative bodies has, or seems to have a lethean effect upon my old friends, and they only think of me to claim my services again. They ask me—'are you a democrat?' I say, yes. The demand is, 'then go to work for me.' The order is imperative, and should there be any failure upon my part, why, I am denominated a faithless and an unprofitable servant, a Bolter, a Bogusite, a Know Nothing, and d——l knows what else. In this country I must fail for the want of funds, I therefore tell you, Jack, I am gone in—the curses of the party will be heaped upon me."

Thus ended the remarks of Simon Suggs the ruined politican. The perspiration was streaming from his forehead. Said I, Mr. Suggs, you have one thing yet to learn. You have learned much, you have taken great pains to inform yourself upon State and national politics; but, my dear sir, you are under a false delusion. Your life has been spent in pursuit of an "Ignis Fatuus:" a shadow that has no substance. You have been playing at a game of chance, where all must lose. Sir, learn from experience, that to succeed in politics you must adjure honesty, become a sycophant, a trickster, and read only read, of modesty. You must have money, and deal largely in back-mail, manufacture your own newspaper puffs, for which you must expect to salt the leading organs; well bribe shoulder lifters, employ rabble leaders; wink at the groans of the oppressed; furnish some respectable community with a few thousands, to be appropriated in purchasing some magnificent present to you, with form and pomp; be sure that the leading periodicals notice it freely—and two to one you will be elected Governor. Once elected, if you do not manage by appointments, stealing, "etcetera," to fortify yourself in office for life, you are to blame. Talk to me about political honesty!—bah! The very idea reminds me of the sermon that was preached to our mother Eve in the garden of Eden. We then separated, and Mr. Suggs gave me his hand that he would never engage in politics any more; that he henceforth should engage in tilling the soil, and read the CALIFORNIA FARMER, and persist in the pursuit of an honest livelihood. I say, go it Suggs.

Respectfully yours,
ROVING JACK.

A Remarkable Man.

A correspondent of the N. Y. Tribune, writing from the West, thus describes an individual well known throughout the Western States:

In the vicinity of Jacksonville is the most noted man in Illinois, not excepting the "little giant." I am told that he is a native of Muskingum county, Ohio, and that he emigrated to the prairies many years ago with money enough to buy a quarter section of land. He is of medium stature, but his frame has been one of immense power and tughness. Sometimes when he has been purchasing cattle he has accomplished the almost incredible feat of riding on horseback nine successive days and nights with no sleep but what he got in the saddle. His judgment of cattle is nigh infallible. He will ride into a drove of cattle, glance over it, with incredible quickness counting the number, singling out the average ox, computing from him the whole druve, and uffering a price for the whole more promptly than many would for a single ox. He has the reputation of being a fair dealer and will not haggle with those who sell to or buy of him. If his customers like his terms that ends the matter, and if not it certainly ends it. He measures out his plans weeks ahead by the half hour, never failing in his engagements and never furgiving the laggard who keeps him waiting. His cattle business enlarged enormously until he purchased and sold many thousands a year. All the money not needed in this business was invested in lands, and it is said that he has never been known to sell an acre. His home farm contains ten thousand acres, and a gentleman told me that one field on that farm, planted year after year with corn, contains three thousand acres, and another four thousand. Near La Salle he has a tract of some six or seven thousand acres, and besides these many smaller farms of a section, less or more. His larded estate is said to be worth a million of dollars.

His mode of dealing with his tenants is characteristic. He assigns them certain tracts and tells them he wants them to put in so many acres with corn, agreeing if they work well to pay them so much a bushel for the crop when ripe. In the Fall he brings each man his money, and then drives to each a certain number of cattle and hogs, and says: "I will pay you so much a head to feed these this Winter all they can eat, and you are to have them at my house on the first day of next May." On the specified day his droves are coming in from all directions, and buyers from the East and the cities are there attending the greatest cattle market at the West, if not in America. The beef cattle on the ground amount to thousands, and the drovers are able to get just what they want. And what is singular, this man never keeps book accounts, retaining the minutest details of his immense business in his memory, and filling up his engagements with perfect exactness.

A few years since such protracted tasking of mind and body broke him down, and I am told that he is showing too many signs of age for a man said not to be sixty. In some respects he is the most remarkable man in Illinois, the like of whom will not soon be seen again. His name is JACOB STRAWN.

St. Petersburg Bird Market.

Perhaps for a stranger, the most interesting portion of this world of markets is that of the Tshukin Dvor, where the birds are sold. Two long rows of booths are full of living specimens of ornithology; pigeons, fowls, geese, ducks, swans, larks, bull-finches, siskins, and hundreds of other singing birds, are there collected, and form the most picturesque and variegated menageries that can be imagined. Each booth is of wood and open at the front, so that the whole of its contents may be seen at once by the passing stranger, who is saluted with such a concert of cackling, crowing, chattering, cooing, piping and warbling, as would suffice to furnish the requisite idyllic supply of melodies for a hundred villages. Between the opposite booths are usually such bridges as I have already described, from which the pictures of saints are suspended, for the edification of the devont. On these bridges and on the booths whole swarms of pigeons are constantly fluttering about, the peaceful Russian being a great lover of this gentle bird. Each swarm knows its own roof, and the birds allow themselves to be caught without much difficulty when a bargain is about to be concluded. The pigeon is never eaten by a Russian, who would hold it a sin to harm an animal in whose form the Holy Ghost is said to have manifested itself. Pigeons, are bought, therefore, only as pets, to be fed and schooled by their masters. It is curious to see a Russian merchant directing the flight of his docile scholars. With a little flag fastened to a long staff he conveys his signals to them, makes them at his will rise higher in the air, fly to the right or left, or drop to the ground as if struck by a bullet from a rifle.

The poor little singing birds—the larks, nightingales, linnets, bullfinches, &c.—must be of a hardier race than in more southern lands; for in spite of the bitter frost they chirrup away merrily, and salute with their songs every straggling ray of sunshine that finds its way into their gluomy abodes. The little creatnres receive during the whole long winter not one drop of water, for it would be useless to offer them what a moment afterwards would be converted into a petrified mass. Their troughs are accordingly filled only with snow, which they must liquify in their own beaks when they wish to assuage their thirst.

Moscow is famed for its cocks, and here the Moscow cock may be seen proudly stalking about, in cages and out of them. The best pigeons are said to come from Novgorod, and Finland furnishes the chief supply of singing birds; geese are brought even from the confines of China, to be sold as rarities in the Tshukin Dvor, after a journey of more than 4,000 miles; grey squirrels may be seen rolling about in their cages like incarnate quicksilver; while rabbits and guinea-pigs, without number, gambol their time away in their little wooden hutches. Within the booth, a living centre of all this living merchandise, behold the merchant, closely ensconced in his wolf-skin, and ready to dispose of his little feathered serfs at any acceptable price. At the back of the booth, be sure, there hangs a saintly picture of some sort, its little lamp shedding a cheerful light to guard the feathered crowd against the evil influence of intruding demons; but there are evil spirits that the good saint cannot banish. Man is there to hold in chains or to sentence to death, according as it may suit his calculations of profit, or the caprices of his palate. On shelves around are ranged the trophies of his murderous tribe, and the northern swans, the heathcocks (*reptshiki*), and snow-white partridges (*kurapatki*), are piled up under the very cages from which the captive larks warble their liquid notes.

It is astonishing what a quantity of these birds are yearly consumed at the luxurious tables of St. Petersburg. In winter the cold keeps the meat fresh, and at the same time facilitates its conveyance to market. The partridges come mostly from Saratoff, the swans from Finland, Livonia and Esthonia supply heathcocks and grouse, and the wide steppes must furnish the trap geese which flutter over their endless plains where the Cossack hunts them on horseback, and kills them with his formidable whip. All these birds, as soon as the life-blood has flown, are converted into stone by the frost, and packed up in huge chests are sent for sale to the capital. Whole sledgeloads of snow white hares find their way to the market; the little animals are usually frozen in a running position, with their ears pointed and their legs stretched out before and behind, and when placed on the ground look at the first glance as if they were in the act of escaping from the hunter. Bear's flesh is also sometimes offered for sale in this market; and here there may be seen a frozen reindeer lying in the snow by the side of a booth, its hairy snout stretched forth upon the ground, its knees doubled up under its body, and its antlers rising majestically into the air; it looks as if, on our approaching it, it would spring up, and dash away once more in search of its native forests. The mighty elk, likewise, is no rare guest in this market, where it patiently presents its horns as a perch for the pigeons that are fluttering about, till, little by little, the axe and the saw have left no fragments of the stately animal, but every part of it has gone its way into the kitchens of the wealthy.

Similar markets for birds and game will be found in every large Russian city. Indeed the habits and fashions of the Russian markets are completely national. Those of Moscow vary but little from those of Tobolks; and Trkhutsh, Odessa and Archangel have shown themselves equally servile in their imitation of the metropolitan bazaars.—*J. G. Kohl's "Russia."*

Ladies' Department.

An Inquiry after "Betty Martin."

PIKE, Santa Cruz County, Cal.,
August 14, 1855.

MR. EDITOR: I will feel much obliged by your inserting in your columns, the enclosed communication to your charming friend "Betty Martin." Being naturally a very bashful man, it is painful for me to give such publicity to my too ardent feelings; but as your valuable paper is, as yet, the only medium through which I have the happiaess of knowing her, I hope she will excuse me.

Of my personal appearance I have said nothing, but should my suit meet with a favorable reception, I will then describe myself as accurately as my modesty will permit. If, however, you should think it better for me reserve this last as a pleasing surprise on our first interview, I will be guided by your judgment.

I began answer at as early a date as possible, as in the present state of my heart I find it quite impossible to pursue my rural occupations, and potatoes are growing fast and must be dug.

Yours, &c., A. SQUATTER.

Fair Betty, your "Brenkfast" has vanquished me quite,
Since I've read your description, I've never felt right;
You have spoiled all my relish for pork and for beans,—
What once tasted so well, now uneatable seems.
Could he just see the table we sit round at night,
Your excellent Uncle would start with affright;
While partaking of each indigestible thing,
Which we Squatters regale on, his thoughts would take wing
To the home where his Betty from morn until night,
Like a bird on the wing made all things look bright.
As to "Strata," dear lady I we all look too lean,
To believe more than *one* on our bones could be seen;
His mind on that point might at least be at rest.
But now, fairest Betty, I think it were best,
My Ranch to describe e'er I go to my rest:
One hundred and sixty broad acres are mine,
A "claim" which I hope to secure in good time;
With fair *offers* I mean to try it at first,
And if that will not do, *why secure it I must.*
I've a "deal" cozy room, just eight feet by ten,
Which answers to shelter myself and five men;
A "love" of a stove, two pots and a pan,
In which we now cook all the dainties we can;
Some cups, and cracked saucers, three plates, and two knives,
And some forks with one tine, on which each man contrives
To balance his meat with commendable skill,
While with laughter and talking we strive time to kill.
The dishes we eat on, are first set on right,
The next time we use them they're held to the light;
The bachelor rule being, while you can see
What has been on them last, your'e deemed to be free
From so needless a labor as washing must be.
But our pride is our cooking!
Our bread, and our rolls, if the English but had,
Their cannon to fill, they would not have been bad,
And Sebastopol then would have got such a raking,
That much time and much labor might be saved in the taking.
And other et ceteras are equally good;
But enough, dearest lady, I've said of our food.
With this very faint sketch of a bachelor's life,
You will not deem it strange I should think of a wife:
The gold—your "ten thousand"—ne'er wakened a thought;
An emotion of love in my sensitive heart;
But who, let me ask you, could read your fair lay,
And do aught but dream of you all the long day,
For darker, by contrast, my humble home seems,
And salter the junk, and dryer the beans.
Oh Betty! take pity, in mercy on me,
My worshipped, my angel, I pray you to be:
No "charms" but your own have awakened my love,
But give me a hope, and my life shall it prove,—
Each line that I write, my love warms and grows better,
So I'll close—your most anxious and worshipping

SQUATTER.

P. S—For your sake, dearest Betty, I think it were better
To bring that "ten thousand"—it might better the matter,
A title a troublesome Spaniard doth claim,
To the land which I squat on—but there's no time to explain.
Let me my once once again, be my care here below,
Is my heart and fortune my Love to bestow

S.

To REMOVE STAINS AND MARKS FROM BOOKS

A solution of an oxalic acid, citric acid, or tartaric acid, is attended with the best, and may be applied upon the paper and prints without fear of damage. These acids, taking out the writing-ink and not touching the printing, can be used for restoring books, where the margins have been written upon, without attacking the text.

Night.

(WE copy the following beautiful apostrophe from the Marysville Herald. It contains so many lessons of truth and beauty, that we know our fair readers, at least, will thank us for it:)

"Oh lovely night! from thee I learn to bear
What man has borne before;
Thou layest thy finger on the lips of care
And they complain no more."

The glories of the golden dawn, the splendors of noon-day, the fading light of evening, and the holy calm of twilight, have awakened the melodies of many a sweet lyre; but dearer to me, is the strain of that poet who has caught the sweet, yet solemn voices of the night. True it is, that, "day unto day uttereth speech"—its language, from the moment of its glad birth to its calm decline, is praise most eloquent, to Him who scatters the cheering beams over all lands, bidding earth and all her tribes rejoice in His radiant smile. But, it is not less so that "night unto night showeth knowledge." And may my ear and my heart ever be open to its solemn voices. And while I'm now writing, it is night—solemn night. The broad eye of day has closed, and all its joyous sights and sounds have departed; a majestic gloom broods over all things. Night has wrapped in her oblivious mantle the golden glories and splendor of day's bright ruler, and naught breaks the fearful contrast, save the twinkling of some far off star, whose feeble rays remind us that light has been.

And, yet, the night is not wholly unlovely, or unloved; for, when the day is past, meditation delights to pursue her task beneath her shadowing wing. When are the woods more solemn, than when darkness broods over the thick foliage, and the night winds, in fitful gusts, sway the outspreading branches of the forest trees? It is such a time as this that suits the spirit that has drank deeply of the cup of sorruw; and those gloomy sights are sweeter than music to the ears of those who have been satiated with the fulsome and unmeaning adulation of a false, pretending world; for the mind finds in the forest gloom, and the night winds sigh, something in unison with the sombre thoughts that are dwelling within.

The thoughts, too, at such a season, are not drawn aside by the multitude of objects which bright day presents, but the mind is turned in upon itself. Its own acts are the objects of scrutiny. The emotions that lurk in the deep recesses of the soul, are brought under strict review; passion is cooled, reason triumphs, and thought for the moment is supreme.

Night is also the time for self-examination. The acts of the day then present themselves before the mind for judgment. Conscience stamps its approval or condemnation on every action; and, by its impartial voice, we are taught to improve the future by the follies and errors of the past. Night is the time for devotion. The solemn sky, with all its gleaming fires, and the awful silence which prevails, press holy feelings on the soul—these are feelings that prompt man to bow and humbly worship; for, at such a season, the world is shut out, and man, cut off from the throng of his followers, stands alone with God. How important then, that sin should be confessed, ere sleep be invited. Night is the time for music's soft strain. Its notes, breaking upon the stillness which reigns around, seem like the voices of far off angels, and every pulsation of the heart beats in unison with their song. The mind too, then is better suited to the reception of holy impressions; and oft, at such seasons, we seem borne away from earth, and to stand with the eternal harpers near the heavenly throne.

Let us then improve its pensive gloom—its solemn silence. Let music swell—let prayers of our sainted mothers rise—let thought be free to range through the vast empire assigned by the Creatur, and we shall have abundant reason to thank God for night, with its countless stars that so thickly stud the vaulted arch of heaven.

But dear me, see how time has sped since I began to write; pale Cynthia, which was the arising has pursued its trackless course in the ether spread canopy, until she is waning low in the distant west, and continues only to shine with it pale and lessening rays till almost lost to view and my candle too, has burnt low in its socket which forcibly reminds me that time is fast fleeting, and the small hours of the morning are close at hand.

ALICE.

AN English paper says: "At Nahant, a recent traveler in America saw a number of American ladies bathing, in brilliant attire, somewhat Eastern in its details; and he expatiates on the elegance of the scene, when they emerged, with countless pairs of little white feet, twinkling on the sand." An American, however, surprised him in enthusiasm about these damsels, who, he said, come down to breakfast after their bath fresh as a rose bud, looking as sweet and dewy as a *garland che of roses!*

TO CLEAN FEATHERS.—Take for every gallon of clean water, one pound of fresh made quick-lime mix them well together, and let it stand twenty four hours, then pour off the clear liquid. Put the feathers into a tub, and pour over them the lime-water to thoroughly cover them. Stir them briskly and repeat for a few minutes, and leave them to soak for three days. Then remove them from the lime-water, and thoroughly rinse them in clear water, and spread them to dry. They may be put either for new feathers, as they have become heavy or limpid by age or use.

SAY to pleasure, gentle fair, I will have none of your apples.

FESTIVAL TOURNAMENT.

We publish to-day, the additional premiums of the State Society, or rather those offered under the sanction of the Society, and call the particular attention of all parties to them.

SPECIAL PREMIUMS.

A Grand Festival Tournament.

The funds for these premiums are from private sources. No competitor will be allowed to enter the list without a card from a committee competent, to secure ladies from improper association.

LADIES IN SADDLE.

To the most accomplished Lady Rider, a Gold Watch and Chain $100
Second best, a Saddle 50
Third do a Silver Cup 25
Fourth do a Riding Whip 10

GENTLEMEN IN SADDLE.

The most skillful Gentleman Rider, Silver Plate $50
Second best do do do 25

SKILL WITH THE LASSO.

The most accomplished Horsemanship with the Lasso, a Silver Cup $50
Second best, a Cup 25

INDIAN SPORTS.

The most expert and skillful sports of the Indian, with bow and arrow—First Prize $20
Second Prize 10

INDIAN LUXURIES.—The aborigines in Nevada county are reaping a rich harvest of manzanita berries.

MARRIED.

On the 19th Aug., in Washington, Yolo county, by Rev. J. A. Benton, Benj. H. Hoag and Miss Anna Mary Conrad, all of that place.

On the 16th Aug., in Placerville, by Rev. J. L. Sanders, Mr. Shaw Lewis and Miss Mary Dumay.

On the 16th Aug., in Marysville, Augustus F. Leovy and Miss A. Williams.

On the 14th Aug., at Lynch Ranch, near Auburn, Luke E. Secord and Miss Mary Ann Julien, formerly of Illinois.

On the 16th Aug., in Auburn, Sylvester D. Johnson and Miss C. Gelston, both of Sacramento county.

On the 19th Aug., in San Francisco, Henry Murat and Mrs. C. Stolyenbergen.

On the 14th Aug., in Marysville, John W. Keller and Miss Ann McCabe.

DIED.

On the 13th Aug., in Auburn, of inflammation of the brain, Hiram Randall, son of Hiram R. Hawkins, Editor of the Placer Press.

On the 12th Aug., in Placerville, Phebe Jane, daughter of Peter Dennis, aged 5 months.

On the 15th Aug., in New Almaden, Martha Jane, daughter of Thos. Bryan, aged 5 years.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President.

☞ **Consumption Can be Cured!**—Sir James Clark, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a Cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other modern pathologists."

The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope, and reanimate failing courage in the heart of every sufferer from this disease.

The remedy which we offer has cured thousands.

WISTAR'S BALSAM OF WILD CHERRY, not only emanates from a regular physician, but has been well tested in all the complaints for which is recommended.

*** Be sure it is signed I. BUTTS on the wrapper.
Agents for San Francisco, B. B. THAYER & CO.
Sold by all Druggists. v4 8

☞ **Sands' Sarsaparilla.**—This preparation has now borne the test for over fourteen years' experience, since its first introduction to the public, and each succeeding year brings forward renewed testimony to its great value as a medicinal remedy. The unfortunate victim of hereditary disease, with swollen glands, contracted sinews, and bones full carious, has been restored to health ad vigor. The scrofulous patient, covered with ulcers, loathsome to himself and to his attendants, has been made whole. Hundreds of persons, who had groaned hopelessly for years under cutaneous and glandular disorders, chronic rheumatism, and many other complaints springing from a derangement of the secretive organs and the circulation, have been raised as it were from the rack of disease, and now, with regenerated constitutions, gladly testify to the efficacy of this inestimable preparation.

Agents—HENRY JOHNSON & CO.,
v4-5 1m 146 Washington street, San Francisco.

☞ **Docaticks, the Great American Humoriat.**—His new book is published, elegantly illustrated; 12mo., bound in cloth, extra gilt; and selling in every city, town and village in the United States. 10,000 copies sold the first week of publication. Buy it. Read and laugh!

EDWARD LIVERMORE, Publisher,
v4-5 2w 29 Beekman street, New York.

☞ **Religious Notice.**—The "Pacific Baptist Church" (Rev. O. C. Wheeler, Pastor) will hold Divine Service every Sabbath, at 10½ A. M., and 7½ P. M., in "Temperance Hall," corner of 10th and J streets. The public is respectfully invited to attend. Seats free. v4-4

A Valuable Newspaper Route for Sale.

WE would offer a valuable Route of our Paper for sale to some enterprising young man of good address. It is the Route of the City of San Francisco. The Paper is rapidly increasing in interest and circulation, and to a suitable person a very handsome salary can be made.

Address EDITORS FARMER at Sacramento. v4-8

California Brooms.
"Encourage Home Manufactures."

THE undersigned are happy to announce to the community that they will offer to them about the 10th of August,

Three Thousand Dozen California Brooms.

These brooms are made from stock grown is California. The broom brush was raised in Sacramento county, (the queen of prairie land;) the handles from timber from our own mountains; and the work by our own citizens. We have, 'tis true, imported machinery for the manufacture of brooms; but hope ere long that the genius of California will produce machinery for all the departments of labor.

We shall have samples of our Brooms at the State Society's Rooms on Fourth street, and at our own store, when we trust our citizens will be happy to give preference to the home industry of California.

We shall commence immediately the work of manufacturing, and those who wish our brooms should send in their orders. They will be answered according to their date, as we expect sale as fast as we can manufacture them. We intend they shall be as good, if not the *best brooms* ever offered for sale in this State. LUSK & CO.,
v4-6 Corner of Fifteenth and O streets.

Removal.

THE Office of the Pacific Oil and Camphene works is removed to No. 79 Front street, between Clay and Commercial.

Polar, Sperm, Lard, Neat's Foot and Tanner's Oil, Camphene, Turpentine and Burning Fluid constantly on hand and for sale at the lowest market price.

WILLIAM BAILEY,
Office, No. 79 Front street.
Manufactory, Taylor street, North Beach.
San Francisco, May 9th, 1855. v3-25

First Premium Daguerreotypes.

R. H. VANCE just awarded the FIRST PREMIUM for the best Daguerreotypes exhibited at the California State Fair. Mr. V. would be happy to wait upon any one wishing a PERFECT LIKENESS. The arrangement of his Rooms and Lights are superior to any in the State.

Room:—New Building corner of Sacramento and Montgomery streets, entrance on Montgomery street, next door to Austin's. v4-1

BANKERS.

Notice.

DREXEL, SATHER & CHURCH have removed to the new Banking House, southwest corner of Battery and Clay streets.

Latest Importation.

WE would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of

STAPLE AND FANCY GOODS,

which have been received direct from the manufacturers and importers the past week, per clipper ships "Flying Cloud," "Samuel Russell" and "Red Rover," which, in addition to our former stock, makes it by far THE LARGEST IN THE STATE OUT OF SAN FRANCISCO! And for quality and cheapness, we defy competition; and we say, without fear of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.

200 Parasols, new, rich and beautiful;
100 ps. latest style Bonnet Ribbons and Trimmings;
50 ps. assorted colors, Baregns and Tissues;
85 patterns fancy Barages and Tissues;
25 ps. plain and dotted Swisses;
40 ps. plaid, striped and plain Jaconet;
865 yds. Wash Lawns, $1 a Dress Pattern.

Mens', Youths' and Boys' Summer Clothing.

Manufactured by our House in New York, in the very best style.

BONNETS:—Misses' Flatts, Boys' Hats, &c.

Together with a great variety of other Fancy Goods, for the Fourth of July celebration, too numerous to mention.

CHAS. CROCKER & CO.,
v3-26 246 J street, between Eighth and Ninth.

IMMENSE SACRIFICE!

THERE is no use in throwing 50 per cent. away these hard times, when you can purchase the same articles at

50 per cent. Cheaper

than in any other house in California.

HILLER & ANDREWS.

These well known Jewelers will commence selling off their immense stock of rich and valuable

Diamonds, Fine Watches,
Jewelry, Silverware, &c., &c.,

At New York cost. We do assure the public that there is *no humbug* in this, and we are determined to close out our

Immense Stock at Cost,

and invite the public to call and examine for themselves, before purchasing elsewhere. We have now, by far the largest stock in the State, and it is necessary that we reduce our stock.

Remember 59 J street, near the corner of 3d. v3-26

Oil! Oil!! Camphene!!!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at **51 K street,** Sacramento for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure genuine.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices. [v4-1] WILLIAM BAILEY.

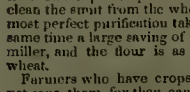
Hay Rakes and Forks;
Scythes and Snaiths;
Grant's Fan Mills, &c., &c.
Received and for sale by
TREADWELL & CO.,
v3-13 corner California and Battery streets.

Important to Millers and Farmers.



THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.
v4-2 CHARLES CAMPBELL.

Agricultural Tools and Seeds.

HOTELS.

MURRAY'S WESTERN HOUSE, AND General Office of the California Stage Company,

Corner of Second and D streets,.....MARYSVILLE.

☞ Open all Night. ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second treet, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.
v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,

Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.
3v-16 1st1 C. M. DAVIS, Proprietor.

Wilson's Exchange,

By Estabrook & James.

THIS popular and extensively known Hotel, which for the last few weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. JAMES, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in the State. v3-25

International Hotel.

THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hotel—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c.
San Francisco, Jan. 9, 1855. PECK & FISHER. v4-7

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

American Hotel

NAPA CITY,.....CALIFORNIA.

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishs PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

TREADWELL & CO.,

Field and Garden Seeds of all varieties;
Ploughs, Harrows, Cultivators, Seed Sowers, of all kinds;
Threshers, Reapers, Mowers, Fan Mills, Straw Cutters, Corn Shellers, Vegetable Cutters, Corn and Flour Mills, Sausage Cutters and Stuffers, Horse Powers, Grant Mills, Wheat Drills, Churns, Ox Yokes, Boxes, Horse Rakes—together with all the small tools and implements appertaining to cultivation.

N. B.—Branch House at Marysville. All orders promptly attended to. v3-5

New Patent

Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.

N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4 3 3m.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Athenæum Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of P[illegible], and for the past three years in this city, would respectfully announce that, in consequence of a [illegible] many requests, he will remain for some months in the city, and can be consulted at his office, where he proposes to treat

Surgical Diseases,

[illegible] accurel as he does that has [illegible] with Medical and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly [illegible] in new and [illegible] practice, renders it [illegible] Dr. C[illegible] and [illegible] surgical [illegible] may be [illegible] T[illegible] and [illegible] any [illegible] the Disease of [illegible] Abscesses, Diseases of the Joints, Eye, Ear and [illegible] and [illegible]

Varieties

"A Lawyer," said Lord Brougham, in a facetious mood, "is a learned gentleman who rescues your estate from your enemies, and keeps it himself."

What absurd ideas sometimes get into the heads of crazy people! There is a patient in the asylum at Utica, who has been employed for two years in getting up a steamboat whose engine shall be worked with Epsom salts. Another gentleman in an adjoining room, proposes to put eliptic springs under Niagara, "to ease the water when it jumps."

A Horse Charmer.—On the voyage to England and the Simla experieneed some very heavy weather in the Bay of Biscay, in which the horses suffered severely, and some, including a charger of General Searlett, beeame unmageable. A valuable mare was so very bad that a pistol was got ready to shoot her to end her misery, when a Russian officer recommended a Cossaek prisoner to be sent for as he was a "juggler," and could, by eharms, eure any malady in a horse. He was sent for, and immediately said he could cure it at once. He was closely watched, but the only thing they could observe him do was to take his sash off, and tie a knot in it three several times. However, the mare in a few minutes got on her feet and began to eat heartily, and rapidly recovered.

Tea-Kettle.—The following extraet from the correspondenoe of Etty, the painter, furnishes a hint to baehelors: "I have been so often and unprofitably in love," he frankly remarks, "I have serious thoughts of paying my addresses to my tea-keetle. I have found her a very warm friend, she sings too. And you know how fond I am of musie. I have heard a thousand times more unpleasant than hers. On a winter's night, after a well spent day, with a volume of poetry—Shakespeare, Milton, Spenser—a volume of Dr. Johnson, or a new Scottish novel, when the wind is blowing and patting against one's window; then sweet is the song of the kettle—sweeter to a studious man than a erying ehild or a scolding wife. However, I must eonsider seriously before I offer her my hand—lest I should burn it."

Dr. Franklin on Spelling.—You need not be eoncerned in writing to me about your bad spelling: it is generally the best, as eonforming to the sounds of the letters. To give you an instance, a gentleman received a letter, in which were these words: Not finding Brown at *hom* I delivered your *messag* to his *yf*. The gentleman called his wife to help him read it. Between them they pieked out all but *yf*, which they could not understand. The wife proposed calling her chambermaid, "beeause Betty," says she, "has the best knack of reading bad spelling, of anybody I know." Betty came and was surprised that neither of them eould tell what *yf* was. "Why," says she, "*yf* spells wife—what else ean it spell?" and indeed, it is a much better as well as a shorter method than *double-you-i-f-e*, which in reality spells *double-wifey.—Franklin's Letters.*

SANDS' SARSAPARILLA,
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of

Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.

In this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still hearing daily testimony to its worth.

Astodishing Oure.

Patterson, N. Y., July 20, 1851.

Messrs. A. B. & D. Sands: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

H. & R. S. Hayt, A. M. Townbridge,

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." Dr. Carswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

Dr. A. H. Macanair, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. Shaw, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

Samuel A. Walker, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

Hon. Samuel S. Perkins says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,
Proprietor, Boston, Mass.

☞ Agents for San Francisco,

PERUVIAN FEBRIFUGE,

FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

This preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

Brooklyn, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. Sands—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEHER.

Virginia Manufactured Tobacco Agency.

Greene, Heath & Allen have removed from California street to the cor. of Washington and Battery streets where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call. Amongst the brands offered are the following:

200	boxes	Crumpton's Four Aces;
75	half boxes	do Medal;
50	packages	do Sovereign of the Seas
60	do	do Bride of the Pacific;
100	boxes	Haley's Four A's;
100	do	Saunders' Harry of the West;
50	do	James Boyd's Gold Leaf;
50	do	do Anna Bishop;
25	do	A. Thomas' Club House;
50	do	Ferguson's Star of the West;
50	do	Miller & Crenshaw's Bluff City;
20	do	Royster's Mary's Own;
40	do	do Invincible;
100	do	Thurston's Cantelope;
50	do	Dickinson's Witch's Eye;
50	do	Crosby & Wootten's Metropolitan.

In addition to the above, we have 2,000 packages of ordinary brands; and as we sell exclusively on Commission for the Manufacturers of Virginia, we can furnish the trade with any quantity or quality required, at the lowest rates. v3-16

New Invention!
Now, Count Your Chickens!!

The undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, *i. e.*, nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the California Farmer; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 26 Third street, South Beach, near South Park.

MISCELLANEOUS.

OLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)
157 *Commercial street, San Francisco.*

The undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at Collins & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

v4-1 COLLINS & CO.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,
MARYSVILLE.
Corner of California and Battery streets, San Francisco.
No. 56 Federal street, Boston

Importers of Hardware, Iron, Steel, Cordage, Paints, Oil Varnish and Window Glass, direct from the Atlantic States an Europe, with a complete assortment of tools and implements for *Farmers, Miners, Carpenters, Coopers, Curriers and Gravers, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others.* v3-5

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

We respectfully inform our friends and the public generally, that we have connected with our other business that of House Brokerage and General Directory, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.
v3-18 WAINWRIGHT, RANDALL & CO.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

Advantages.—An incorrodible and durable ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

Directions.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on tightly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in a pocket with the cap upwards, the piston pens with the cap downwards.

Use good ink, free from sediment. Bradley & Field's American Fluid, also Bryan & Wilcox and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-5

Fly Notice.

Notice is hereby given to all persons interested, that the undersigned will apply to the Board of Supervisors of Sacramento county at the 12 h day of June, 1855, it said board shall then be in session; if not, then on the first day thereafter that they shall be in session, for a renewal of his license to keep two ferries across the American river; one commonly known as "Hoyt's Ferry," near where 28th street of Sacramento City intersects said river; and the other commonly known as the "Middle or Meadow Ferry," about two and one-half miles from said Sacramento City. SAMUEL NORRIS.
Sacramento, May 10th, 1855 v3-24

AGRICOLA'S LETTERS.—NO. 13.

On Stall-feeding and Rearing Young Calves.

(SUPPLEMENTAL.)

EDITORS FARMER: Before Chemistry was dreamed of, by common farmers, as being of the slightest use to them; and, when in country places, the dyer, perhaps, was the only individual who turned its lessons to account, they, in many instances, were doing *almost* everything they ought to have done; partly, it would seem, because Nature, aware of the importance of their calling, had pre-arranged for them, not only the approximate materials of manure for their fields, but also in their common crops, *almost* all that was wanted for their own food, or that of their animals, in a state of perfection; and partly, because their forefathers had stumbled upon discoveries, and they continued to follow them. But now that the light of Science is dawning over the whole land, and the dignity and poetry of Husbandry are beginning to be appreciated, we are not content to go on in the old jog-trot manner we were wont, and to do this or that because, as the Irishman said, "to be sure it was always so;" or, though another system is better, because it requires more study and attention, to proffer the excuse of the indolent *Cottagers of Glenburnie*, "we canna be fashed." In Agriculture, the excrement of animals contains *almost* all the constituents of plants, in proper proportion. In Animal Physiology, the usually grown and usually administered crops contain *almost* all that is wanted for the economical growth and fattening of animals. Will your readers, Messrs. Editors, be content with such *almosts* forever? Or, casting aside the stigma of Pike County notoriety, will they not come boldly forward and say, "We will be up with the times—we will go a-head? *Fas est ab hoste doceri.* If the English *have been* better farmers than we are, they shall not be so any longer. What they know we are bound to know, cost what it may, or wherever we get the information. We have beaten them with our reapers. Let us beat them as farmers."

Believing that such are the spontaneous impulses of the readers of the FARMER, I now take up my proper subject; and in doing so would remark, that I have in my previous Letters only been showing the approximate composition of the animal system, and of the elements of food necessary to support it. The ashes contained in flesh and blood I have merely hinted at. The composition of bones, skin, hair, horns, &c., I have not even alluded to. But as, with the exception of the bones and skin, the proportion which the parts of the animal bear to the gross weight of the whole is but small, rather than go [illegible] I consider would be) an unnecessary [illegible]

on the constituent properties of each, I shall examine the subject in a different way.

Besides the organic elements (Carbon, Hydrogen, Nitrogen and Oxygen) in the bodies of domestic animals, they likewise contain Phosphorus and Sulphur, (already mentioned,) also Iron, Chlorine, Sodium, Calcium, Potassium, Magnesium, and Fluorine. These are their inorganic constituents. Consequently it is necessary to procure such elements for our animals; and if their usual food does not contain them, in a proper quantity, to add those that are wanting.

There is no kind of food that I have been more serious in recommending than potatoes, with a mixture of bean meal to supply the deficiency of nitrogen. But though beans abound in nitrogen, their want of phosphates has been taken notice of by all physiologists; in consequence of which, it has been remarked that "they satisfy the appetite without increasing the strength." This may be of secondary importance in stall-feeding for the butcher; but, in raising young stock, it is of the highest importance. "The soil," says Liebig, "in which plants grow, furnishes them with phosphoric acid, and they, in turn, yield it to animals, to be used in the formation of bones, and of those constituents of the brain which contain phosphorus. Much more phosphorus is thus afforded to the body than it requires, when flesh, bread, fruit, and husks of grain are used as food." The cheapest way in which phosphorus can be administered, in the form of grain, to animals, as it abounds in wheat, is by giving them bran; which is richer in that element than flour is, and, for that purpose, for every three pounds of bean meal, it would be well to add one pound of bran. But a cheaper substitute has been recommended by Johnston and others, which, for various reasons, I am disposed to advocate as advisable. "Why," says he, "should not bone dust, or *bone meal*, be introduced as an article of general food for growing animals? There is no reason to believe that animals would dislike it—none that they would be unable to digest it. With this kind of food at our command, we might hope to minister directly to the weak limbs of our growing stock, and, at pleasure, to provide the spare-boned animal with the materials out of which a limb of great strength might be built up." So far from animals disliking bones they greedily seize them when they can find them on the lands on which they pasture. Besides, they would thus also be furnished with calcium or lime which, he will perceive, is another of those elements which are wanted in the system, and might thus be supplied in sufficient quantity. Chlorine and sodium form the constituents of common salt, of the importance of giving which to cattle farmers are generally aware, and which I have already referred to. Potassium is found largely in the ashes of all vegetables, so that we need not be under any apprehension on its account. Magnesium abounds in many plants eaten by cattle and in clover and potatoes, conspicuously. Fluorine, it is said, is not found at all in plants; which is another reason why we should listen to the recommendation of Johnston in regard to *bone meal*, as it is in the composition of the bones that we find it. Still we have left sulphur and iron, both of which, there is no doubt, animals, under ordinary circumstances, find in sufficient quantities in their usual food; but when we tie them up, it may be a question of some doubt. The former exists abundantly in turnip leaves; but turnips are not suited as a general crop for the use of cattle in California. I would therefore recommend that a few ounces of common gypsum should be given, in some proper manner, daily, or in place of it, a small quantity of flour of sulphur, if meal of bones is not used. (With, perhaps, if the animals are tied up, a little sulphate of iron occasionally) with common salt already mentioned added [illegible]

[illegible]

[illegible]

those requisites which Nature calls for, and which cannot, without injuring it, be dispensed with.

This is no far-fetched philosophy, but is in accordance with our usual conduct, in every day life. The prudent captain of a steamship does not adventure a voyage round Cape Horn, without providing himself with materials suitable for the repair of his vessel, (equivalent to the inorganic constituents of animals,) as well as taking in fuel (equivalent to their carbonaceous food); and provisions for his crew and passengers (equivalent to that portion of the food of animals which is wanted for nutrition.) AGRICOLA.

Who Enters the Lists?

Who shivers the lance for his lady love?
Who wears the "scarf of the fair"?
Come, "enter the lists,"—your gallantry prove;
Sir Knight! shall you be there?

WE are most happy to announce that several ladies of the highest respectability have signified their readiness to contend for the honor of the prizes at the approaching tournament—and it is of the highest moment that all those who may be pleased to join, shall address a note to the Corresponding Secretary's office, Sacramento, at the earliest moment, so that suitable preparation shall be made for their reception and escort.

Those gentlemen who propose to contend for the prizes in saddle, or with the lasso, or those who may be interested in Indian sports, are respectfully requested to forward information of the same.

All those horses intended for these festive scenes, and their keepers, will have *passage free* to and from the course in all the various steamer lines up and down the river. Will the Press extend this notice, and thus subserve the public interest.

Artesian Wells in Yuba and Sutter.

Yuba and Sutter counties are becoming more and more convinced of the necessity of Artesian Wells, and in spite of the hindrances heretofore encountered, the citizens of various localities are now determined to commence anew.

We met the noble Old Pioneer General Sutter, in the city of Marysville, some days ago, in excellent health and spirits. In his hand he held a telegraphic dispatch for the workmen to commence again upon Hock Farm. He had made arrangements for the completion of the work, and he was concluding the contract, on which $1,000 cash had been paid. We pray success to the General, and to all engaged in so grand an enterprise.

We learn with pleasure that several other parties will soon commence a similar work. G. H. Beach, Esq., whose well is now some 300 feet down, will continue the same the coming autumn or winter.

Artesian Wells are the great desideratum, and of the highest moment to the citizens of Yuba county.

Animals for the Fair.

Westphalia Hogs.—These famous hogs imported the last year by A. S. Easton Esq., will be on exhibition at the coming Fair. The largest will weigh about 1400 pounds, the *small* one 800

Black Hawk David Hill.—This famous Horse imported by A. S. Easton Esq., at a cost of nearly $10 000, will be on exhibition at the Great Fair.

Mammoth Ox.—This wonderful animal weighing about 4000 pounds, is now being put in extra order for the coming Fair.

Great Asiatic Flat Tail Sheep.—Three famous sheep of this breed will be exhibited at the Fair, one weighing about three hundred pounds; his tail weighing fifteen pounds.

Blood Horse.—The fine blood horse from Yuba county, will be down to compete for beauty and speed with other counties.

More than ONE HUNDRED of the finest animals of the State have already been named as preparing for the coming Exhibition of Stock, and in the Races.

[illegible]

Marysville Flour Mills.

WE spent some time [illegible] through these extensive mills, for they perform great work, though with very economical power. A very splendid engine of 40 horse-power, that consumes but three or four cords of wood, carries two run of stones of large size, turning out 75 barrels of flour per day easily, and carries the machinery for a planing mill and for tongueing and grooving boards; it also performs all the work for a sash and blind factory; and supplies all the required power for the perfection of the above operations.

We examined samples of the flour, and found them A I. At this mill Ingham's smut-mills are used, and highly approved. Mr. Ingham, we learn, is now adding many valuable and new improvements to his mill for cleansing smutty wheat, and it is worthy of notice. His price is also reduced one-third from last year's prices.

The Marysville Mills are owned by Sanborn, Williams & Co., and by their appearance are doing a very handsome business.

Fulton's Chicken Hatcher.

WE were very much interested in examining this wonderful and curious machine to convert eggs into chirping biddies. It is so curiously wonderful that we will not anticipate the full success of the invention by an *expose* of all its merits, but only give a hint of what it can and will do, and say to our readers that Mr. Fulton has far outstripped all former machines, either in Europe or America. By these improvements we know Mr. Fulton has closely applied himself to study. The results of his researches will be made known at the coming State Fair.

We will simply state that the machine can be made plain and managed in an outbuilding by a lad, or it can be placed in the *parlor*, appearing like a beautiful work-table, and attended to by a lady or a miss. We examined the process and saw the eggs marked in pencil of all the different dates from 6 to 20. We took some of the 15 and 16 and laid them upon the floor, and saw them move. Others of 19, 20, and 21 days we saw as we watched, the little beak picking its way through its shell covering, anxious to break out and "make a noise in the world;" and we saw too the struggle in the "shell house," heard their bitter scream as "imprisoned birds," and anon, as they would break out, we fancied we saw them *crow* as they regained their liberty. But poor things, they were so frightened that they scampered away and hid themselves among the little "egg hillocks," to take breath lest their "mama should know they were out." Those who have read the work recently issued upon the Hen Fever, by Burnham, will not wonder at the book, when they see the Chicken Hatcher, for the truth is stranger than fiction.

Mr. Fuller has invented a thermometer, and a hygrometer, to test the temperature and humidity, and these instruments are entirely without marks or figures of any kind, yet so constructed as to be known by him by sight. Mr. F. deserves great praise for what he has done and is doing. He is preparing everything in a perfect manner, so as to exhibit his work in such a light as will convince all of its utility and importance. He has also prepared an illuminated reflector, by means of which persons can see the change that take place *inside the egg*. The first change perceptible is about the third day, when the mass of matter assumes the form of a horse-shoe. The fourth day it appears like a great spider, with veins or fibres in all directions. This is seen with the naked eye; the 7th day the *heart* of the chick can be seen to *pulsate*; the 10th and 11th it is formed and swings to and fro in the shell, having cast off the spine; during these then proceed from the chick to all the matter that surrounds it, and thus continues to grow till the 15th day, when it has so filled its apartment that light is excluded to our vision. On the 19th, by a little attention you will see the beak break its covering slightly, and in two or three hours after it springs from its shell and runs before you. This is one of the most [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, AUGUST 31, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

A WORD FOR THE CALIFORNIA FARMER.—Who among our many readers will bear us in so kindly a remembrance as to induce *one, two, three or five* of their neighbors to become, like them, subscribers. We wish to enlarge our list, so as to make our paper better. What subscriber will speak to us first?

Prolific Character of Fruit Trees in California.

We hear it often remarked that the fruit trees of this State are remarkable for tendencies to an over-abundant crop, and that it holds good in every description of fruit. We know this to be so, not only in one season, or in one locality, but in all California and Oregon there is a universal disposition in fruit trees to overbear, and unless care is taken by growers to relieve the tree of a part of the fruit, the tree will be seriously injured.

By a little observation any one can see, as the fruit is maturing, a portion of it will grow more rapidly and of fairer form, leaving others of inferior size and form. Remove all the latter from the tree at once, and thus increase still larger the best fruit. This rule should apply to all fruits; to grapes, more particularly of the finest varieties; not only remove inferior bunches from the vines, but small berries from the bunch.

In speaking of the prolific nature of fruit trees in California, in our examinations of the fruit gardens in various sections this year, we have seen as follows, and very recently: Bartlett pears nearly ripe, and the trees blossoming again—not one, two, or three trees only, but nearly all in the orchard; this at Briggs' orchard on the Yuba, near Marysville. In the vineyards of Gov. Boggs, in Napa Valley, clusters of grapes nearly ripe, and the vines in full blossom again; this on nearly every vine. At the large peach orchard of Messrs. Thompson, Suscol Valley, the trees loaded with luscious ripe fruit, and a second crop of fruit coming on; and this, too, on numerous trees. Pear trees also, at Ranch, have a second crop.

Those who feel an interest in these remarkable instances of the wonderful fecundity of fruit trees and who desire to investigate the causes, will do well to examine all these places. They can all be seen and the proprietors will be pleased to show them.

We can cite innumerable instances of peach trees where *every peach on the tree was double*, and several cases where the peaches were *triplets*. Apples and pears are found double, and melons in handsomely formed pairs, twin grown. We know, however, that these facts are becoming so common, among those who are observant, that they are of everyday occurrence, but the great mass of the people should know the abundance that is soon to be poured out upon us.

The Strawberry has already proved a *perpetual* fruit. The Fig gives us *two crops* and ere long will yield *three;* and we hesitate not to say that by and by, at every State Fair, there will be exhibited many kinds of fruit of a *second crop*, and several also of *perpetual* species, never before known of that habit. We shall also have on exhibition the second crops of our cereal grains, for however much we now have to boast of in this land of plenty, "the half has not yet been told."

MUNIFICENT OFFER TO THE STATE AGRICULTURAL SOCIETY.—We are happy to announce the liberal donation of *one thousand dollars* to the State Agricultural Society by a gentleman of San Francisco. The particular object of that donation is to arouse the attention of our citizens to the value of the Agriculture of our State, and the improvement of Stock in California. The several communications and the special purpose of this splendid bounty will be made known in due time. Are there not other wealthy gentlemen that will "go and do likewise?" All donations made to the State Society, of this nature, will be distributed in Silver Plate, bearing the name of the donor.

AGRICOLA.—Our readers must not only be delighted but instructed by this able writer. From the plain and easy way in which this correspondent lays open the "laws of science," the simplest can understand; and the beautiful manner in which he follows the laws of science through all the workings of Nature, up to Nature's God, makes his writings deeply interesting. Every reader should note carefully these *truths*.

Honor to whom Honor is Due.

THE FIRST FLOURING MILL ON THE PACIFIC

Was built by Geo. C. Yount, Esq., of Napa Valley. There may have been *machines* called mills, but we are now speaking of flouring mills worthy of the name of mills. *The Star of the Pacific* is the name of the mill. We have examined many mills, and we must say, for wisdom in designing and planning, for excellence of workmanship, for solidity of construction, for the general beauty, it is equal to any in the state and superior to most of them Were we to find fault with anything, we should say there had been no regard to the cost, in building—that it is too well, too handsomely built. But as the proprietor is amply able, being very wealthy, and wishes a good mill for his own use, it may be best.

This mill is of the largest size, two and a half stories high, carried by water power, the water wheel being about sixty feet in circumference and the finest finished water wheel we ever saw. The whole building is very heavily timbered, the foundations remarkably so. The machinery moved easily, but with power.

Mr. Worlock has charge of the mill, and we felt sure, by what we saw, he was a "master miller." Mr. Worlock conducted us over the mill, explaining every department. Grimes' smut-mill is used here, and gives satisfaction. A large amount of wheat is being prepared for grinding. The proprietor is readily buying wheat at fair prices. This mill has two run of stones, and turns out 125 barrels per day. Samples of Napa wheat and Napa flour will be on exhibition at the State Fair.

We look upon this as a *pattern mill*, and it reflects high credit upon the proprietor and the builders. Mr. Arnut was the architect and millwright; the castings were from the Pacific Foundry of Messrs. Goddard & Co. San Francisco. Truly it can well be called the "Star of the Pacific Mill."

Flouring Mills of Napa City.

We visited the Pacific Steam Mills of Longwell & Co., a large wooden mill, connected with their manufactory of Threshers. This mill is carried by an engine of 30 horse-power. It has two run of stones and makes on an average 80 barrels of flour in 24 hours. Were the bolting cloths more capacious, it could, with the same power, make 100 barrels per day. Grimes smut-mill is used here and approved. The wheat at this mill averages 270 pounds for a barrel of flour. The very best wheat we have seen in the State we saw here, from the Suscol Ranch of Messrs. Thompson & Bro. Mr. Walbrige is the miller at these mills. They propose preparing for the grinding and bolting Indian corn and meal; this is much needed.

Napa Steam Mill.—This is a large mill with two run of stones, carried by an engine of 45 horse-power. At this mill is used Smith's smutting machines, in preference. They use the Buffalo Stones, and turn out a fine flour very handsomely bolted, at the rate of 120 barrels per day. J. L. Cabana is the proprietor, and J. H. Chiniquy, miller.

Both the above mills are on the stream of water, and convenient for unloading grain from the lighters and loading flour into the steamers.

Both mills are doing a good business, and both propose sending samples of their work to the Fair.

RACING STOCK IN NAPA COUNTY.—Several races are advertised to come off at the race course of Maj. Hiram Downing, at Oakville House, about twelve miles above Napa City. On our way up the Valley we stopped and were shown the several animals. There were nine animals in training—four Californian horses, and five American stock, all fine animals, some very fast. We note the following: The "James Francis," owned by Mr. Henry Francis; the "Red Bill," owned by Mr. James Lomax, of San Francisco; "Amanda Wallace," owned by John Bowman; "Napoleon" and Blue Dick," owned John A. Pope; "Flying Squirrel," owned by S. B. Phillips; the "Bull-catcher," "Ellen Tree," and "Obadiah," owned by B. Vines. Among the animals we have noted we are informed of one that has made the mile dash in 1.45.

GRAIN MARKETS.—The markets for all kinds of Grain remain without any material change, and this can be easily accounted for by those as familiar as we are throughout the State. Considerable quantities have been entirely lost. Some by smut, some by rust, some by insects and grasshoppers; and those who have harvested and can keep their Grain, prefer doing so, confident of a better price. We are glad to see the farmer receiving the benefit of his labor. May it always be so, for this will build up the country. We shall prepare careful data of the crops soon and publish them.

Weekly Accounts of Fruits Exhibited

AT THE SOCIETY'S ROOMS.

From A. H. Myers, Alameda, per Wells, Fargo & Co.'s Express, one box of samples, embracing eighteen varieties of Apple. In the accompanying note, dated August 25, Mr. Myers says: "This with two varieties not in this list, which I have previously sent you, will make twenty varieties. The trees are all small and have never been irrigated. In shipping to this country I have lost the labels to some varieties; such the Committee will please to name. In order to obtain this collection I have had to keep some of the fruit too long." The fruit will be laid before the Committee and duly examined, and errors corrected.

From John Lewelling, San Jose Mission, four Bartlett Pears, sent August 23d, and of which he modestly writes: "They may be quite inferior to the same fruit grown in other parts of the State; but as one of the objects is to have a variety from all parts of the State, these may deserve a place." These Pears were very fine, reflecting great credit, measuring 11 1 2 inches long circumference, 10 1-2 and 9 1-2 short do.; weighing 10 ounces, and 8 ounces.

From Smiths' Gardens, a large basket Peaches, containing six superb Mixon Cling, two Crawford Late, two seedlings; also, two bunches Royal Muscadine, two bunches White Sweetwater Grapes. This basket of fruit was most excellent and received very flattering notices.

From Thompsons' Ranch, Suscol, a Seckel Pear of extra size and beauty, from a tree of two years' growth.

From Hooker & Fern, a Citron Melon, weighing 15 pounds—the preserving species.

SAN JOSE, August 28, 1855.

EDITORS FARMER: I find in your paper of 17th August, in the "weekly accounts of fruits exhibited at the Society's Rooms," a description of two Bartlett Pears, as follows: "Largest, long diameter 11 inches, short diameter 8 1-2 inches; smallest, long diameter 10 1-2 inches, short diameter 8 1-2 inches: weight of the two pears, one pound." Now I propose to give the *circumference* and weight of two Bartlett Pears of my own growing: Largest, long circumference 12 inches, smallest circumference 10 1-2 inches. The other pear is, I find on measuring, the same size, and the two weigh one pound and a half. It occurs to me that if the diameters as above given are correct, the pears should weigh quite a number of pounds; but if the diameter spoken of means circumference, then they are below the ordinary size of Bartlett's in San Jose.

I have two pears of the variety called Found. As they have not done growing, I can only give their measurement, which is: long circumference 15 inches, short circumference 13 inches. When they they ripen I will give you their weight.

My pears are all grown on the same tree, on grafts two years old. The tree was transplanted in the spring of '53.

You will please forgive this intrusion, and receive this from your friend, R. G. Moony.

We are pleased to receive the fruit and note of our correspondent, and agree with him that *circumference* is a better understood term for the measurement of fruit, among Pomologists. The reports of fruits are made by committees, who of course use such terms as best suit them. In our own reports and editorials *we* use circumference. We shall always be happy to hear from Mr. Moody, and hope to see specimens of his fruits at the Society's rooms.—Ed.

A Challenge For Stock.

In examining the stock of Salinas, Napa and Sonoma, and in reports made to us, we find some of the most splendid animals of the State. In our round through these counties and among the stock we met with, we saw a most splendid animal, that the owner has every reason to be proud of; so much so that he callenges any stock raiser *north of the Bay*, to produce his equal, for a Silver Cup in the value of $100. This animal is a bull calf of eight months old. Any person desirous to compete with this offer, by addressing proposition and acceptance of the challenge, can be satisfied of the abilities of the parties. Communications addressed to this office will be attended to.

THE GREAT CATTLE SHOW.—The coming Exhibition of the Stock of California will no doubt be one of great interest and value to our State. We are happy to announce that the finest stock of many of the counties of the State is now preparing to compete for the prizes of the State Society. Every stock raiser in this State should make it his especial duty and interest, not only to be present, but to have his best specimens of stock there. It is the only way in which a proper and just estimate can be given to so important an enterprise.

Ho! for Napa Springs.

A GREAT interest is now felt among the traveling community to find the best place of resort. The Warm Springs of Napa are now attracting particular attention; so much so that it is with difficulty you can gain admittance to the hotel at the Springs. Visitors from all parts of the State, several from San Francisco, Sacramento, Marysville and Benicia, are now, the present week, enjoying this pleasant resort.

Over seventy visitors we met there on Sunday last, and many of them severe cases of suffering, These all were daily recovering health.

The house is conducted by Messrs. Evy & Tilley, who do all they can to make their visitors comfortable; but the rush is too great for a small place. The proprietors are preparing to increase their accommodations, and soon a better condition and more comfort will be found.

Having visited the Sulphur Springs of Napa, we feel called upon to make known what we saw there, and these facts can be attested to by many witnesses. The cures that are taking place among those afflicted by rheumatic and cutaneous diseases are almost incredible. We saw a man that we had met only a week previous at Benicia, upon crutches: now he had thrown them away, and was quite active. Another who had been upon crutches for years; yet in a few weeks at this place, he had broken his crutches and was walking freely. Also, another cured in a week. These are facts.

We examined the Springs here, and found that in a distance only of fifteen feet apart, are Hot and Cold Springs; a little distance apart from the White Sulphur are the Yellow Sulphur, and so highly charged as to change the color of a silver dollar in a few seconds to black.

We have only time to say—by all means, ye that suffer, go to the "Pool of Siloam," wash, and be healed. These Springs are a great blessing to our State, and soon will become celebrated for miraculous cures.

The Turf in Yuba County.

THE RACES AT GROVE HALL, MARYSVILLE.

We attended these fine races some few weeks since and took notes of the speed of the various animals. Our notes of the time were lost, and we now give a portion to show that Yuba county can produce some evidence of speed.

The first trial was a single dash of a mile, between "Pocahontas" and "Sister Kate," for $1,000 a side. "Sister Kate" won the race by a neck, handsomely. We had made up our mind that "Pocahontas" would have taken the purse, and think so still, had the rider of "Sister Kate" been upon his back. The rider of "Sister Kate" was a young lad by the name of John Henry Keller, and a finer specimen of riding we have never seen. We think the lad a match for any rider in the United States. The run was made in 1.52.

A race of 440 yards was run between "Old Tom" and "Humming Bird." Time 23 seconds, Purse $1,000 a side.

Another between "Bay Filly" and "Rougin Dick." Time 18 seconds. Purse $400 a side.

Other races were made, but we did not witness them. We regret the loss of our notes. These minutes are correct thus far. We are gratified and happy to know that a large portion of this stock will be down to the State Fair.

THE PETALUMA JOURNAL.—Some days ago we received the first number of a newspaper, commenced on the 18th inst., in Petaluma, called "The Petaluama Journal and Sonoma County Advertiser," published by Mr. Thos. L. Thompson. It presents a neat typographical appearance, and gives evidence that the editorial department will be conducted with ability. It announces its primary object to be "the development of the great Agricultural and Commercial interests of the section of country in which it is located," and as that region has long felt the want of a local press, we congratulate the inhabitants on having this want so properly supplied. We wish the projectors abundant success, and welcome the Journal as a valuable ally in the cause of developing the Agriculture and resources of our Eureka State. By the way, neighbor, we hope to see your section well represented in the State Fair. Are your Farmers awake to the importance of the matter? if not, please to stir them up, as the time is now short to the 25th September.

SACRAMENTO CITY—THE FAIR.—We rejoice to know that many of our prominent citizens are taking an active part in the coming Fair, and we hope the city authorities will move in the matter. We refer our readers to the able article we have copied from the Tribune.

Agriculture and the State Fair.

Under the above heading the State Tribune of Tuesday has an ably written and truthful article, which we copy and commend to a careful perusal:

It is profitable, occasionally, to withdraw the mind from the absorbing and exciting topics involved in a political contest, and wiping off the dust and dirt of party strife, to refresh the tired energies with the contemplation of the less dazzling but more substantial realities of our Agricultural interests. Amid the turmoil of contending parties, and the disputations which conflicting aspirations and passions beget, we are too apt to forget the claims which this subject has upon our attention.

Throughout the widely extended and varied elements of a country's wealth, none are more deserving a respectful consideration than that embraced in the one great, yet, much neglected subject of Agriculture. The Agricultural resources of a country or State, are of all others most essential to its prosperity and power. For the development of these resources, for the practical exemplification of the real Agricultural facilities of a country, there can be no more effectual means than that which is furnished by the annual exhibition of the products of the soil. The productive capacity of a region of country, its fertility, its adaptation to the successful cultivation of plants, the variety which it is capable of sustaining, their perfection and periods of maturity, are thus accurately determined. By the congregation, at stated periods, of cultivators from all sections of the country, moreover, an interchange of views, a comparison of individual experience is attained, which may be made available for the substantial benefit of the cause, and the improvement of all engaged in its pursuit. It is by these associations—by the emulation they occasion—the stimulus they impart to the labors of the ambitious farmer, that Agriculture has been elevated to its proper position in the estimation of the country, and has taken its rank among the Sciences. To us, as Californians, the field for the profitable investment of capital and labor in the cultivation of the of the soils is just beginning to be unfolded. It is vast beyond all previous calculation, and is probably, unsurpassed in variety or extent by any other region of the world. Yet what has been done for the encouragement of this, the principal element of our wealth? It was announced some time since, by the papers of the city, that a State Agricultural Fair was to be held in this city on the 25th September. The journals, generally, have called attention to the fact, circulars have been diffused over the State, and friends of the cause, with an energy deserving of the highest praise, are active in perfecting arrangements on the most extensive scale. No exertion will be spared by those engaged in it, to make the Exhibition worthy of the State and commensurate with the intrinsic importance of the subject. Indeed, judging from the preparations which have commenced, we feel warranted in asserting that no similar exhibition has heretofore been held in any State of our Union, not greatly our senior in maturity and population, which can at all compare in interest and in the magnificence of its display, with that which is soon to be held in this city. How shall all this be accomplished? It is true that, by an Act of the Legislature, $5,000 have been annually appropriated for the payment of premiums, but what has this city and county yet done for the furtherance of the undertaking? What evidence has either yet manifested, of enthusiasm in the subject, or a willingness to co-operate in its promotion?

In the Eastern States, a rivalry is accustomed to exist between the different cities, to have the Annual Fairs held in their respective localities, each emulating the other in the liberality of its appropriations and its offers to defray the necessary expenses. Shall it be said that Sacramento, the second city in the Commonwealth, the great central emporium of trade, the Capital of a vast and wealthy State, and the depot for the productions of one of her richest valleys, blindly closed her eyes upon the advantages of an undertaking in which she is so peculiarly interested? Will our city government coldly fold its arms, in dignified unconcern, about a work which is designed to develop and promote the most reliable and inexhaustible source of the wealth and prosperity of the State? The Agricultural Society, under whose auspices this Exhibition is to be conducted, is yet in its infancy. It has struggled against many difficulties, and contended with baseless and unjust suspicions. Even yet, its members are few, and the duties upon which the perfection of their plans depend, are difficult and laborious. These, the officers of the Society, have undertaken to perform without remuneration or the hope of reward. Shall they be sustained by the citizens of Sacramento? Will the friends of the cause in this city and county, encourage them by their co-operation, and generously aid them in carrying out the plans which have been adopted for the approaching Annual Fair?

The Monterey Sentinel of the 25th inst. mentions that melons from Sacramento were abundant in their market at that time. Owing to the coolness of the atmosphere or some other local cause, it says, this fruit is not successfully cultivated in that neighborhood.

San Jose, August 11, 1855.

To President State Agricultural Society:

Dear Sir—We desire to enter our Nursery, called the San Jose Nursery, for the State Premiums, and shall be happy to see the Committee at such time as shall best suit them.

Respectfully, L. Prevost & Co.

State Agricultural Shows for 1855.

We refer with pleasure to the new Banking House of Messrs. Wilkinson & Co., of Marysville, which appears in our columns to-day. We hastily referred to it previously, as one of the new institutions that the increased prosperity and business of Marysville demanded. The Partners of this House are too well known to need commendation from any source. Their reputation is a sure guarantee of confidence and success. We have long known Capt. C. P. Stone, personally, as the commandant of the Benicia garrison. We have often remarked upon the excellence and beauty of the various structures erected under his own direction there. He looked well to the *foundation*, and we have no doubt, that in the erection of his own Banking House, he will be guided by his long established principle—a good foundation; in fact, the evidence is before us that he has abjured the material from the "Woods," and built upon a "Stone" foundation.

Brick Buildings in Napa City.—The surest sign of permanent prosperity is marked by the removal of old wooden buildings and the rebuilding of brick. While in Napa City we were happy to notice the foundation laying for a block of substantial stores, which are to be erected upon the fine square in the centre of the city, nearly opposite the Napa Hotel, by Messrs. James & Co. merchants. This is one of the oldest firms, a house doing a large and prosperous trade. Their business constantly increasing, requires that they keep pace with the progress of the age, and they now act as the pioneers of brick buildings in Napa City; this block will be the first erected, and two stories high. We learn that Messrs. Earl & Co., saddlers, will also build on the lots that join Messrs. James & Co. These buildings will be an ornament to the city, and a public improvement and benefit.

Thanks! Thanks!—We hope our friends will excuse us if our acknowledgements do not appear promptly, for they are sometimes by the press of matter, as the following were last week, "crowded out":

We must again acknowledge the receipt of a large valuable collection of magazines, foreign and States papers, and pictorials, from our freind G. W. Murray & Co., of San Francisco; for which we return thanks—as well as

To J. C. Mason, Esq., of the Patent Office, for valuable parcels, books, and seeds;

To the Smithsonsian Institute for their valuable reports for 1854, we are very grateful;

To Mr. Fern, of Sacramento river, for those delicious melons, so excellent in a hot day—may his crops increase;

To our kind lady friend E., for the parcel so convenient for a "bachelor's" sanctum—they were the more valuable for the delicate manner in which they were conveyed, and for the beautiful note that accompanied them;

To Messrs. Thompson, for very courteous hospitality, while at Suscol Ranch. Their beautiful grounds and their kindness were as refreshing to the mind and heart as their luscious fruits and other comforts to the body—a full report of which will appear.

Messrs. Wells, Fargo & Co., will please accept thanks for many favors the past week; and to the Pacific Express Company we are also under obligations. And we must not forget the Penny Post Company, for early presentation of papers by the steamers, while at the "Bay City."

We thank our Eastern friends for their liberal favors in advertising patronage and subscribers; we duly appreciate them.

Roving Jack.—"Suggs on Politics," (published last week,) is a truthful picture of the results of leading a life, or rather wasting a life in the political strife that ruins so many. We hope every farmer who is at all engaged in politics, to the neglect of his farm, will read the sketch of Suggs by Roving Jack. We shall be glad of more such truthful pictures of scenes in active life, from the pen of our able correspondent.

From Los Angeles.—The Southern Californian says the gentlemen who have been engaged in searching for coal have discovered some fine specimens of the article, and are sanguine of success. They have petitioned the Council for a few acres of land in the vicinity of their operations. The same paper has the following: Very little is transpiring at the present time (Aug. 22d) worthy of interest. Some considerable improvement is noticed in business affairs, and money is a shade easier than heretofore. Some extensive sales of cattle recently have thrown the needful into circulation, and made our affairs assume a more favorable phase. The weather has been very warm for the last few days, owing to the extensive fires now raging in the mountains. We are now in the midst of the fruit season. The vineyards are furnishing the luscious grapes in the greatest abundance. Large shipments will continue to be made to San Francisco by every boat during the balance of the season. The regular and systematic arrival and departure of the steamers now on the coast will offer great facilities to fruit shippers, and obviate the serious losses which have befel them in years past.

Surveyor Washburn arrived in town a day or two since, from the Mohave country. He is still prosecuting his labors in that region. Mr. Hancock returned from the San Juan Capistrano yesterday; he has completed his surveys in that direction. There has been effected a complete survey, from San Buenaventura south to San Juan.

Santa Barbara.—The Gazette gives the following description of Santa Barbara county, and the facts offer some inducements to settlers: The climate is one of the finest in the world. The fertility of the soil and its adaptation to every agricultural product cannot be excelled. What we most stand in need of is an increase of population. The laboring class are most needed here at present. There is every inducement offered to the settler in this portion of the State; a healthy climate, rich soil, and thousands of acres of good agricultural land as yet untouched. Within two day's sail of San Francisco, we have a ready market for all articles of produce. There is no doubt that the grape will be the staple product of this section, but it has been ascertained that other products can be cultivated to equally as good an advantage. The fields of tobacco in the vicinity of San Buenaventura are, we think, superior to anything that can be produced in California. Wheat, barley, and Indian corn grow luxuriantly, and the yield of the present season exceeds that of any year previous.

The Gazette urges the digging of Artesian Wells, and says that at some seasons the water is much needed for the purposes of irrigation; and from the geological structure of the region, it seems probable that, in many places, a bountiful supply could be easily obtained at a moderate expense. No experiment in digging Artesian wells has yet been made in this locality.

Humboldt Items.—From the Times of the 18th inst., we select the following paragraphs:

Vegetable Precocity.—At the farm of Mr. Lewis R. Wood, can be seen five gooseberries, on bushes which were planted last February from cuttings. On Dr. Lindsey's farm, there are peach grafts which were engrafted last March, and have grown since that time upwards of eight feet. The Doctor has a considerable number of thrifty apple, pear, and peach trees, obtained from cuttings.

Flax.—Capt. Ticknor presented us yesterday a sheaf of flax, grown on his farm near Table Bluff, which for rankness of growth surpasses any we ever saw—it averages over four feet in hight. The fibre is very superior. Capt. Ticknor informs us that two crops a year can be raised. He planted on the 12th of May and harvested on the 12th of August—three months.

Nurseries.—We visited the nursery of Doctor Lindsay a day or two ago, and were surprised to see that he had paid so much attention to the cultivation of fruit trees. He has a large assortment of peach, apple, currant and pear trees, and an extensive vineyard, most of which will be in bearing next year.

Another Whale.—The steamer Mary Ann captured another whale on Tuesday, which will make seventy barrels of oil. Success to the enterprising men who are engaged in the business.

News for Sportsmen.—While at the Sulphur Springs of Napa, we met several gentlemen returning from their sports, their hunting bags being well stored with quail and other game. An ordinary sportsman can bring his three four and five quails at one shot. The streams in the mountains abound with trout. Pic Nic parties are daily made up at the Springs, and they leave their quarters and pass the day hunting and fishing—cooking their meals—returning at night refreshed and gratified with their day's ride and rambles. Deer and Antelope come down from the mountains and approach close to the house, in order to drink of the sulphur water. Having imbibed the taste, they "thirst" for it.

The Crops in Oregon.—From the Standard we learn that the farmers up the valley have nearly completed their harvesting. The wheat crop is generally good. The most prominent exception is in Yamhill and [illegible] as many have supposed. There is some complaint in the Umpqua Valley and the drought in that section is said to be very great.

Trotting Match for $5 000, over Centreville Course, L. I.—*Twenty Miles in an Hour.* Lady Fulton against Time.—J. D. McMan named b. m. Lady Fulton.—This great contest came off on Thursday, July 12, and it was one of the most exciting races that has taken place on Long Island since the celebrated trot of Trustee, who trotted twenty miles in 59 minutes and 35 1-2 seconds. The Lady Fulton was victorious, winning the race in 59 minutes and 55 seconds, showing extraordinary speed and endurance. While she was exercising up and down the track all sorts of bets were made. Time was the favorite, $100 to $40, which found numerous takers. There was a large amount of money lost. One wager of $500 to $100 was made that the mare would lose. She was in fine condition after the race, having scarcely drawn a long breath. There was quite a large attendance present to witness this performance, and all were well pleased but the losers. Annexed will be found an accurate record of the time of each mile, and also the aggregate, carefully prepared:

Miles.	Minutes.	Seconds.	Aggregate Minutes.	Aggregate Seconds.
1	2	52	—	—
2	2	53	5	—
3	2	56	8	43
4	2	54½	11	37½
5	2	58½	14	36

10	2	57½	29	37
11	2	56	32	33
12	2	58	36	31
13	3	02½	33	33½
14	2	57½	41	31
15	3	02½	44	33½
16	3	03½	47	37
17	3	07	50	44
18	3	06	53	50
19	3	07	56	57
20	2	58	59	55

The Calaveras Chronicle gives the following description of a Nutmeg Tree recently discovered in that section of country, and which is said to be very abundant. It says:

We were recently shown by Mr. John Hanson, a branch taken from a tree of the nutmeg species, containing a cluster of the fruit to the number of seven. The tree from which these nuts were taken, was discovered a short time since by a man engaged in working on the Mokelumne Hill flume, about fifteen miles distant. There are two trees standing near to each other, very nearly of the same size, supposed to be about thirty feet in height, and the trunks two in diameter. In appearance they closely resemble trees found in the torrid zones, shooting up in a single stem a distance of twenty feet before giving off any branches. The leaves are of the most beautiful deep green on the upper side, lighter on the under, are narrow, about two or three inches in length, and are arranged alternately upon foot-stalks from a foot to a foot and a half in length. It is a difficult matter to determine by what chance these trees should, in the first place, have found their way so far from their native clime; and most strange it is, [illegible] been supposed that they were indiginous to the torrid zones. The nutmegs of commerce are procured from the East India Islands, principally from the molucca group. When mature, they are subjected to a process of curation, whereby they are deprived of the power of germinating. As they are easily propagated from the seed, persons having gardens or grounds would be well rewarded by procuring the fruit as soon as it is matured, and treating in the same manner as the peach, or any other of the nursery seeds.

Mowing Machine Trial.—The first trial of machines competing for the Massachusetts premium of $600 has been had, and the result seems to be in favor of Manny's machines, in competition with Ketchum's, Russell's and Allen's. The horses of both the latter appeared to labor much harder than with the other machines, and the report says:

"There was a necessity for an additional heavy man to assist in managing Allen's machine, which was looked upon as a great drawback. The second mode of trial was by allowing each competitor to cut a single swath through the field and back again, and then examining the ground after the hay was removed by a horse-rake. In this trial the machine of Manny showed a closer cut swath, and evidently was considered by the spectators generally as the best machine."

It is true that these trials do not prove any one machine decidedly the best; but when the public find that one is a general favorite and that another always has some "drawback" connected with its operation, they will form a better idea which to buy than they can from any amount of puffing by the proprietors or interested parties.

San Diego as a Whaling Station.—Thomas S. Andrews, master of the whaling bark R. A. James, recommends San Diego as the best Port on the Pacific for the refitting of whaling ships. Wood, water, and provisions, in any quantity, are to be had there on the most liberal terms, he says, while game and fish abound in the immediate vicinity where vessels lie at anchor; and a ship of any size may be hauled upon a [illegible] dock, where at low tide the whole of her bottom and sides may be cleaned. The San Diego Herald adds, that Capt. Andrews carried the first American ship into the harbor of [illegible] Pacific, and [illegible] has repeatedly [illegible] a Steamship Company have [illegible] their depot, [illegible] the whaling recruit there.

State Agricultural Society,

OFFICIAL NOTICES.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is boped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should he without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

O. C. WHEELER, Rec. Sec.
Sacramento, June 23d. 1855.

Agricultural Visiting Committee.

At a meeting of the Executive Committee of the State Agricultural Society, held this day, Gen. C. I. Hutchinson of Sacramento, Rev. A. H. Myers of Alameda, Hon. Sherman Day of Santa Clara, Hon. W. W. Snow of Santa Cruz, and Gen. Allen of Yuba, were elected a Committee for the examination of Farms, Orchards, Vineyards, Nurseries, &c., which may be entered for premiums at the ensuing Fair. Although the time for such entry has expired, yet the Committee is instructed to receive propositions for such entry until the 15th August, being *bound*, of course, to visit only those which may be within their range. Special pains, however, will be taken to answer all special requests. O. C. WHEELER, R. Sec.
State Agricultural Society's Rooms, July 27, 1855.

A Call

To every organized County Agricultural Society

I AM instructed by the Executive Committee of the State Agricultural Society, to ask the earnest co-operation of every County organization, and to ask of the Corresponding Secretary of each such information of their several Societies as will make known to the Executive how much their Counties will do to further the interests of the Exhibition—what products, what stock and what manufactures may be expected from their several counties; and to solicit an active co-operation in this great work. It is also very desirable that special delegations should be appointed to attend the Fair and to act in convention, and thus aid in promoting and advancing all the great and important interests involved.

The Secretaries or other officers of each County are particularly desired to reply to the call at the earliest moment.

Per order of Executive Committee.

JAMES L. L. F. WARREN,
Corres. Sec. State Agricultural Society.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co. have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, meluding stock and persons neeessarily accompanying the same.

Every thing of like liberality from our citizens in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. HUTCHINSON, President.
SACRAMENTO, July 5th., 1855.

MEMBERS TO THE STATE SOCIETY.—One of the plans to promote the usefulness of the State Society, is to aid them by the value of membership, and this is one of the sure ways to prove your interest and your wish for its success. Gentlemen who desire to give this evidence of their wishes, can call at the Rooms of the Society on Fourth street, between J and K, or address us, enclosing $10 by mail. This amount entitles them to all the privileges of a member, and they and their immediate families to an admittance to the Society's Exhibitions. We hope many will come forward, voluntarily, and enroll themselves.

Deferred Articles.

Post Offices.

CONJUGAL LOVE.—The following is from the Journal of a gold digger in California, January 24th, 1850: "A mail agent has come in to-day, and still no letters for me. It is now thirty-nine weeks since my last letter from home was dated. I would purchase one line from my wife with all the gold I have made during those thirty-nine weeks, February 4th. This is a day to be remembered. Letters from home. If any would learn the full significance of the words, let him pass ten months in California without one word from his loved ones, an unhappy exile from his family.

It is an era in the mines—the arrival of the mail agent. How cheerfully are our two dollars a letter paid. It was like receiving back my family from the dead—those letters, after so long and weary a silence. I am happy; and I am miserable. I am calm; and I am fearfully excited. It is an era in a miner's life when such although tardy messenger reaches him. I have been present when many of these have given their treasures of love, or their burden of wretchedness. One has just opened his letter, and burst into immoderate weeping. I inquire the cause. "My wife and child are both dead!" A physician of one of the hospitals told me, that they dared not give their letters from home to those who were very sick; that in several instances they had seen persons in this condition read their letters and turn over and die.—*Puritan Recorder.*

We publish the above as the true estimate put upon the value of a "letter from home," and as we know how cheerfully money is paid for letters or papers—that the cost is nothing—we feel the value of efficient mail routes, good post-offices and plenty of them; able post-masters and frequent mails. Nothing is more conducive to the building up of any place, and making people contented and happy, than a frequent and certain intercourse with their kindred and friends of other places. A city, or town, or village, denied the usual mail facilities, will soon become deserted, the property depreciated, and grass grow in the streets.

In many places in California it requires longer time to obtain an answer from a correspondent than it does from New York or Cincinnati. It requires *a month* to obtain letters from San Luis Obispo and other similar places; and in many other places, along our rivers, among the farmers and miners, there are little or no facilities. This ought not so to be. In mercy to the hardy yeomanry and the miner, we pray that these evils may be rectified—*it can be done.* There could be sub-post-offices every ten miles, when post-[illegible] employed to convey letters and newspapers to all within the circuit of this sub-post-office, from the main office. The duty of the government is to provide suitable facilities to the people, and should not this matter be one of paramount importance? The contentment and prosperity of the people is the security of the government, and there is no one subject that so disturbs people in the interior and makes them dissatisfied with the country as this disregard of their wants. The Press are at fault in this matter—for with such facilities as should be established, our newspaper circulation, that "great educator in the affairs of life," would be increased four-fold. This fact, however, should be borne in mind: the newspaper distributions in our post-offices are not considered of sufficient moment to require so very prompt or careful attention as the waiting expectant demands. Large quantities of newspapers are lost for want of due attention; and in the country offices they are so exposed that not a moiety of them ever reach their rightful owners. Quantities are laid upon the counter, and if not called for just when the mail arrives, and some one wants that particular paper; it is very easy to tear off the cover, give it to the friend, or sell it—consequently *the paper never comes.* Then the paper is discontinued, the publishers are blamed, and they have to suffer the loss. And why? Because the question is not, "is he honest, or is he capable;" for the spoils belong to the victor, and old newspapers belong to the post-office!

Will post-master Weller kindly regard the sufferings of the farmers and miners?

JAPAN PEA.—This new and rare article is found to be adapted to our soil and climate, and yields bountifully. The writer has counted on an average 300 pods to each plant—pods containing from two to three peas. They are small, round, of a cream color and very hard. Should think they might be ground. They are very nutritious. The plant attains the hight of about thirty inches; it is stiff and woody—unlike all other peas; it stands independent of all surrounding objects, and upright, like a shrub or small tree. Experience will prove the best manner of cultivating and harvesting. It should be planted or sown about the usual time of planting corn, not earlier, as frost is fatal to the young plants.—*J. W. Briggs, in Genesee Farmer.*

A Specimen of California Workmanship.

IN our walks around the docks and among the shipping we noticed the old favorite steamer New World of '50 and '51 memory, looking as new, gay and beautiful as when fresh from the ship-builder's hands; and upon being politely invited by her excellent commander, Capt. Samuel Seymour, to inspect the alterations and improvements lately made, went on board for that purpose, and we now take great pleasure in presenting to our readers, the result of our hasty visit. It may not be uninteresting to know that the entire machinery of this steamer was *manufactured in California*, and the work would really reflect credit upon any manufactory in the world. We give below the dimensions of the castings and wrought iron work, and we think it will prove most satisfactorily that we are not behind our Eastern friends in the arts and manufactures. The cylinder is 48 inches in diameter with 11 feet stroke of piston, requiring over 8 tons of heated metal to make the casting; the cylinder bottom weighs 2 tons, and attached piston, 1 ton; the beam skeleton is a remarkably fine and smooth casting weighing 1 ton, the beam strap is of heavy wrought iron, made from blooms manufactured on the spot—its measurement is 5 inches in width by 3 1-2 inches in thickness, and weighs about 4 tons—and judges of this sort of work speak of it as one of the most masterly and perfect specimens of wrought iron composition every made in any country. The condenser is a masterpiece of casting and weighs 4 tons.

To the curious in these matters, we would certainly advise a visit to the New World—it will well repay them—and as Californians we should view with pride and interest these manifestations of improvement and prosperity. The whole of the machinery was manufactured at the Pacific Mail Steamship Company's works at Benicia, and we have the authority of Captain Seymour, and the chief engineer, Mr. Wm. Van Wirt, in stating the whole "works to a charm," and is in every particular perfect.

The establishment of works of such magnitude in this country, that can, as will be seen by the above, accomplish the manufactory of the largest class of machinery, certainly entitles this company to the highest meed of praise.

The furnishings of carpets and tapestry work are of the most elegant description, and from the warerooms of Frank Baker; the panneling, painting and veneering are extremely tasteful, and she is now, in every particular, as complete and perfect as when first seen upon our waters.

We take pleasure in copying the above notice of the steatmer New World, as she once more glides upon the waters of the Sacramento. Often have we spoken of the resources of California, her ability to furnish everything needed for advancement, independent of any other State. We have urged public attention to the necessity of encouraging every branch of home manufacture, and rejoice to know that attention is being given to it.

Some months since we paid a visit to the Benicia Iron Works and gave an extended notice of them at that time, and also directed the attention of farmers and machinists to them. We did so because we believed that the establishment could turn out work equal to any in the world. The finished works, and of such gigantic specimens, as has been furnished to the New World, is a proof that better times have come, and we may again say to all, "encourage home manufactures."

All that our cotemporary has said of this magnificent steamer is true, and we can add that we esteem her the fastest boat and indeed the "pride of the Sacramento." Although it is very difficult, and sometimes dangerous for an editor to particularise, yet we shall ever speak sincerely on these matters.

While speaking of this steamer we feel confident we are right in asserting that for elegance, speed and comfort, there is no line of steamers in the United States, that can surpass the boats on the Sacramento. And for skillful and courteous commanders and officers, few are their equals.

NEW CARRIAGES.—Our friend Dr. O. H. Peirson has just received fourteen Buggies, two Barouches, and two side-seat Buggies, direct from the manufactory, all in the most complete order and of the most finished workmanship, which he offers for sale on very reasonable terms. We have examined these carriages and consider them equal to any offered in this market. Persons in want of anything in his line will always do well to drop in at the Excelsior Stables.

We copy the above from the Marysville Express, and can say that we saw these beautiful carriages as they were being uncased, and they are all they are represented. Dr. P. has two fine stables—one livery stable amply supplied with the very best horses and carriages to let, and one boarding stable, so that all can be supplied. Dr. P. also does an auction and commission business in stable stock.

ADVANCE OF LITERATURE.—California can boast of newspapers printed in French, Spanish German and Italian languages. This in addition to the host of papers printed in our own language is surely some evidence that we are not behind the age.

To the Voters of California.

A CORRESPONNENT of the Charleston Courier relates the following interesting circumstance, connected with Gen. Washington's last vote:

"I was present when Gen. Washington gave his last vote. It was in the Spring of 1799, in the town of Alexandria. He died on the 14th of December following. The Court House of Fairfax county was then over the Market House, and immediately fronting Gadsby's tavern. The entrance into it was by a slight flight of crazy steps on the outside. The election was progressing—several thousands of persons in the Court House yard and immediate neighboring streets, and I was standing on Gadsby's steps when the Father of his Country drove up and immediately approached the Court House steps, and when within a yard or two of them I saw eight or ten good-looking men from different directions, certainly without the least concert, spring simultaneously and place themselves in positions to uphold and support the steps should they fall in the General's ascent of them. I was immediately at his back, and in that position entered the Court House with him—following in his wake through a dense crowd to the polls—heard him vote—returned with him to the outward crowd—heard him cheered by more than two thousand persons as he entered his carriage, and saw his departure. There were five or six candidates on the bench sitting, and as the General approached them they rose in a body and bowed smilingly, and the salutation having been returned very gracefully the General immediately cast his eyes toward the registry of the polls, when Col. Deneale, I think it was, said: 'Well, General, how do you vote?' The General looked at the candidates and said: 'Gentlemen, I vote for measures, not for men,' and turning to the recording table audibly pronounced his vote, saw it entered, made a graceful bow, and retired."

FROM THE PLAINS.—We had the pleasure of a call (says the Marysville Herald) from Mr. Jacob B. Clark, of Polk county, Missouri, who has just crossed the plains with a drove of cattle. Mr. Clark left Missouri on the 11th of April, with three hundred and sixty head of good stock cattle, and succeeded in reaching Truckee Lake with two hundred and sixty-two. The drove is, at present, at the lake, the pasture being rich and plentiful. The lost cattle died of diseases and fatigue, and a few of them were sold, when worn down, at very cheap rates, to the cattle dealers on the desert. Mr. Clark represents the ravages of the grasshoppers as having been dreadful on the plains, and particularly on the valley of the Humboldt. The route from Truckee Lake, through the Downieville Pass, is in good order for traveling, excepting some ten miles, immediately on this side of the lake, which is rough, though not steep. The emigration this season according to Mr. Clark, is exceedingly limited; if as extensive as that of last year, the scarcity of grass, occasioned by the grasshoppers, would have rendered it impossible to bring the horses and cattle through. The Indians gave Mr. Clark no annoyance, though the Sioux had stampeded one or two droves on the Platte. No United States troops had reached the scene of Indian depredations when Mr. Clark came through, though they were hourly expected.

We have met several of this party in Yuba county, and they give a general good account of the trip. Some very fine stock will find its way over the plains, but far less than usual.

We gather the following items from our exchanges:

Mr. Brown, from Missouri, and some others, have arrived at Marysville, with some 1,000 head of stock. They contradict the murders and corroborate Mr. Clark's statement.

Mr. G. W. Gilbert arrived in this city from Kanesville, Iowa, whence he left May 6th. He reports grass plenty, water scarce—lost but one mule. Met the train of Major Ormsby, of this city, July 4, all well. Mr. G. has made two trips previously. He brought seventy head of stock.

BENICIA FEMALE SEMINARY.—We feel it a duty to call the attention of parents to this most excellent institution. It is now in a most prosperous condition, having over forty pupils. Additional rooms are being erected and prepared in order to accommodate the increasing demand for entrance to its privileges. Miss Mary Atkins is sole proprietor and Principal. The primary department is under the charge of Miss Vaughn, the languages and painting under Miss Pettibone, and music by Miss Lepfgeer. Each of these young ladies is fully qualified for her department, and it can be said of this Seminary, that in all its departments, it is equal to any in the State. Benicia being exempt from the noise and bustle of other cities, and always healthy, pupils enjoy better health; and the scenery, atmosphere, and all the surrounding associations are such as to peculiarly fit this place for education.

We hear it is in contemplation to have a school for boys. This will be a most excellent plan, for with this addition—a brother at one institution and a sister at another, a guardianship and affectionate care can be exercised in this relation that will be of great good. We are most happy to note the increasing attention paid to education, and shall always do all in our power to aid.

Miscellany.

A SPINNING-WHEEL SONG.

AIR—"*The Little House Under the Hill.*"

I.

MELLOW the moonlight to shine is beginning;
Close by the window young Eileen is spinning;
Bent o'er the fire her blind grandmother, sitting,
Is crooning, and moaning, and drowsily knitting—
"Eileen, achora, I hear some one tapping."
"'Tis the ivy, dear mother, against the glass flapping."
"Eileen, I surely hear somebody sighing."
"'Tis the sound, mother dear, of the summer wind dying."
Merrily, cheerily, noisily whirring,
Swings the wheel, spins the reel, while the foot's stirring;
Sprightly, and lightly, and airily ringing,
Thrills the sweet voice of the young maiden singing.

II.

"What's that noise that I hear at the window, I wonder?"
"'Tis the little birds chirping the holly-bush under."
"What makes you be shoving and moving your stool on,
And singing all wrong that old song of 'The Coolun?'"
There's a form at the casement—the form of her true love—
And he whi pers, with face bent, "I'm waiting for you, love;
Get up on the stool, through the lattice step lightly,
We'll rove in the grove while the moon's shining brightly."
Merrily, cheerily, noisily whirring,
Swings the wheel, spins the reel, while the foot's stirring;
Sprightly, and lightly, and airily ringing,
Thrills the sweet voice of the young maiden singing.

III.

The maid shakes her head, on her lips lays her fingers,
Steals up from the seat—longs to go, and yet lingers,
A freightened glance turns to her drowsy grandmother,
Puts one foot on the stool, spins the wheel with the other.
Lazily, easily, swings now the wheel round:
Slowly and lowly is heard now the reel's sound;
Noiseless and light to the lattice above her
The maid steps—then leaps to the arms of her lover.
Slower—and slower—and slower the wheel swings;
Lower—and lower—and lower the reel rings;
Ere the reel and the wheel stopped their ringing and moving,
Through the grove the young lovers by moonlight are roving.

Dublin University Magazine.

[For the California Farmer.]

A Dream.

I STOOD upon a noble steamer's deck. The moon shone lustrously—here and there fleecy clouds sped quickly across the deep blue, hiding as they passed the diamond drops that hung in the vault above, and sometimes they would cast a slight shade upon the deck where I stood. The sea, glorious ever in its quiet beauty, was only moved by slight ripples.

The waves came dancing o'er the sea,
In bright and glittering bands;
Like little children, wild with glee,
They clapped their dimpled hands.

Far as the eye could reach was one vast ocean, bounded by the horizon only. Not a spec upon the broad space: our steamer stood alone, "monarch of the ocean." I gazed upon the beautiful scene, long and happily, for it was "beautiful." It bore the impress of Deity. Grand as it was, there was one chord more wanting: the scene was too beautiful to enjoy alone. The human heart ever yearns to give utterance to its feelings, its admonitions of the beautiful. But I was alone!

Would that some bright spirit might come and enjoy this scene with me, were the thoughts that were forcing their way from the heart. I looked abroad—the noble steamer was cutting her way through the deep, casting the foam from her breast, that seemed "like a mantle laced with gems." I felt the loveliness amid all this beauty, and the thought of a moment before found utterance in words. Scarce had this passed my lips, when I saw, issuing from the saloon of the steamer, a maiden, bearing in her hand a guitar. I had moved but a step or two forward to pay that respect and homage ever due to beauty, when with a smile, she said—"I have come, sir, to beguile your weary moments; for the spirit whispered me you were sad, even among this beauty. Come, sit by me, and I will sing to you: perchance I may touch some chord of memory that shall drive away your sadness. If so, I shall have performed my mission."

I shall not soon forget those features, for they wore an expression then that will "never pass away." Adjusting the guitar, she looked at me and said, "shall I sing." I bowed in token of approval: when, placing her hand upon the instrument to move the chord, a ringing sound was suddenly checked, for the "silvered chord had broken." A flush passed over her beautiful face, and a tear stood in her eye as she said, "the chord that is now broken can never be replaced." With respectful gentleness I tried to soothe the fair songster and to request her to "try to sing with one chord the less." In the effort to accomplish this, and to keep the instrument in tone, *another chord was broken!* Now, there was no tear, but a brightness shone upon her face, as the effort was made to draw music from her favorite. She rose saying, "I will have music yet;" and at a single touch two more chords sent a requiem note as they snapped from the tightened keys that confined them. Two chords only remained. "Can I not draw from these a meaning note," said the fair creature, as with pallid cheeks she essayed to play. I saw her movement was that of one whose mind was wrought up to the brightest pitch—another touch and another chord snapped. She looked at me saying, "I cannot sing that song to night." I saw the gathering storm of feeling, and was about to speak; when, as I turned, the *last chord broke.* I rose, for I saw a deadly pallor spread over her face. I moved forward to catch her, for I saw the guitar fall from her hand, and she, fainting and in tears, rested upon my heart—a gasping struggle—tears gushed forth—she wept freely—the scene was one of deepest feeling; and in the excitement of the scene I awoke. The tears upon my pillow spoke of sympathy—even in a "dream." MELODIA.

From the "SPIRIT'S JOURNAL,"
May 16, 1855.

EXECTUION OF THIRTY-FIVE HUNDRED CHINESE REBELS NEAR CANTON.—Mr. Silas E. Burrows, Jr., who has just returned to this city, after an absence of nearly two years, the greater portion of which time he spent in China, was an eye-witness to the execution of thirty-five hundred Chinese Rebels, who were taken prisoners in the battle near Canton in the month of March last. The prisoners were taken to a low marshy island, and there each was compelled to undergo a form of trial before a tribunal of Mandarins, and each was sentenced to death by decapitation. One by one they were led forth to the execution ground, a large space covered with sawdust to the depth of several inches. To give a greater degree of awful effect to the scene, an elevated platform was erected, consisting of a single narrow plank, over which each unhappy victim had to pass in full view of his fellow captives, whose terms of existence, whether an hour or a day, depended entirely upon the will of their captors. The prisoners manifested the most stolid indifference to everything connected with the scene, apparently as unconscious of their terrible fate as dumb brutes going to the shambles. Arriving at the execution ground, the captives fell upon their knees, and bending forward, calmly awaited the single stroke of the executioner's sword that severed head and trunk—body and soul. There were no shrieks of terror, no supplications for pardon or mercy. From the moment of capture the captive knew his doom, and sullenly awaited its accomplishment.—*S. F. Herald.*

NATURAL BRIDGE.—Among other California curiosities, the Shasta Courier states that a natural bridge has been discovered near Watson's Gulch, in Trinity county, which is described as being 63 paces through, 16 paces in width; from the bottom of the gulch to the arch, about 20 feet; and the entire height, from the bottom of the gulch to the top of the bridge, about 100 feet. On the right hand as you enter the arch from the east side, in an apartment about 14 feet long by 10 feet in width, and 7 feet high, in which there are quite a number curiosities in the shape of [illegible], &c. No Digger, either male or female, ever passes here without depositing either a stick or stone on the top of some rock near this bridge. About half way from the top of the arch to the top of the bridge is another cave or apartment, but which, because of its position, has not as yet been examined. The bridge is composed entirely of limestone. The water flowing beneath it is of a most excellent quality—making the teeth ache because of its excessive coldness.

REAL ESTATE in Marysville is improving. The Express says the number of stores and dwellings erected the present season has no parallel in the history of the city, and points unerringly to her prosperity and future greatness. The advance in property for building purposes, both in the business portion of the city and in the suburbs, will not fail to strike the reader as a sure indication of its prosperity. A number of sales of real estate have been effected during the past week at good prices, and a large portion of the property will shortly be covered with brick buildings.

CALIFORNIA BUILDING MATERIAL.—In a recent report of Messrs. Burr, Pardee & Chenery, relative to the present and prospective condition of the Sacramento Valley Railroad, it is stated that at the crossing of the American River near Negro Bar, the eastern terminus of the first division of the road, are inexhaustible quarries of granite of the best description, and perfectly accessible. This granite can be placed in San Francisco, with the road in operation, at half the present cost of building stone in that city, and can be delivered in Sacramento at the present cost of brick.—*Sun.*

NEW VARIETY OF WHEAT.—The Grass Valley Telegraph mentions the receipt of several ears of wheat raised on Corum's ranch, about seven miles from Nevada, on the Auburn road. It says: The largest head weighs five pennyweights and four grains, and consists of one main head and twelve branches. The kernel is remarkably plump, and of a bright yellow color. The seed seems to be an entirely new variety, and was brought here from Salt Lake. Specimens will be exhibited at the Agricultural Fair, at Sacramento.

A VERY loquacious lady once offered to bet her husband fifty dollars that she would not speak a word for one week. "Done!" said the delighted husband, staking the money, which the lady immediately put into her pocket, observing very quietly that she would secure it until the wager was decided. "Why madam," cried the husband, "I have won it already." "You have mistaken the time," said the lady; "I mean the week after I am buried."

Ladies' Department.

☞ To our Lady Correspondents.—We shall be most happy at all times to receive communications upon every subject touching "home blessings and comforts," the subjects of Education, Domestic Cookery, and Housewifery in all its departments; Essays upon the influence of the Mother, Wife, Daughter and Sister. These all will be most acceptable, and their publication tend to a more enlightened education upon such subjects. Writers can indulge their own feelings either in Poetry or Prose. It is our desire and intention to occupy two or more columns to the "Ladies Department," weekly, and we trust there are many very able writers that only need to *let their light shine* to be known and honored in this land. As our journal is intended as a "Family Paper," we trust this subject may be esteemed worthy those to whom it is addressed.

Youthful Recollections.

BEAUTIFULLY through the vista of a few short years comes floating back upon me the reminiscences of my happy childhood. Lovely visions greet me, visions of rainbow coloring; glimpses of my dear old childhood's home, all sunshine, my ears saluted by the birds warbling of the past. Nestled far away, amid clustering hills of New England, ever rich with verdure, stands the quiet old red farm house of my aged father. The gray moss clinging to the roof, and the tall elms, of almost centuries' growth, are lovely still in my eyes, for they whisper of the loved and the lost, those playmates of my childhood's hours. Some of our household band, sweet sisters and manly brothers, now slumber in the cold dreary churchyard—their spirits returned to the God who gave them, those dear, cold, rigid, outstretched forms elasped in the embrace of Death, that grim monster, O! I even now shudder at the slightest recollections. Under the old elms that shaded the farm house, have the household group sat on the starlight night, and talked of the far-off and unseen of the spirit world, of the homes of the blest far away amid the blue ether, and of that day when the heavens shall be rolled together like a scroll, till to our fancy we heard the distant music of the heavenly choir, and saw in imagination the gleaming of white-robed objects among the branches of the stately elms. Within a stone's throw from my father's sequestered domicil stood the house of God, a simple country church rearing its time stained walls and weather-beaten front amid the forest trees which clustered thickly around on either side. There, upon the Sabbath morning, congregated the untutored rustics of old Father Loren's parish, and listened, with hearts panting after the truth, to the palsied old man's simple but persuasive language. Those days no organ was heard, with its lordly peal breaking upon the solemn stillness of the Sabbath day, but the passer-by would listen to the tide of song, sent forth from all present with a harmonious blending. No separate choirs, for a few beauties, was then reared in their midst, for their song was the song of the redeemed—that song which is dearer, richer far to the Christian's heart than untold gold. Glory to the Lamb that was slain welled up from [illegible] their treasures in Heaven. Then arose the deep tones of the officiating divine, exhorting his dear people to strive after the attainable, to pray for purity and n nearer alliance with their Maker; after which came the earnest prayer, the apostolic benediction—and each one compassing the little assembly departed, without ostentation, to their humble homes, holier feelings agitating their breasts, all being better and wiser; and with all comes floating back upon my memory, the sweet, bright face of Miss Laura, which often haunts my midnight dreams. Much like an angel she looked in her pure dress of spotless white, the long tresses of her golden hair forming almost a *halo* of glory around her brow. The little white school house over the hill was enlivened and beautified, as with an angel's presence; the sunlight, streaming in at the broken pane, looked brighter, and even noisy Cousin Ned grew quiet and gentle beneath her smile. After cross old Mr. Godwin we almost considered her a descendent of the "better land;" however, we knew she was of the earth—earthly, for just over Willow Brook stood the white cottage of Laura's poor crippled mother; from beneath its clustering woodbine Laura's bright eyes often peeped forth, as she awaited the coming of Squire Hanly's scape-grace son. Laura supported her mother by teaching, and Frank Hanly supported Laura and her mother to church; —and "once upon a time" a loud wail went forth from the little white school-house, as Laura was borne one bright May morning to church, and borne back again, with a face wreathed with smiles, to Woodbine Cottage, Mrs. Frank Hanly. The Squire said he hoped Frank had sowed the last of his wild oats, and would quietly drag them in. I little thought then that I should ever leave my sunny childhood home and those well frequented paths to be trod by strangers, or that I ever should journey so far toward the occident, or sit by the artemesian fire, watching the lightning play around the crags of the Rocky Mountains, or listen to the lowing herds in the broad Valley of the Sacramento, which separates me from home, by many a league. But my childhood days were very happy ones. There have been some sorrowful days since in that happy home. Life is made up of as many farewells as sunny hours. My young days passed with alternate sunshine and shade. Lord keep my memory green, shall ever be my prayer; and O! may the years of my life passed under my parental roof never fade from my vision; but may my heart, clinging to thee, ever turn in thought to thy quietness, as an oasis in the desert life!—*Alice in Marysville Express.*

THE tactirn female of the porcine genus imbibes the richest nutriment.

Miss Fortune's Opinion.

WE give space to the following communication without a critical review of the subject in question, or its tendency. We shall be glad to have the real name of the writer, and to hear from her again upon any subject, as we perceive she can wield the pen well:

"In what contrast," says an exchange, "is the protest of Miss Stone, to the following remarks on 'Woman's Sphere,' by Charles Dickens:"—

The true woman, for whose ambition a husband's love, children's adoration are sufficient; who applies her military instinets to the discipline of her household, and whose legislatics exerciso themselves in making laws for her nurse; whose intellect has field enough for her in communion with her husband, and whose heart asks no other honor than his love and admiration; a woman who does not think it a weakness to attend to her toilet, and does not disdain to be beautiful; who believes in the virtue of glossy hair and well fitting gowns, and who eschews rents and ravelled edges, slip-slop shoes and sad actions make ups; a woman who speaks slow and does not speak much; who is patient and gentle, and intellectual and industrious; who loves more than she reasons, and rarely argues, but adjusts with a smile; such a woman is the wife we have all dreamed of once in our lives, and who is the mother we still worship in the backward distance of the past; such a woman as this does more for woman's cause than all the sea captains, barristers, judges and members of Parliament put together. God-for-given, and God-blessed, is she.

My dear Dickens! a very beautiful picture, truly, and one that may be applied to the fair and fortunate; but it won't do for a general rule. Just think of the multitude of wives who are wedded to husbands (or rather house-banes,) that daily subject them to the vilest abuses. Think you that they can adjust all with a smile? They may; but I can assure you it will be a sickly one that will send its victim to a premature grave, and perchance leave a family of little one's to the cold charities of this heartless world. She had better have stormed like a very vixen, and have lived for her children.

Imagine a woman, of good sound intellect, wedded to an accomplished deceiver, with just brain enough to practice his art successfully: when, after marriage, the veil has been removed that deceived her, and she knows him as he is—do you think that communion with such a mind is field sufficient for her intellect? I think not; and yet there are thousands of just such cases. And what is her remedy—a divorce? No! oh, no! because that is lasting disgrace, or at least so some public opinion. Must she go abroad to seek communion with congenial spirits? No, no! worse and worse. Then what can she do; where is her remedy? Alas! she has none, so long as this state of opinion exists. Lucy Stone and others have been doing all they could to remedy this evil, and I, as a woman, for one, honor them for it. I only wish I possessed the talent requisite, I would spend the remainder of my days for the same cause, and feel that I was performing my duty to my fellow beings. A man that is unhappy, married, has many recourses; he can leave for some foreign place; he carries the purse; or he can absent himself from torment near home, and it is all right in the eyes of people; or he can be divorced. It is no disgrace for him—that is reserved for unfortunate woman.

Yours respectfully,
MISS FORTUNE.

TRANSIENT YOUNG MEN.—Girls, beware of transient young men; never suffer the addresses of a stranger; recollect that one good steady farmer boy or mechanic is worth all the floating trash in the world; the allorements of a dandy jack, with a gold chain about his neck, a walking stick in his paw, some honest tailor's coat on his back, and a brainless skull, can never make up the loss of a kind father's house, a good mother's counsel, and the society of brothers and sisters; their affections last, while that of such a young man is lost at the wane of the honeymoon.—*Evansville Journal.*

A CEMENT TO RESIST FIRE AND WATER.—Half a pint of new milk, and half a pint of good vinegar. Stir them together until the milk coagulates; remove the curd, and mix with the whey the whites of five eggs well beaten up; when those are well mixed, add sifted quick-lime until the whole is about as thick as potty. If this mixture be carefully applied, and properly dried, it will firmly join what is broken or fill up cracks of any kind, and will resist fire and water.

FRUIT-PIES.—No under-crust should be made to apple or any fruit-pie. It is always heavy and not fit to eat. Place a narrow rim of paste around the edge of the plate, and fill with the fruit, raw or stewed, and cover it. The juice will be retained much better, and it will [illegible] flour and butter. [illegible] is no trouble in these days; and what is of more [illegible] will save dyspepsia which [illegible] thing, they are taken [illegible]

TO ADVERTISERS.

In order that our patrons may have some idea of the extent of our circulation in this country and abroad, and the benefit which may be derived from advertising in our paper, we publish the following list as comprising most of the principal places in which our journal circulates, showing how useful it is to those who wish their business widely known:

San Francisco, Sacramento, Stockton, Marysville, Grass Valley, Rough and Ready, Nevada, Downieville, Yreka, Shasta, Columbia, Jackson, Sonora, Colusa, Sonoma; San Juan, Monterey county; Santa Clara, Santa Rosa, Santa Cruz, San Jose, Mission San Jose, Napa, Nicholaus, Benicia, Petaluma, Placerville, Pajaro Valley, Oakland, Alameda, Union city, Alvarado, Auburn, Bodega; Bidwells, Butte county; Hamilton, Ione Valley; Knight's Landing, Yolo county; Los Angeles, Monterey, Martinez, Uniontown, Humboldt Bay; Port Townsend, Oregon; Salem, O. T.; Oregon City, O. T.; Portland, O. T.; Washington Territory. To every Post Office and Express Office in this State, and to nearly every State and State Society in the Union. In addition to this it is sent to many of the principal cities in England, Scotland, Ireland, France and Belgium.

CONFECTIONARIES.—"Variety is the spice of life." So say the majority of this world's people; and we find a great mass of the people love the good things of this life, and all have a "sweet tooth." Confections are desirable on land or at sea, and the good people will have them. Among the world-wide famous ones for Candies, few are so prominent as Stewart & Dussing. Their various candies have a reputation for purity and excellence, and for keeping upon long voyages—in all climates—unequalled by any manufactory in the world. We can most confidently refer importers of these delicacies to this house in New York, in preference to all others. See their card in another column.

For many acts of courtesy, kindness and hospitality in our extended route through the great Valley of Napa, we return many thanks. We ask the indulgence of our readers for many deferred articles, and full reports of ranches, orchards and fruit gardens till our next number, when we shall give details of much value—not forgetting the "Pic-Nic" at Suscol Ranch, "Moonlight in the Valley," "Lion Hunt," and a quantity of gathered material; and especially the "Recherche Supper" via New World, which hangs around our memory still.

A GRIZZLY.—"Keep your distance sir." While on our tour up the valley of Napa, we learned of a large *Grizzly* that had come down from the mountains on several occasions, during the last few weeks, and had commenced making "sausage meat" of the swine in the neighborhood of Napa City. C. Van Pelt, Esq., Mr. White, and one other person had several Hogs slaughtered by his Brain Majesty. Efforts have been made to capture him, but thus far in vain.

On the 23d Aug., at Oakland, by Rev. Sam. B. Bell, Alex. Leonard, Esq., of Pittsburgh, Pa., and Miss Mary E. Wilson, of Michigan.

On the 23d Aug., in this city, by H. L. E. Pratt, Charles H. Seymour and Miss Ann Elizabeth Wood.

On the 20th Aug., in Butte sylvania, Sutter county, S. Sanborne and Miss Cynthia E. McMurtry.

On the 16th Aug., in Santa Clara, Mr. John Tower and Miss Charity Holmes.

On the 19th Aug., in Santa Clara county, Jacob Graves and Miss Margaret Elizabeth Statler.

DIED.

On the 25th Aug., in this city, Sarah Ann, daughter of James C. and Elizabeth Rogers aged 17 months.

On the 25th Aug., at Fort Point, San Francisco, Mrs. Sarah Ann Ashley, wife of S. J. Ashley, aged 24 years.

On the 19th Aug., in Mariposa, Henry Bradford, formerly of Vt., aged 26 years.

On the 17th Aug., at St. Ann's Ranch, Yuba county, Dr. A. Crane.

SPECIAL NOTICES.

☞ **Consumption Can be Cured!**—Sir James Clark, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a Cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other modern pathologists."

The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope, and reanimate failing courage in the heart of every sufferer from this disease.

The remedy which we offer has cured thousands.

WISTAR'S BALSAM OF WILD CHERRY, not only emanates from a regular physician, but has been well tested in all the complaints for which is recommended.

*** Be sure it is signed I. BUTTS on the wrapper.

Agents for San Francisco, B. B. THAYER & CO., and LITTLE & CO.

Sold by all Druggists. v4 8

☞ **Peruvian Febrifuge.**—The formula for this preparation is the result of practical observation and experience for a number of years, in the treatment and cure of Fever and Ague, and such has been the uniform success in its use, that no case is known where this valuable remedy failed to cure when timely administered. A single trial will afford relief, and a few doses convince the patient that he has found the real "El Dorado" of a permanent cure for Fever and Ague and the various other grades of Fevers.

v4-9 1m 146 Washington street, San Francisco.

☞ **Religious Notice.**—The "Pacific Baptist Church" (Rev. O. C. Wheeler, Pastor) will hold Divine Service every Sabbath, at 10½ A. M., and 7½ P. M., in "Temperance Hall," corner of 10th and J streets. The public is respectfully invited to attend. Seats free. v4-4

To the Creditors of Enoch Epps, deceased.

NOTICE is hereby given to all persons having claims against the late Enoch Epps, deceased, to exhibit the same, with the necessary vouchers, to me at my residence on the "Burns Ranch," in Napa Valley, in the county of Napa, within ten months from this date, or be forever barred.

WM. L. WEBSTER, Administrator.
Napa County, August 1st, 1855. v4-9 4t

MISCELLANEOUS.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hoderkins, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left with WARREN & SON, Sacramento, will be attended to.

The following certificate is among the number received; others can be referred to on quantities:

"This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing Grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
v4-9 3m Pine street, San Francisco."

THE
CALIFORNIA FARMER,
And Journal of Useful Sciences,

Published every Friday Morning, at the Office on Fourth street, Sacramento City.

THIS Journal will contain Valuable Agricultural Statistics, from all parts of the States, together with Original Scientific and Literary articles. The aim of the proprietors will be to make it an acceptable FAMILY PAPER, containing interesting matter relative to Household Literature, from several able lady correspondents.

To those who desire to make known the *real condition of California*, so as to induce kindred friends to come and settle in our State, the FARMER will be found to be very a valuable paper for mailing to the States.

New Invention!

Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, *i. e.*, nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 26 Third street, South Bench, near South Park.

Benicia Iron Works.

STEAM ENGINE, BOILER AND MACHINE SHOP.—This establishment is now in successful operation, and offers to the public facilities equal to any in the United States, for manufacturing or repairing Steam Engines of the largest size, Boiler Wares, Brass Castings, Mill Gearing of the most approved patterns, Bloom Iron, Cast Iron Columns, Window Caps or entire fronts.

Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State.

The company have extended their Pier, and erected a large crane for the accommodation of their customers.

For further particulars apply to

WILLIAM BAILEY,
Office, No. 79 Front street,
Manufactory, Taylor street, North Bench.
San Francisco, May 9th, 1855, v3-25

AGRICULTURAL, &c.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.
v4-2 CHARLES CAMPBELL.

Agricultural Tools and Seeds.

PARKER, WHITE & GANNETT, 17, 59 and 61 Blackstone street, Boston, Mass., manufacturers of Plows, Ox Yokes, Stone Trucks, Fan Mills, Horse Powers, Mowing Machines, Reaping Machines, Horse Powers, Churns and other farm machinery and tools; Sluice Fork, Grain Cradles, &c., &c. Also, growers and importers of all kinds of Garden and Field Seeds and Trees.

These seeds are of the very best quality, such as have always given satisfaction to our customers, and are put up for shipment in air tight cases. v3-18

Agricultural Warehouse,
193 *Front street, New York.*

Oil! Oil! Camphene.!!!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at 51 K street, Sacramento for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure genuine.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices [v4-1] WILLIAM BAILEY.

California Brooms.

"Encourage Home Manufactures."

THE undersigned are happy to announce to the community that they will offer to them about the 10th of August,

Three Thousand Dozen California Brooms.

These brooms are made from stock grown in California. The broom brush was raised in Sacramento county, (the queen of prairie land;) the handles from timber from our own mountains; and the work by our own citizens. We have, 'tis true, imported machinery for the manufacture of brooms; but hope ere long that the genius of California will produce machinery for all the departments of labor.

We shall have samples of our Brooms at the State Society's Rooms on Fourth street, and at our own store, when we trust our citizens will be happy to give preference to the home industry of California.

We shall commence immediately the work of manufacturing, and those who wish our brooms should send in their orders. They will be answered according to their date, as we expect sales as fast as we can manufacture them. We intend they shall be as good, if not the *best brooms* ever offered for sale in this State. LUSK & CO.,
v4-6 Corner of Fifteenth and O streets.

v3-24 J. L. POLHEMUS.

Latest Importation.
WE would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of
STAPLE AND FANCY GOODS
which have been received direct from the manufacturers and importers the last week, per clipper ships "Flying Cloud," "Samuel Russell" and "Red Rover," which, in addition to our former stock, renders it by far THE LARGEST IN THE STATE OUT OF SAN FRANCISCO! And for quality and cheapness we defy competition; and we say, with a fair of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.
200 Pieces Linen, Irish and Scotch;
100 pieces Fancy Bonnet Ribbons and Trimmings;
50 pieces Mourning Colors, Barages and Tissues;
85 pieces Fancy Barages and Tissues;
25 pieces plain and dotted Swisses;
40 pieces Figured and plain Jaconet;
865 yds White Lawns, $1 a Dress Pattern.

Mens', Youths' and Boys' Summer Clothing.
Manufactured for Retail Sale in New York, to be very best style.
BONNETS—Misses' Fine, Rich Hats, &c.
Together with a great variety of other Fancy Goods, for the Fourth of July celebration, too numerous to mention.
CHAS. CROCKER & CO.,
v3-36 244 J street, between Eighth and Ninth.

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets,.....MARYSVILLE.
☞ Open all Night. ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.
Its location is central, and is the General Depot of Staging and Steamboating.
Travelers can rely upon being *called in time* for any boat or stage leaving the city.
Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week	$12 00
do with lodging, per week	$15 to $20 00
do without lodging, per day	$2 50
do with lodging, per day	$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.	

v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.
THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.
The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choice of the market.
At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.
The Bar will be supplied with the best Liquors and Wines.
The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.
We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.
The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.
THIS HOUSE has been established *Five Years*, with out interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.
Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.
A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.
The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.
3v-16 1st C. M. DAVIS, Proprietor.

Merchants' Hotel,
Fire Proof Brick Building,
No. 60 K street, between Second and Third, Sacramento.
DAN BARNEY & LAND.....PROPRIETORS.
THIS House is the most central location in the city, and but a short distance from the Steamboat Landing.
General Opposition Stage Office.
Stages leave this House every morning for all parts of the Mines.
at the most reasonable prices.
Board.....$7 00 per week.
Board and Lodging, from.....9 to $14 "

v4 8

International Hotel.
THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.
Day Board—Ten Dollars per week.
This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.
San Francisco, Jan. 9, 1855. v4 7

Rassette House.
SAN FRANCISCO, ...CAL.
THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.
Gentlemen can be accommodated with single rooms, or families with suites of rooms.
The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

PHŒNIX STALLS,
In Sacramento Market.
Nos. 7 and 8.
New Brick Building, K street, above Third, south side.
The undersigned, in opening this new establishment, hope by giving unremitting attention to their customers, to merit a share of the favors of which they have heretofore been recipients to such a liberal extent. Their stock will comprise a full selection of the best Beef, Mutton, Lamb, Pork, Veal, Domestic Sausages, sugar-cured Corn Beef, &c., &c.
They will also have a supply of all kinds of Game and Vegetables, in their season. Purchasers can have their parcels sent to any part of the city, *free of charge.*
Orders attended to promptly.
v4 6 E. J. BOSLER & CO., Proprietors.

To Farmers, Hotel Keepers, Rancheros & Others.
BRADSHAW & CO., having removed into their New and Spacious Store, and being regularly supplied from the States by every clipper, enables them to have the largest and best stock of GROCERIES AND PROVISIONS in the State, and at Low Prices.
Persons living at a distance can always have their goods packed and shipped, free of expense. Remittances can be made through all the expresses or by mail. Our stock consists of
Powdered and Crushed Loaf Sugar;
Extra Green and Black Tea;
Mess and Clear Pork, in quarter and half barrels;
No. 1 and 2 Mackerel, in kits, qr and half barrels;
Sperm, Wax and Alamantine Candles;
Sperm Oil, in 5 gallon tins;
Stuart's Boston and New Orleans Syrups, in 5 and 10 gallon kegs. Spices of all kind; Assorted Herbs and Extracts, Java, Mocha, Manilla and Rio Coffee Cheese in tin; Chocolate, prepared and crushed Cocoa, and Shaker Teas, Pipes, Brooms, Ground Rock Salt, Pickles, assorted Preserves, Jellies, Jams and Pie Fruit.
N. B. Highest price paid for California Butter and Cheese, corner California and Battery streets, San Francisco. v3-36

Saddlers, Attention!
CHAS. R. SCHEINER respectfully informs the manufacturers of Saddlery that he is now prepared to do all kinds of stamping on Californian and Mexican styles of saddles, and he is confident that the style of workmanship cannot be surpassed in this State.
Please call and examine specimens.

Now is your Time to Buy Cheap Goods!
IN this city since 1850, and well known all over this section of country, take pleasure to inform their friends and customers in general, that they have now in store, and receiving in addition by every clipper and steamship, from New York, a general assortment of Fancy and Staple Dry Goods, consisting of plain black and brocade Silks; plain, changeable and plain colored Silks, all qualities; French and American Lawns; white and colored plain and embroidered Swiss Muslins; Barages and Silk Tissue of all colors and price; Needle Worked Bands, Collars, Sleeves, Chemisetts and Linen C. Hand'kerchiefs; Swiss and Lace Curtains.
A large assortment of all kinds of Bonnet Ribbon, Irish Linens, Cotton Shirting and Sheetings of all styles. Ladies' white and colored Cotton Hose; Kid, Silk and Lisle Thread Gloves. With a general assortment of Fancy Goods too numerous to mention, which we offer to sell at twenty-five per cent. cheaper than any other house in this city, as we are direct importers of our goods.
A call is only necessary—you can judge for yourself.
☞ Ladies are particularly invited to call.
Store, 91 J street, near Fourth, Sacramento.
P. S.—We keep constantly on hand a full supply of Silk and Straw Bonnets, and all kinds of Millinery Goods. v3-25

TOBACCO.
Virginia Manufactured Tobacco Agency.
GREENE, HEATH & ALLEN have removed from Camp or Pine street to the cor. of Washington and Battery streets where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call
Amongst the brands offered are the following:
200 boxes Crenshaw's Four Aces;
75 half boxes do Medal;
50 packages do Sovereign of the Seas
60 do do Bride of the Pacific;
100 boxes Halsey's Four A's;
100 do Saunders' Harry of the West;
50 do James Boyd's Gold Leaf;
50 do do Anna Bishop;
25 do A. Thomas' Club House;
50 do Ferguson's Star of the West;
50 do Mayo & Crenshaw's Bluff City;
20 do Royster's Mary's Own;
40 do do Invincible;
100 do Thornton's Cameo;
50 do Dunnaway's Wave Line;
50 do Crosby & Wootten' Metropolitan.
In addition to the above, we have 2,000 packages of ordinary brands; and as we sell exclusively on Commission for Manufacturers of Virginia, we can furnish the trade with any quality or quality required, at the lowest rate v3-16

IMMENSE SACRIFICE!

Modern Dictionary.

Author—A dealer in words, who gets paid in his own coin.

Bargain—A ludicrous transaction, in which each party thinks he has cheated the other.

Belle—A beautiful but useless insect without wiugs, whose colors fade on being removed from the sunshine.

Critic—A large dog, that goes unchained, and barks at everything he does not comprehend.

Distant Relation—People who imagine they have a claim to rob you if you are rich, and to insult you if you are poor.

Doctor—A man who kills you to-day to save you from dying to-morrow.

Editor—A poor fellow, who every day is emptying his brain, in order that he may fill his stomach.

Fear—The shadow of hope.

Friend—A person who will not assist you because he knows your love will excuse him.

Grave—An ugly hole in the ground, which lovers and poets wish they were in, but take uncommon pains to keep out of.

Heart—A rare article sometimes found in human beings. It is soon, however, destroyed by commerce with the world, or else becomes fatal to its possessor.

Honor—Shooting a friend whom you love through the head, in order to gain the praise of a few others whom you despise.

Housewifery—An ancient art, said to have been fashionable among girls and wives; now entirely out of use, or practiced only by the lower orders.

Lawyer—A learned gentleman, who rescues your estate from your enemy and keeps it himself.

Modesty—A beautiful flower that flourishes only in secret places.

My Dear—An expression said to be used by man and wife at the commencement of a quarrel.

Policeman—A man employed by the corporation to sleep in engine houses at three dollars per night.

Political Honesty — Previous lexicographers have not noticed this word, treating it, we presume, altogether as fabulous—for definition see *self-interest*.

Public Abuse—The mud with which every traveler is spattered on his road to distinction.

Rural Felicity—Potatoes, turnips and cabbages.

Sensibility—A quality by which its possessor in attempting to promote the happiness of other people loses his own.

State's Evidence—A wretch who is pardoned for being baser than his comrades.

Tongue—A little horse which is continually running away.

Wealth—The most respectable quality of man.

EVERYWHERE endeavor to be useful, and everywhere you are at home.

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,

Would respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city; by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Protean, under Goudyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any presence of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The pistou is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on lightly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The [illegible] pens should be carried in the pocket with the cap [illegible] pen pens with them downwards.

Use [illegible] five from colmen; Headley & Field's American, Bryan & Wilcox's, and Arnold's Fluid Ink, recommended by the public, as they will copy. v4-5

NEW BOOKS.

NEW BOOKS.

ANNA CLAYTON; or THE MOTHER'S TRIAL. 12mo., cloth. Price $1. (Two editions in one week.)

A well-conceived and finely written tale, of high moral excellence.—[Boston Courier.

Bookseller's and Stationer's
WHOLESALE AND RETAIL WAREHOUSE.

WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of clippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

BLANK BOOKS.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russia, Sheep and Muslin Binding. Copying Books, Indexed and Plain Memorandums, Bank and Pass Books, Diaries, &c., &c.

PAPER.—Buff, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.

STATIONERY.—A complete assortment of Law, Counting House and Fancy Stationery.

BOUND BOOKS.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

BLANKS.—Law, Shipping and Custom House Blanks.

MISCELLANEOUS.—Gold Pens, Razors and Razor Strops, Pocket Cutlery, Toilet Brushes; Cash, Deed, Date, Post Office and Envelope Boxes; Portable Desks, Gents' Dressing Cases, Ladies's Toilet and Work Cases and Reticules, Port Monaies, Perfumery, Opera Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Pictorials, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.

50,000 GRAIN BAGS for sale very cheap for CASH, at North's Sewing Factory, 145 Sansome street, between Washington and Jackson sts, San Francisco. v42.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittant fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEIER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

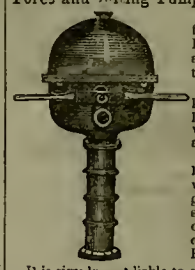
WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

[illegible] brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.



All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be converted as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated. N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-3 3m.

Letter from the Northern Country.

A fine Place—Description of Mr. Tower's Ranch—Travelers' Accommodations—Results of Energy—Peach Trees—Other Fruit Trees—Irrigation—Melons—Oasis of the Mountains—Other fine Gardens—Description of Mr. Downer's Garden and Fruit Trees—Mr. Harrill's Garden—Grasshoppers—Business and Advantages of Shasta.

SHASTA, August 28th, 1855.

EDITORS FARMER: Having had the pleasure of visiting the finest place in the Northern Country, the property of Mr. Jason Tower, twelve miles north of this at the forks of the Weaverville and Yreka roads, I feel it but justice to this section, to send you a short description of this oasis of the mountains, where the advantages for improvements are not so great as those in the valleys further south or near your noble Mart.

Mr. Tower's land is located in a valley and on the hill side, upon the banks of Clear Creek, and is surrounded (almost in a circle) by high mountains, whose range is broken by narrow gorges, through which pass Clear Creek, and two smaller streams that, coming from the northwest and west, at this season quietly empty their waters into Clear Creek, but in winter become roaring mountain torrents, swelling in a very short time to an angry violent flood. There are some thirty acres, which were a thick *chaparral* three years ago, where brush, briar and tangled manzanita were torn out by the roots by mules, to give place to cultivated fields, and a beautiful garden filled with flowers, fruit, and vegetables. All the ground is very prettily inclosed, and the Tower House being situated at the junction of the two important roads of the north, there is an immense amount of daily travel of men, women, and children, and very large pack trains, loaded with all kinds of merchandise, constantly passing to and from this town; consequently, the traveler's comfort demanded good accommodations, which are furnished by a fine two-story house, a large barn, out-houses and extensive corrals, the *ensemble* making a very pretty appearance, surrounded as they are, throughout the year, by very thick and luxuriant foliage, intersected by small running brooks, which in front of the house throw up two cooling fountains, that fall into large basins containing beautiful mountain trout. There is a broad piazza on three sides of the house, above and below, the interior is arranged with a care to comfort and convenience, whilst the attention and good taste bestowed upon its management, make the Tower House a most delightful mountain retreat and a watering place unsurpassed in any part of "our country," east or west.

Being so distant from the Bay, Mr. Tower labored under very many disadvantages in making improvements at the time of purchasing this location: however, untiring energy overcame every obstacle and he now has a garden that will, for its size, compare with any in the State. His fruit trees are certainly very remarkable. In the spring of '53 he received from Boston ten peach trees that were about four feet in hight—they were planted the last of March, and so badly had they been cared for, it was only by the greatest attention they were gotten through that summer; however, they lived and put forth a few sickly leaves. During the last year they grew very finely. This year their increase is extraordinary and they have borne very large, beautiful, and delicious fruit; one tree yielded four and a half bushels, measuring from 8 to 11 1-8 inches in circumference. These trees stand eighteen feet in hight, by about fifteen in width—one measuring 19 inches around the base, a second 15 inches, and the rest somewhat less. There are many trees of two years' growth from the pit, four and six feet in hight, bearing quite a goodly number of peaches. Upon the place there are 2,000 Peach trees, 100 Pear, 150 Apple, a few Nectarines, many Cherry, a few Fig, and a large number of shado trees, tho last seedlings. There are, also, 1,000 Grape Vines, from cuttings, brought from Los Angeles—in a very luxuriant condition. The peaches already ripened were of the finest flavor, but their peculiar name is not known—they sold very quickly in this town for $1 each. There are a few Peach trees from Oregon, but they do not thrive; they have only a few small leaves, and the fruit is poor and knotty. The Nectarines are from Oregon, are thriving finely, and have handsome fruit for the first time. The growth of the Apple trees and Pears is extraordinary—they are but two years old and measure five and six inches round the body, standing sixteen and eighteen feet high. This flourishing condition of the fruit trees, is supposed to arise from constant irrigation during the [illegible] part of the valley where fruit trees have grown very well but not to such remarkable size in so short a time, they are not watered, hence it is proved that attention in this particular is highly judicious.

Mr. Tower has raised a large quantity of Canteloup, Nutmeg, Musk and Water-melons. Some of the last are of fine size and flavor, weighing from 25 to 31 pounds. The others very fine, but are of a mixed sort, though some few are very luscious, resembling very much the celebrated Hunter Canteloup.

It is scarcely necessary to add, that, the vegetables are of the finest quantity, of every variety and in great quantities. The Grasshoppers did not visit that part of the State in any numbers, so that the place was saved from the devouring *peste*.

The thick growth of flowers and ornamental vines near the house, with the gentle drippings of the *jets d'eau*, impart a cool and invigorating feeling to the weary traveler, either from the valley or mountain; whilst the urbanity and politeness of the host and his family, make this Oasis of the Mountains the pride of Shasta county and one of the most inviting places in the State.

There are also two fine gardens in this town—one the property of Mr. A. L. Downer, the other of Mr. D. D. Harrill, lying in opposite directions the first upon the hill side above the town, the last upon the flat below it.

Mr. Downer's garden is almost entirely devoted to fruit, and has been only partially successful, in consequence of the destruction committed by the Grasshoppers—very many of the young trees have been put back, but are now setting forth leaf again: however, in some fruits and plants Mr. Downer has very great cause of pride, considering the great disadvantages he was laboring under, and, that, the improvements are the work of his own hands during leisure moments. His garden being upon the hill side, where he is dependent upon springs for water, he has cut twelve terraces upon the ascent and filled them with fruit trees and Grape vines. He has [illegible] Quinces [illegible] extremely well; [illegible] the Pear is graced. There are also Peach, Pear, Apple, Plum, Apricot, Fig, Orange and [illegible] trees—indeed, it is quite a nursery. Whatever these trees escaped tho *peste* they flourished in an extraordinary manner. One peach tree two years old, ten feet in hight, bore 115 peaches; another seven feet high, nine inches at the base, has on it at this moment, fast ripening, four peaches, the greatest in size measures nine inches in circumference. A Bleecker Plum from seed two years, stands seventeen feet high and has a few plums. The Almond trees are from seed planted last spring, are growing finely and are three feet high. The Apricots bore and ripened upon trees two years old this summer—one yielded eighty-five, which were sold in this town for three bits each. The Oranges are seedlings and very handsome. But the most remarkable of all Mr Downer's success is the English Gooseberry from seed—they are very large and luxuriant, and with the large Currant bushes and thick Raspberry vines quite put one in mind of the days when we went gipsying.

Mr. Harrill has given some attention to fruit trees. He has been successful in Peach, Apple, Pear, Almond and Fig trees, but has paid more particular attention to Melons and vegetables though in everything he has met with very great loss by the Grasshoppers. His peach trees were almost destroyed; the almonds and figs, however, are doing very well. Some of the peach trees are starting again, but their growth for the year is lost. The grasshoppers ate everything except the Tomato and Melon vines. They have nearly disappeared, and have *now* concentrated upon the sides of a small brook that runs upon one side of the garden, which contains a plat of four acres. Next season Mr. Harrill hopes to have a garden that will be unsurpassed by any other in this part of the State.

[illegible] improvements of every kind are being made, brick stores and dwellings now ornament the town; the sidewalks are filled with merchandise, the street crowded with huge wagons and mule pack trains. The richness of the surrounding gold diggings is bringing wealth to the place; its prosperous trade, its social and salubrious advantages render it one of the most thriving in the country.

IMPROMPTU.

Agricultural Statistics.

WE shall publish from time to time the Reports from Assessors of the several counties, of the varied productions. These statistics are gathered, it should be remembered, in May and June, principally at the time of making up the assessment roll, and many of the calculations of crops must of necessity be *supposed yields*. These reports are valuable, for they approximate near to the real amount in most cases. We shall however, give in addition all later items we gather up to the actual harvesting and measurement.

We give annexed, the Report of S. D. Towne, Esq., Assessor of Sonoma county, which contains items of interest, and is published in the Petaluma Journal:

PRODUCTS OF SONOMA.

The quantity of land enclosed in this and Mendocino counties amounts to [illegible] acres; about 22[illegible] of which is in the cultivation of the following products:

Wheat.—The number of acres sown is 12,233, of which amount 3,500 acres only (mostly from Chile and Oregon seed) is good, or but very slightly affected with rust, and will average 25 bushels to the acre; making a total of [illegible] bushels. The remainder, or 8,733 acres, was entirely destroyed or nearly so by the "rust," and but a small portion was ever harvested. Last year the wheat from Oregon and Australia seed was so badly smutted that it lost favor with our farmers, and the kind commonly known as the "Club Head," became the favorite and was largely sown, but most unfortunately it seems to have been the only kind affected this year.

Oats.—The number of acres put down to oats is 2,[illegible]; a portion of which, in the vicinity of the coast has been affected with rust. I must here remark that the [illegible] exceeded its ravages to [illegible] I am told by farmers of the [illegible]. From the many inquiries I [illegible] and to believe that the [illegible] will make an average crop of [illegible] which gives a total [illegible]

Barley.—This grain seems to have met few friends, and consequently very little was sown in comparison with last year. In some localities, the "cheat" has destroyed some few fields; with this exception the grain is good. Number of acres sown, 1,561; average yield, 32 bushels to the acre; total, 49,952 bushels.

Corn.—Of this product there 714 acres planted, tho most of which is in the Russian River and Dry Creek valleys, where it seems to flourish more luxuriantly than in any other portion of the county. From present indications there will undoubtedly be an abundant harvest—say 40 bushels to the acre, making 28,560 bushels.

Rye,—Only eight acres sown, merely as an experiment.

Buckwheat.—Amount planted, 99 acres; seems well adapted to our soil and climate. As yet there has been none harvested; I cannot therefore, tell how it will yield.

Peas.—Number of acres, 156; average yield, 30 bushels per acre; total, 4,680 bushels.

Beans.—177 acres.

Potatoes—The quantity planted is 1,693 acres, against 2,600 last year, and will not probably yield more than 40 sacks to the acre, owing perhaps, to the extreme hot dry weather in June, which gives us a total of 67,720 sacks, of 120 pounds each. I think this the outside figure. There is, however, no indication of worms or insects disturbing them, and what are raised will most likely be perfectly sound and good.

Pumpkins, Turnips, Beets, Onions, &c., and almost every kind of garden vegetables, are raised in abundance and to spare.

Fruit Trees.—There are 6,730 set out, mostly young, from one to three years old, comprising many varieties of apple, pear, peach, plum, cherry, quince, fig, apricot, &c. About one-third of the number have commenced bearing, and in another year we may anticipate an abundance of fruit; and the present year, I think our county will compare as favorably, both as regards quantity and quality, as any other county in the State.

Vineyards.—In addition to the orchards, there are many fine vineyards numbering in the aggregate [illegible] ered last year was 80 tons; the present season it will be fully doubled.

CATTLE, HOGS, &c.

American Cattle.—Number of milch cows, 5,350; dry cows, 2,575; calves, 5,750; work oxen, 2,771; beef cattle, 1,922; yearlings, 4,294; total number of American cattle 22,662. To this number must be added the *California cattle*, 3,588; which gives a total number of cattle (American and Californian) 26,250.

Horses.—Number of gentle horses, American and Spanish, 3,708; wild California horses (mesada) 1,250; total number of horses, 4,958.

Of *Mules* there are 213; of *Hogs*, 19,450; of *Sheep*, 7,065.

STATISTICS OF TULARE COUNTY.

WE are indebted to the Surveyor General, S. H. Marlette, Esq., (says the State Journal) for the following abstract from the report of the County Assessor of Tulare county. The report says: "There are in the county 1,600 square miles of as good an average quality of land for agricultural purposes as can be found in the State." Amount of land cultivated, - - 2,750 acres

do	do	In wheat, - -	1,[illegible] do
do	do	in barley, - -	1,[illegible] do
do	do	in corn, - -	2,[illegible] do
do	do	in oats, - -	[illegible] do
do	do	in potatoes and other vegetables, -	20 do

Number of horses, 487; American cows, [illegible]; other cattle 2,778; goats, 1,[illegible]; sheep, [illegible]; swine, 1,[illegible]. Amount of taxable property, $1,[illegible].

The report, which is dated at Visalia (the county seat) August 11, states that there are now about two hundred and fifty [illegible] and in the vicinity of Kern River. A large portion [illegible] the quartz [illegible], and it is the opinion of those best acquainted that the quartz leads in that county exhibit a number and richness of those to be found in the same extent of territory in any portion of the State. He says, "I have examined [illegible] and they are the richest [illegible] of the placer deposits ever [illegible] pay well.

In relation to [illegible] as a portion of the southern boundary of [illegible] [illegible] from the fact that [illegible] are [illegible]

the disputed territory, and some difficulty is likely to ensue in the collection of taxes. The Assessor suggests that the summit of the Coast Range is the natural boundary between the two counties, and urges the importance of the speedy determination of some definite line.

Grain Prospects Abroad.

The yield of Wheat this year, it is now pretty well established, will be a very large one. The harvest is over in more than half the grain growing districts. It promises to be equally good in the northern and extreme northwestern districts, where it is now actively going on. The heavy turn-out of Wheat and Rye, accompanied as it is by a superabundant Potato crop, and with every reasonable prospect of an enormous yield of Indian Corn, at once suggests the question of prices. Since referring to this point, a week or two ago, we have had several additional mails from Europe, which represent the English crop weather as much improved, and the Wheat crop itself well advanced for the season. The consequence has been a regular decline or softening of the Liverpool market for Breadstuffs. The first American staple to feel the influence of the fine prospects for the new crop in England is Indian Corn, which from fifty-four shillings the imperial quarter has fallen to forty shillings. But this last is still a high figure, relatively considered. When Corn was introduced into England and Ireland, under Sir Robert Peel's policy, six years ago, thirty or thirty-two shillings the quarter of eight bushels was deemed a very fair inducement to shipments from the sea-board markets. It was equal to one dollar the bushel of sixty pounds weight in Liverpool, and half this money was esteemed more than the average value of the article at Philadelphia, New York or New Orleans. Flour has fallen, though not so rapidly, from the same cause, to about forty shillings the barrel; a point that would have been deemed extravagantly dear twenty months ago,—or before the foreign demand for Breadstuffs in 1853 was fairly established. Then the opinion was thought sanguine which would venture to predict that the article would reach thirty shillings in Liverpool.

It would not be safe at this time to predict any particular course of prices on the other side, but we mention the foregoing incidents in the trade, only a few years ago, in proof that a considerable further decline may take place without either destroying our foreign reliance for a market the coming season, or rendering it unremunerative to the farmer and miller, or to the speculative exporter who is to relieve them of their surplus stocks. Lower prices, compared with the present, is one thing; but ruinously low they may not be, even under an additional decline of eight or ten shillings sterling in Flour, and the same in Indian Corn.

The crop weather in France is said, by certain American travelers who have written home on the subject, to look bright and promising. Such was not the case earlier in the season, and French buyers—on [illegible]

A heavy yield in France as well as England, would have an important bearing upon the export demand for Grain in our own markets; but even in the best seasons, one or both countries have been compelled to draw heavily upon the Baltic and Black Sea markets. These supplies are now, in a great measure, cut off—and if the war continues in the East, it is reasonable to assume that the deficit will be made up from the United States.—*N. Y. Times, Aug. 6.*

The Tournament.

We received a few days since an inquiry relative to the coming Festival. In answer to our correspondent we state that some detail will be furnished in the next number of our journal, and we now annex some additional prizes. We are happy to announce that there is a constant and increasing interest in every department. A large Show and one that will do honor to the State may be expected.

Reader, will you be there?

SPECIAL PREMIUMS.

A Grand Festival Tournament.

The funds for these premiums are from private sources. No competitor will be allowed to enter the list without a card from a committee competent, to secure ladies from improper association.

LADIES IN SADDLE.

To the most accomplished Lady Rider, a Gold Watch and Chain.....$100
Second best, a Saddle 50
Third do a Silver Cup 25
Fourth do a Riding Whip 10

GENTLEMEN IN SADDLE.

The most skillful Gentleman Rider, Silver Plate..... $50
Second best do do do 25

SKILL WITH THE LASSO.

The most accomplished feats of Horsemanship with the Lasso, a Silver Cup $50
Second best, a Cup..... 25

INDIAN SPORTS.

The most expert and skillful sports of the Indian, with bow and arrow—First Prize.....$20
Second Prize..... 10

SUPPLEMENTAL.

Premiums will be awarded to Trotting and Pacing Horses produced on Exhibition days; also, to Roadsters, spans and single, and Horses under the saddle, as follows:

Best Trotting Horse$50
2d do do 30
3d do do 20
Best Pacing Horse 50
2d do do 30
3d do do 20
Best span of Roadsters, in harness, Silver Cup, value 30
2d do do Silver Cup or Plate, value 20
Best single Horse in harness, do do do 20
2d do do do do do do do 15
Best saddle Horse exhibited, plate..... 20

The river in front of this city is said to be lower than at any previous time since the fall of 1848.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, SEPTEMBER 7, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

The California Farmer in Boston, Mass.—Copies of the *California Farmer* may always be found at Redding & Co.'s, State street, Boston.

A Worn for the California Farmer.—Who among our many readers will bear us in so kindly a remembrance as to induce *one, two, three* or *five* of their neighbors to become, like them, subscribers. We wish to enlarge our list, so as to make our paper better. What subscriber will speak to us first?

Who Volunteers?

That the State Exhibition should embrace every interest, and enroll as many of our citizens as possible in its favor, it is important that citizens in various sections should volunteer to call attention to the subject over the whole coast. Every county should have volunteers. Oregon and Washington territories should join us and bring hither specimens of their products and skill. Who will act for Oregon? who speaks for Washington Territory? and who in the lower counties down the coast? Let no section be unrepresented. There must be public spirited men everywhere, and we trust many will nobly come forward in so good a cause.

Look to the subjects in this week's issue. See the interest felt for the New York State Fair at Elmira. Let the same interest be felt at the city of Sacramento—let the Harvest Dinner and Ball be a joyous season; let citizens from every section of our State come up to this festival, as the pilgrims go up to Jerusalem, and, banishing for a time, politics, love of money, and minor matters, engage in this rational enjoyment; and let producers, manufacturers, mechanics and artists all come up, so that the splendid capitol building may be filled.

There is nothing so important to science as competition. Every artist considers his own work the very *ne plus ultra* of the age, and glories in his own great achievements and seldom dreams of being eclipsed. But a new light appears, a new dawn hastens to reveal a still greater advance than has been yet attained; and thus by the disappointment of one, thousands rejoice. Let advance with a generous rivalry. We look to the volunteers to aid.

To Exhibitors at the State Fair.—In reply to the inquiries of a correspondent, as to when contributions should be sent, and for the information of those who may not yet be "posted," we re-publish Article 4, of the Rules and Regulations of the coming Fair:

"All Exhibitors who intend to compete for the Premiums of the Society, must become members of the same, and have their articles on the ground and entered at the Secretary's office, at or before 5 o'clock, on Monday evening, September 24th, without fail, so that they may be arranged in their respective departments, and in readiness for examination by the Judges on Tuesday, at 10, A. M."

Excuse Errors.—We must ask our kind patrons to excuse the errors that must of necessity occur in articles that appear during our absence. We are called away a great portion of our time now, in preparations for the Fair, and we are not able to give that close attention to proof we desire, and errors in names, places and terms will occur. We have been absent over the State for nearly two weeks, and shall be more or less till after the Fair, and hope our readers will make all due allowance for irregularities till after the Exhibition is over.

Special.—We call attention to the Letter of our Boston correspondent; matters of interest will be found on many subjects. Hereafter we shall have full reports in every department.

We must ask indulgence of our Eastern friends; many of their advertisements we could not insert this number. And a mass of accumulated matter, even deferred from last number, must be deferred again—from Yuba, Napa, Sonoma, Suscol, &c. Some our kind lady correspondents must excuse till next week, when we promise a most interesting number.

Thanks—To Pacific Express Company, for prompt delivery of letters and packages during the week. We are also under obligations to Wells, Fargo & Co.'s Express, for attentions to us.

Railroad at the State Fair,—Visitors at the Fair will have the pleasure of a ride in the Railroad Cars.

The Agricultural Dinner and Ball.

It has been proposed that during the Festival Week of the Fair, a Grand Agricultural Dinner, and a Harvest Ball should be added to the other sources of enjoyment; and should the public evince a proper interest in the State Agricultural Fair and Cattle Show, and the Tournament, and there be sufficient demonstrations made, these additional pleasures will be offered.

The plan of the Dinner, however, will be of a social and intellectual character. No gentleman, other than invited guests, will be permitted to come to the tables unless accompanied by a lady. In addition to the "good things of earth," speeches, song, sentiment and wit will give a zest to appetite, so as to make it a "feast of reason and a flow of soul."

The Dinner would occupy one evening, and the Ball another. At the latter, such arrangements will be made (should it take place) as will make it truly a "Harvest Home Ball," where an offering should be made to the Seasons—where Beauty and Grace should be welcomed to the Temple of Flora and Pomona, and happy hearts revel in music of the harp.

We pray the God of the Seasons may be propitious, and parents and children look forward to a season of pure and innocent recreation and enjoyment.

The Peach Orchard at Suscol.

Some two weeks since we had the good fortune while pursuing our duties of investigations among the beautiful spots which glad the face of our fair earth, to be joined by a group of friends most congenial and most appropriate for such a duty as we were engaged in, that of *looking at* and *tasting* the various specimens that our bounteous soil and climate yields.

While at Benicia and preparing for a visit to the celebrated ranch of the Messrs. Thompson and Bro., the thought occurred that it would be much better to have witnesses of some of these wonderful products, as people are very apt to say that we in California tell terrible stories about the wonders of California. Be that as it may, resolving this time to be sure, we had the honor to unite with a happy party. Some in saddle and some in carriages, a ride of sixteen miles brought us to Suscol, and reader we will not tell you how how much fruit we saw—how magnificent, or how far beyond the anticipations of all the party was this splendid garden. It is our purpose now [illegible] unrivaled for excellence and beauty; and to the Messrs. Thompson and Bro., and the sons, and to Mr. Putnam and lady, our party were indebted for an unexpected and wholly unanticipated amount of pleasure. We can only say that after the repasts, all united in a hearty assent to the following resolutions, passed by acclamation. Our duties relative to the orchard, we shall communicate in another article:

Resolved, That the entertainment presented to us this day, at the fine ranch of the Messrs. Thompson of Suscol, and the interesting visit through his splendid orchard and gardens, the luscious fruits gathered from the overloaded branches, the bounteous and luxurious dinner provided at a very brief notice, are all evidences that the Messrs. Thompson are alike skilled for courteous hospitality and horticultural science; and the undersigned feel it but an act of justice and courtesy to commend in the highest terms to their friends a visit to this beautiful spot, confident that it is the finest *fruit orchard in California.*

Mrs. Gov. Biglen and Daughter.
Mrs. Judge Hastings, Benicia.
Miss Ada Bynne, San Francisco.
Miss Ada Hall, Sacramento.
Capt. Jones and lady, U. S. A., Benicia.
Lieut. Morris, " "
Doct. Tripler, Surgeon, " "
J. H. Eaton, Esq., " "
Mr. Miller, of Vallejo.
The Editor of the Farmer.

Corrected.—In the pedigree of the famous Morgan stock of Horses, a line in the last paragraph was transposed, and we now publish as corrected:

The progeny of Black Hawk in three States, Massachusetts, Vermont and New Hampshire, is as follows: One hundred that can beat 3 minutes; twenty-two that can beat 2.40; ten that are inside 2.35; two inside 2.30, and *one* that can beat *any horse in the world* for $10,000, which is a *public challenge.*

Some Honest Men Yet.—The Board of Examiners on the floating dobt of San Francisco, have made their report, rejecting 43 claims representing the enormous sum of $1,737,565 88; while they had confirmed 338 claims, representing only the sum of $322,281 01. There is some hope for San Francisco yet.

Weekly Accounts of Fruits Exhibited AT THE SOCIETY'S ROOMS.

Four baskets of Apples, from A. H. Myers, Esq., Pioneer Nursery, at Alameda.

These baskets contain 17 varieties, viz: No. 1, name lost; circumference of transverse diameter, 9 1-4 inches. No. 2, "Maiden's Blush,"(?) circumference of transverse diameter, 8 7-8 inches. No. 3, name lost; circumference of transverse diameter, 9 inches. No. 4, "Jersey Sweeting," circumference of transverse diameter, 8 1-4 inches. No. 5, "Yellow Bough,"(?) circumference of transverse diameter, 8 1-8 inches. No. 6, "Spitzbergen;" circumference of transverse diameter, 7 1-2 inches; circumference of longitudinal diameter 8 inches. No. 7, "Sweet June;" circumference of transverse diameter, 7 3-4 inches. No. 8, "Peach Pound Sweet;"(?) circumference of transverse diameter, 8 3-4 inches. No. 9, "Summer Queen;" circumference of transverse diameter, 8 1-4 inches. No. 10, two fine specimens, name lost. No. 11, "Sweet Pearmain;"(?) circumference of transverse diameter, 8 1-8 inches. No. 12, name lost; circumference of transverse diameter, 9 1-2 inches. No. 13, "Baldwin;"(?) grown on Maiden graft, No. 14, "White Juneating." No. 15, "Early Strawberry. No. 16, name lost. No. 17, name lost. No. 18, "Summer Golden Pippin"(?).

To make this report, was one of the most agreeable duties which has come under the province of your committee. These baskets contain the best and most extensive variety of Apples, which we have seen exhibited in Sacramento, and fully settles the problem that good Apples can be produced in our valleys. Eight of the largest weighed two pounds eight ounces. Your committee find that the grower has in some way, permitted his labels to become transposed, and hence the fruit is incorrectly named.

From Dr. J. S. Curtis, Sacramento river, Samples of Sweet Potatoes, of most excellent quality. Samples of Peanuts, very large. Fine specimens of Early White Corn, and heads of the famous "Bold Barley."

The Executive Committee paid a short visit to the Ranch of the Doctor, and were most kindly received and entertained. The committee were pleased with the many improvements made upon his rich and valuable grounds; a full report will appear at the proper time. Dr. Curtis is doing much to advance the general interest in Agriculture and has an admirable spot for great results. His Sweet Potato and Peanut plantations were sources of great interest to the committee.

From J. H. Wolfskill, Esq., "Rancho de la Puto," three native Peaches, White Freestones, of very excellent quality, resembling the White Heath. We recommend their cultivation.

A. P. Smith, Esq., exhibited three baskets of superb Peaches, measuring from 8 to 10 1-2 inches in circumference, and all of delicious quality, as the "tasting committee" can vouch. Mr. Smith has been particularly successful in exhibiting superb specimens at the rooms always.

A basket of Peaches, also from the Pomological Gardens of A. P. Smith, Esq., comprising six "Crawford's Late," viz: The largest measuring in circumference by its long diameter 9 3-4 inches, and in circumference by the transverse diameter, 9 1-2 inches. This fruit is almost unexampled at this season, and adds another example of the success of Pomological Science in this valley, Weight of the six, three pounds.

Four Seedling Free Stone Peaches, the largest measuring in circumference by its long diameter 8 3-4 inches, by its transverse diameter 8 1-2 inches. Weight of the four, one pound five ounces. These peaches are remarkable for uniformity of size and richness of flavor.

We hope all fruit growers will become interested in showing samples of their fruits and making themselves acquainted with each other and the fruits grown by each.

For Fruit Committee. B. B. Brown.

Editors Farmer: In your last issue, we noticed a stricture on the measurement of fruits, as reported by the Committee on that department. The Committee did not intend to give the *diameter* of any fruit, which they reported, but, merely *designated* where the *circumference* was taken, and we venture to aver, that no one thought so, except some *oblique* and *distorted mental institution.* The reports were hastily made, and intended to be connected for the action of the Society, to enable the proper Committee to award the appropriatr premiums. What the Committee intended to do, was, to give the *circumference* of the *longitudinal parallel*, or *longest diameter*, and also, of the *transverse*, or *short diameter*, of every contribution of fruit, which might be displayed at the rooms of the Society, and worthy of such distinction. This mode of *designation*

and *measurement*, we pronounce *correct*, and significant of what is intended to be conveyed.

Com.

Our Boston Correspondence.

Boston, July 21, 1855.

Since my last to you we have had some delightful cool weather and refreshing rains, and the change from the suffocating heat has been hailed with joy and gladness. The thermometer in State street, the last hot day, registered 101° in the shade.

The usual weekly exhibitions of the Massachusetts Horticultural Society have been well attended, and the shows of fruit and flowers have been fine. This day being the premium day for picotees and carnations, the display was the best of the season—the flowers were rare and fragrant after the refreshing rains. New seedlings of the delphinium tribe were exhibited. The first premium of $5, for the best display of picotees, &c., was awarded to Evers & Bock, of Nonantum Vale; the second of $4 to Hovey & Co.; the third of $3 to W. J. Underwood. The display of fruits was excellent—peaches, large and rare, making the mouth water; grapes of every variety. Mammoth currants and raspberries were exhibited in profusion, making a most tempting appearance.

The crops in every part of the country promise a most abundant harvest. In Baltimore large cargoes of new wheat are daily arriving, and prices are sensibly declining. Vegetables also are abundant, and present a favorable change for the consumer.

The surplus wheat of Canada is estimated, over home wants, at 12,000,000 to 15,000,000 bushels.

In New York State a substantial decline took place in flour and grain, at the Corn Exchange. The glowing accounts from the growing crops now being harvested, together with the absence of any export demand, either for flour or wheat, has disheartened the "bulls," who are manifesting a desire to get out of stock as soon as possible, even at a decline. Sales have been made as low as $8. New Southern wheat is coming in freely, and new wheat from the West may be expected in considerable quantities. Correspondents from Michigan, Illinois and Ohio, state that the yield will be the largest ever known. The harvest in the Genesee has just been commenced, and the crops in that section will be immense.

The Trustees of the Massachusetts Society for Promoting Agriculture, have offered a premium of $600 to the possessor of the mowing machine which shall cut during the present season, with greater economy, and to the best advantage, not less than fifty acres of grass within the State: the machine to be worked by horse or ox power. All other things being equal, the greatest number of acres cut by any one machine would entitle the competitor to the premium. Every competitor must give notice of his intention to compete for the premium, and at the end of the season, or before the 10th day of September next, furnish satisfactory proof of the number of acres cut by the machine during the season. The Trustees offer still another premium of $1,000, to be awarded in 1856 to the maker and exhibitor of the best mowing machine. I give you the above in full, that your readers may have an idea of the value of the machine, and also to extend the notice far and wide.

Another meeting of merchants and business men has been held at the Merchant's Exchange Reading Room, in reference to the proposed line of steamships between Boston and Liverpool. His honor Mayor Smith warmly favored the enterprise, and made remarks which were received with repeated applause, and said if we passed a resolution that "we will have a line of steamers to Liverpool, it would soon be actually running." Speeches were also made by E. Hasket Derby, Esq., and Col. Enoch Train. The exchange was filled, and considerable enthusiasm prevailed. Models of the proposed pioneer steamship, to be called the "Cradle of Liberty," and to cross the Atlantic in eight days, were on exhibition, with statistics to show the feasibility of the plan. I shall speak more in future of this renowned project, which is due to the enterprise of the merchants of Boston.

Cambridge is to have the first street railroad into Boston. The road has been located on all the entire route, all the stock taken, and the contract made. It is expected that the road will be in operation by November, and the work is to be commenced at once. This will lead to other roads from different parts of Boston, and we shall soon be enabled to travel to all the adjacent towns by this most comfortable of all conveyances, by horse power.

Regattas, boat races, &c., are the order of the day, and all our boat clubs are making liberal prizes for the winners in trials of speed. The first grand regetta of the season, at Nahant, is to come off on the 24th inst., and the prizes are quite valuable. The first being a silver pitcher, value $100; second, a silver cup, value $50; third, a spy-glass, value, $25. The novelty and excitement of the occasion will attract crowds of visitors from far and near.

The entire property of the Vermont Central Railroad Company, which has cost about $9,000,000, is now selling in the market at less than $1,000,000.

John Mitchell having abandoned the editorial profession on account of his health, is now residing on his farm in Knox county, Tennessee, having adopted the more genial one of an agriculturist.

Littell, Son & Company are soon to issue the first number of a monthly publication tu be called "The Panorama of Life and Literature." Each number of the work will contain articles of leading interest, grave and earnest, popular, yet of value. To these will be added in abundance and variety, tales, poetry, voyages, travels, &c. The enterprising publishers promise a magazine that shall be better than mere amusement; a book that shall provide for the imagination as well as for the reason and memory. The work will doubtless be very popular, and success attend them. It will be furnished at three dollars a year.

Ticknor & Fields announce a new Poem, by Longfellow. It is understood to be a lengthy production, and the subject is an American one. Among the list of new works in press, a more *literary treat* could not be chronicled, and it will *be a pleasant bit of news to all.*

All must have heard of the illness of the Hon. Abbott Lawrence. I am gratified to state that the symptoms of his complaint have become somewhat more favorable. The most celebrated physicians are in constant attendance upon him, as the nature of the disease is such as to require frequent medical attention, both day and night. May his life be spared to his afflicted family, as his death would leave a void which could never be filled.

In my next I shall give continued notes of the crops, &c., local news, literary intelligence, and other matters too late for this.

De Quincey.

To our Napa Subscribers.—We return many thanks to our patrons in Napa, for the prompt and handsome manner in which they responded to our visit; their promptness speaks to their honor. Such of our subscribers as we had not the pleasure to meet will find their bills at the store of Messrs. James & Co., Napa City, who are our authorized agents, and who will receive subscriptions. Mr. Gilmore, at Napa Hotel, agent of Pacific Express, will also act for us, and we hope to have the name of every farmer in that beautiful county. We feel gratified in the knowledge that the California Farmer has a much larger circulation in that valley than any other paper in the State. Our sincere thanks for this, kind friends; and those who wish their business well known through all the counties of the State, we suggest our columns for their advertisements.

Loss in Grain.—While on our route through Yuba county, we learned from the proprietors of the Queen City Mills, at Marysville, that the quantity of foul seed, mustard, cheat, chess, and mixtures of oats and barley, is very great this year; that in their process of winnowing, in order to give their customers pure flour, they subtracted 3,200 pounds of foul matter in four days—and this weight was total loss—making the amount about $25 per day, or 25 cents per barrel. This speaks well for their desire to make good flour. Do all millers act thus wisely?

The Pattern Broom.—Messrs. Lusk & Co., of this city, have presented to the State Society's Rooms a Broom made from the material grown in Sacramento, and manufactured in the city, and which for size of the brush, the quality and size of the broom, we do not think can be excelled, if it can be equalled, in the United States. We would invite all who desire to see *a Broom what is a Broom*, to visit the Society's Rooms on Fourth street, and those who are purchasers to note the advertisement of Messrs. Lusk & Co.

The Election on Wednesday seems to have passed off comparatively quiet. Returns have been received from various portions of the State, sufficient it is thought, to insure the election of Col. Johnson, the candidate of the American party for Governor, by a large majority; and all the candidates of the American party for State officers are doubtless elected by decided majorities. The returns will not be all received for some time to come yet.

Entrees for Premiums.

Sonoma, August 10, 1855.

To President of California State Ag. Society:

The undersigned would submit his Fruit Orchard to the inspection of the State Society's Committee, and offer it for the Premiums of the present year. Julius K. Rose.

San Jose Mission, August, 1855.

To Cor. Sec. State Ag. Society:

Dear Sir—I desire to offer my Farm, Nursery, and Orchard, also my Hedge, for the Premiums of the State Society of the coming year, and should be happy to see the Committee at any time. Respectfully, Jesse Beard.

The above notices should have appeared some weeks since, but did not reach us for publication.

Horticulturists' Meeting at San Jose. The Fourth Annual Meeting of the Gardeners and friends of Horticulture at San Jose, was held on Thursday, August 30. Not having received any regular report of the meeting, we extract the following from the letter of a correspondent: "The number present at the banquet was about sixty. A committee was appointed to draft rules for the formation of a Horticultural Society, and that committee is to meet and report next Thursday (yesterday) evening, at the City Hall. We had a little Exhibition before dinner, of fruits, etc., which were superior in size to those I see described in your last paper."

A Splendid Brick Block.—Nearly opposite corners to the Western Hotel, Marysville, stands the U. S. Block, a massive three-story building, with solid foundations, iron window caps and coverings, and finished roof. The front of the building is of superior *finished brick*, equal to any that can be produced in the United States. The mason work of this block was done by Messrs. S. Payne & Co., who are the manufacturers of these fine finished brick. We feel pleased to call attention to the fact, because we need not any longer send to Philadelphia—we have them of home manufacture, and we have the assurance from the manufacturers that specimens of their skill will be at the Fair at our capitol.

Emery Brothers, Albany.—Business established in 1846, by H. L. Emery, and since continued by him and his Brothers, Wm. B., H. D., G. W., and A. T. Emery; five brothers in all, and all practical and experienced makers, and acquainted with their use of every implement of agriculture, from the hand hoe to the most com- horse power.

Capital now invested in real estate, upwards of 30,000 dollars. Capital invested in stock, machinery and personal property, 25,000 dollars; besides the patent rights of all their patented machinery and implements, all of which patents are the sole property of the present firm.

Number of horse powers sold annually, of the improved endless chain variety, and introduced together, about ten to twelve hundred sets; depending upon good or poor crops. They go to every State and Territory of the Union, and almost every grain growing country in the world.

Value of implements of all kinds, sold annually in Albany, N. Y., in consequence of the untiring exertions commenced by them and continued together, with the universal success which has always attended the introduction of everything they have introduced, amounts in aggregate to nearly half a million of dollars.

The Messrs. Emery are all young men, the eldest not over thirty-three years of age.

The Cultivation of Truffles.—It has been suggested to the Patent Office, that measures should be taken to introduce the truffle into the United States. This esculent, which in some respects resembles the mushroom, has been the favorite dish of epicures from time immemorial to the present day, and yet, strange to say, they have always been scarce and high priced, few knowing how to raise them, and fewer still possessing the proper knowledge of preparing them for the table. The royal cooks of France say that "the truffle improves all it touches;" and happy the *cuisinier* who can give a taste of its delicacy and flavor to each separate dish.

A gay French writer says: "When I eat truffles I at once think myself transported to another world; for instantly my spirit becomes more gay and more joyous; my blood courses my veins with an indescribable pleasure; an agreeable voluptuousness seizes upon me, and my whole spirit is changed by the delicious symposium. As I continue eating, my judgment becomes sound and discreet, my wit sharp and ready and my imaginings of the most lofty and varied kind. I feel a sort of inspiration comes over me and I feel as if I could really write an epic poem, address a popular assembly with unexpected eloquence, and compose works which for depth of learning and beauty, and brilliancy of style, should astonish the world. Then the appearance of the [illegible] which follows—the delicious soup—and the potatoe dressed!—ah, language is too poor to portray these; and all—yea, all—are surpassed by truffles."

Our Boston Book Department.

[The following notices appear in several agricultural works East, and we desire our friends and our correspondents, as well as our advertisers in the Eastern States, to observe them, if they wish their business promptly attended to:

The California Farmer is a valuable paper for advertising in California, particularly for those engaged in Agriculture and Horticulture, it having a large circulation over that State and the other principal States of the Union. The agent may be found at Messrs. James French & Co.'s store, No. 78 Washington street.

N. B.—All new publications designed for notice or review in the California Farmer, should be sent to the care of James French & Co., 78 Washington street, Boston.]

Whilt & Yost, Philadelphia, have just published "Julia Tremaine," or the Father's Wish and the Husband's duty—a Tale of High Life; handsomely bound in cloth; 12mo.

The scene is laid in England, and the plot involves the sufferings of everyday social life. It is very finely written, and the style purely original, as well as refined. The character of Julia the heroine, is very noble, so elevated, and so disinterested; her love for her husband (who deserts her) is supreme, and the portrayal of her sufferings would bring tears from the eyes of a stoic. The other characters are well drawn, and the book will be found absorbingly interesting. The *Ladies* will be particularly delighted with it. Send for a copy. Received through Messrs. James French & Co., Boston Agents.

We have received from A. Morris, Publisher, *Richmond, Va.*, the following *new works*, just published by them:

1st. "*Alone*," by Marion Harland, of Richmond, Va.—a handsome 12mo. volume, cloth gilt.

In this age of trashy literature, it is really refreshing to come across a book like this. It is a heart offering upon the altar of home and social affections, a simple tale of real life, dedicated to "my brother and sister." The author says in dedication, "It is meet that those whose sympathy has been dew and sunshine to the nursery plant, should watch over its transplantation into the public garden. My story is, what it purports to be, a simple tale of life—common joy and sorrow, whose merits, consist in its truthfulness to nature, and the fervent spirit, which animated its narration." The author is a graceful and attractive writer, and we can point to no female work, containing finer passages than "*Alone*."

2d. "*Ellie*," or, the Human Comedy—by John Esten Cooke, author of the Virginia Comedians, &c.; a handsome 12mo volume, beautifully illustrated with original designs by Strother.

The Richmond Dispatch says: "Those of our readers who have read the 'Virginia Comedies,' have no doubt hailed with delight, the announcement of a new novel, by the author of a production which placed the writer at a single bound, among the first novelists of America."

The scene of the story is laid in Richmond, and the author's aim, is, to inculcate pure and elevated principles, and high-toned morality. The chief aim of the story is to show the beauty of kindness, the influence of purity and self-sacrifice, and that human nature can never lose wholly the *good impulses* given it *by God*. "The author, who bids fair to achieve such an enviable fame, in the world of letters, and who is consecrating his splendid genius to the most elevated purposes, is, John Esten Cooke, Esq., a young member of the Richmond bar."

Received from W. V. Spencer, Boston, "Masks and Faces," or before and behind the Curtain—a comedy in two acts, with editorial remarks, scene and property plots, and all the stage business—making No. 20, of Spencer's Boston Theatre. For sale by C. P. Kimball, San Francisco.

The first number of the new Magazine by Littell, Son & Company, called the "Panorama of Life and Literature," has made its appearance, and bids fair to be quite successful. The table of contents is quite select, embracing Tales, Poetry, and good reading, and must be abundantly attractive. From the low all. The price is only three dollars a year, *and to any post office in the United States, free of Postage.*

Harpers' Magazine for August was laid upon our table this morning, having for the leading articles, "Virginia," "Scott's Battles in Mexico," "Sketches in the East Indies," and "The Newcomes," all finely illustrated. The engravings are far above the average, and will amuse and instruct. It will be read with pleasure, even in the "dog days." Received in Boston, by Messrs. Burnham Brothers, Cornhill.

Also—No. 9 of Harpers' Story Books for Youth. The engravings are very attractive. The story is very interesting, being the history of a South Sea Island Boy, after his arrival in New York. It will prove quite amusing to the young folks. Received by Burnham Brothers, Cornhill.

☞ P. S.—We have just received from G. P. Putnam & Co., No. 10 Park Place, New York, Vol. 1, of the Life of George Washington, by Washington Irving. Bound beautifully in cloth, 18mo., with an accurate engraving of the general man. This Life is to be published in three volumes, and will form a most valuable set for the library. Every true American should have it.

The author says in his preface: "The following work has long been announced as forthcoming, to the great annoyance of the author, and it is only within the last two or three years that I have been able to apply myself to it steadily. This is stated, to account for the delay in its publication."

The present volume treats of the earlier part of Washington's life previous to the war of the Revolution, giving his expedition to the Ohio, his campaigns on the frontier, in the French war, and the other events by which his character was formed, and he was gradually trained up and prepared for a great destiny.

We [illegible] this volume as a work, and [illegible] as it came to hand too late for a general review.

Special Notices.—We are under great [illegible] to R. St. C. Walker, Esq., Secretary of the Pomery [illegible] Agricultural Society, for the First Annual Report [illegible] of said Society, for 1854—one copy each to State Agricultural Society, Boston, and [illegible]

We have received from Silas Thorn, Esq., of [illegible], Duchess Co. N. Y., several [illegible] of the celebrated Short Horn Bull "Grand Duke," purchased by Mr. [illegible], in England, [illegible] Also [illegible] "Duchess," bred by the late Thos. Bates, of England, and purchased by Mr. Thorne [illegible] The [illegible] fine and [illegible] P. M. [illegible] Morris, [illegible] Duchesses are also [illegible] Ag. Society, [illegible] P. P. Johnson, [illegible] the N. Y. S. A. S.—for the past years. [illegible]

We [illegible] to [illegible] our [illegible] and [illegible] the name in [illegible] Ag. Society.

The Drover of the Mint at P[illegible] has [illegible] that 'in pursuance of an authority from the Secretary of the Treasury, [illegible] at the Mint [illegible] after the first day of August next, [illegible] be paid for [illegible] Ship it to California, [illegible] American [illegible]

State Agricultural Society,

OFFICIAL NOTICES.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are *giving* their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is *not?*) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for *premiums*, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The *statute* under which we are organized limits the terms of membership to *ten dollars*. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

O. C. WHEELER, Rec. Sec.

Sacramento, June 23d, 1855.

Agricultural Visiting Committee.

At a meeting of the Executive Committee of the State Agricultural Society, held this day, Gen. C. I. Hutchinson of Sacramento, Rev. A. H. Myers of Alameda, Hon. Sherman Day of Santa Clara, Hon. W. W. Stow of Santa Cruz, and Gen. Allen of Yuba, were elected a Committee for the examination of Farms, Orchards, Vineyards, Nurseries, &c., which may be entered for premiums at the ensuing Fair. Although the time for such entry has expired, yet the Committee is instructed to receive propositions for such entry until the 15th August, being *bound*, of course, to visit only those which may be within their range. Special pains, however, will be taken to answer all special requests. O. C. WHEELER, R. Sec.

State Agricultural Society's Room, July 27, 1855.

To every organized County Agricultural Society.

I AM instructed by the Executive Committee of the State Agricultural Society, to ask the earnest co-operation of every County organization, and to ask of the Corresponding Secretary of each such information of their several Societies as will make known to the Executive how much their Counties will do to further the interests of the Exhibition—what products, what stock and what manufactures may be expected from their several counties; and to solicit an active co-operation in this great work. It is also very desirable that special delegations should be appointed to attend the Fair and to act in convention, and thus aid in promoting and advancing all the great and important interests involved.

The Secretaries or other officers of each County are particularly desired to reply to the call at the earliest moment.

Per order of Executive Committee.

JAMES L. L. F. WARREN,
Corres. Sec. State Agricultural Society.

FREE TRANSPORTATION TO THE STATE FAIR.

The Executive Committee of the California State Agricultural Society, take pleasure in announcing to those interested, throughout the State, that the California Steam Navigation Co., Citizens' Line of Steamers, California Stage Co., Wells, Fargo & Co., and the Pacific Express Co. have liberally and *gratuitously* tendered the services of their respective conveyances for the transportation, to and from the approaching Fair, of such articles as may be designed for exhibition, including stock and persons necessarily accompanying the same.

Every thing of like liberality from our citizens in any portion of the State, will tend to render the coming State Fair of greater interest, and make it worthy of the State and her people.

By order of the Executive Committee.

C. I. HUTCHINSON, President.

SACRAMENTO, July 5th, 1855.

MEMBERS TO THE STATE SOCIETY.—One of the plans to promote the usefulness of the State Society, is to aid them by the value of membership, and this is one of the sure ways to prove your interest and your wish for its success. Gentlemen who desire to give this evidence of their wishes, can call at the Rooms of the Society on Fourth street, between J and K, or address us, enclosing $10 by mail. This amount entitles them to all the privileges of a member, and they and their immediate families to an admittance to the Society's Exhibitions. We hope many will come forward, voluntarily, and enroll themselves.

Horticultural Department.

Important to Friends of the Grape.

(THE following translation having been sent to us by a kind correspondent at Mud Springs, we commend it to the perusal and careful observation of our cultivators of the Grape—should the disease which is doing such injury in Europe, ever appear in California:)

[Translated from the N. Y. Staats Zeitung, for the California Farmer, by Gustave Schmidt, Esq.]

Dr. Franz Vulkan, in Eppan, Tyrol, from the experience that Parasites cannot continue to subist on animal substances, tried the following remedy against the diseases of the Grape:

He took two and a half pounds of common joiners' glue to sixteen gallons water, let it boil therein, entirely dissolve and cool, so as to make the mass not stagnant, and at the same time not too watery, but having the appearance of lie.*

Into this solution the sick grapes were dipped, and after forty-eight hours the berries showed the finest dark green shining color, like the healthy ones.

In the month of September they were full-grown, ripened, and presented the most splendid fruit.

To convince himself that it was just *this* remedy, which effected the desired result, he experimented on three grapes, hanging on the same bunch, and immersed the first entirely, the second half, and the third not at all, in the liquid. The first recovered completely, the second as far as it was dipped into the liquid, the third remained sick, after four weeks sprung up and fouled. On another vine-tree, the stem, leaves and grapes of which were in the highest degree infected, the same treatment was used, and the same result produced.

In places where whole tracts of vine had become afflicted with the disease, single grapes were treated in the described manner; these recovered and gave the finest fruit, while all the rest became the prey of the sickness. Perhaps sprinkling the potato plants, when the disease appears, might have the like good effect.

The application of this remedy causes very trifling expense; being on a vineyard, which brings 25,600 gallons, only six gulden (equal to $2 50.)

* The liquid made of boiling water and ashes.

New Trees and Plants.

THE Agricultural Department of the Patent Office work on introducing new trees, plants and seeds, for experiment in this country, and many valuable results may be expected to flow from these laudable efforts. A few thousands of dollars annually appropriated in this way, will doubtless, in a few years, add millions to the productive resources of the nation. Within a few weeks, we have chronicled, says the N. E. Farmer, the introduction of fig and tamarind trees, two varieties of marine grasses, the morocco dressers' sumach, and three varieties of wheat, from Naples and France. We have now to add several other plants to the list; and first, in importance, is the *Cork Tree*, which is highly interesting:

"About a hogshead of acorns of the cork oak was ordered by the Patent Office from the south of Europe, for distribution in the middle and southern States, for experiment, or to test their adaptation to soil and climate. Much is anticipated from their successful introduction. Should a portion of the present distribution, by any untoward circumstances, fail to answer expectation, care will be taken by the office to obtain another supply for those who feel an interest in growing this useful tree. It will be a subject of national importance, if the introduction proves successful. Plantations should be established on every favorable locality, so that, in due time, the increasing wants of the country may be fully met by the home supply. The tree grows rapidly, and attains a height of upwards of thirty feet. Indeed, even in England, there are various specimens over fifty feet high, with a diameter of more than three feet. Cork trees are much esteemed in southern Europe, and land planted with them is considered the most profitable of all that is unirrigated. They seem in general to prefer those localities where gneiss, sandstone, schistose, and calcareous rocks abound. The substance so familiarly known to us as 'cork,' is the epidermis or outward bark, which sometimes attains a thickness of two or three inches. This is rarely taken off until the tree has arrived at an age of fifteen or twenty years. This operation, which is carried on every six, seven, eight, or nine years, according to circumstances, is generally completed in the months of May and June, while the sap is still active in the tree. Although easy to accomplish, some care is required to avoid injuring the real bark, the 'liber,' which lies under the cork. A circular incision is usually made around the foot of the tree, and another near the branches. Longitudinal cuts are then made; and, finally, by using the handle of a hatchet as a wedge, the cork is detached from the under bark. The larger branches are treated in a similar manner."

A new variety of *Turkish Flint Wheat* has also been imported, according to the following paragraph:

"There have been received at the Patent Office one hundred bushels of Turkish flint wheat, procured by the United States dragoman at Constantinople, from the foot of Mount Olympus. This wheat has already been tested in Virginia and Maryland, and has proved both hardy and productive. It possesses, in a remarkable degree, the quality of long keeping, as was indicated by a sample shown us, which was brought to this country by Captain Porter, of the navy, four years ago. We learn that the Sultan takes a lively interest in the affairs of this country, and has intimated that there are other wheats in his dominions which would be highly desirable for our government to obtain. A plan has been suggested—which would undoubtedly prove highly advantageous to the agricultural interests of this country—of importing large quantities of wheat from the shores of the Mediterranean and Black Seas, for supplying our farmers with seed at about the cost of the original purchase, freight, &c. It has been proposed that the store ships of the navy, which usually return from the Mediterranean in ballast, be freighted with seed wheat purchased by government, and sold to agriculturists at a nominal rate, on condition that they shall cultivate the same, and report the result to some proper authority, by whom the excess of cost may be refunded to them."

The *Pistachio Nut* is another of these new comers, which, we presume, even "Sam" himself would be glad to see naturalized among us:

"This is an extremely interesting tree, not merely on account of its ornamental character, but because it is useful and produces agreeable nuts. For the twofold reason, a quantity of them has been imported from the southern part of Europe, and widely distributed throughout the middle and southern sections of the Union. In favorable situations, it will attain a height of fifteen or twenty feet, and frequently, while yet a mere shrub of five or six years' standing, will bear. Its branches spead out widely without being numerous, and the trunk is covered with a grayish colored bark. The inflorescence takes place about April or May. The male flowers, which apppear first, shoot from the side of the branches in loose panicles, and are of a greenish tint. The female flowers put forth in clusters in the same manner. As the Pistachio tree is dioecious, it is necessary to plant male and female trees together, or they will not produce. The nuts are of an oval form, about the size of an olive, slightly furrowed, and of a reddish color, containing an oily kernel, of a mild and agreeable flavor. This tree is a native of Persia, Syria, Arabia, and Barbary, and is supposed to have been introduced into Italy in the second century, by the Emperor Vitellius, whence it was carried into France, in the southern parts [illegible] indigenous. Later still, that is in 1770, it was introduced into England, where, in sheltered positions, it bears without protection from the cold of ordinary winters. The summers there are scarcely warm enough to ripen its nuts. Although severe frost is to be dreaded, it will bear a greater degree of cold than either the olive or the almond, and hence is better adapted to the climate of our Middle States, where it is thought, it could be cultivated with profit. The finest kinds are those known as the Aleppo and Tunis varieties—the former for its large size, the latter, though smaller, for qualities which recommend it to French confectioners, who cover the fruit with sugar and chocolate, and flavor creams and ices with it. The Sicilian Pistachio nut is used in France in the prepartion of sausages and in seasoning meats. It is considered as a tonic and as beneficial for coughs and colds. It is frequently eaten raw, but oftener in a dried state, like almonds."

This is a good place to mention an instance of individual enterprise in the same line. A gentleman on Long Island, according to the N. Y. Evening Post, has succeeded in growing the best of *Old Java Coffee* on his grounds. He sowed the dry berries in drills, having first soaked them in ashes and water for an hour. When the plants were an inch above the surface, he struck a row of oak scrags for them to climb on. Favored by alternate heat and rains, they have come on finely, and the berries are nearly ready to be gathered.

Horticultural Exhibition—Boston.

BEHOLD the contrast! We copy the following as the report of the exhibition held at the Society's Hall, August 4th, and we notice the last paragraph says, "of the products of the garden, there were *early* squashes, potatoes, corn and cucumbers."

Early! August 4th; we would only make the contrast of the seasons to request our readers to remember that Boston is the garden spot of New England, and enjoys a better supplied market for all these products, than probably any other in the United States, *now excepting California.* Here our markets are supplied with the finest vegetables nearly the year round; no period when we do not have in the markets nearly all these products daily, and fresh gathered too—and nearly all the root crops remain growing the winter long. Radishes, lettuce, spinnago, cabbage, cauliflowers, celery, etc., remain in the open ground, and daily gathered the year round; cucumbers and squashes from January and February to November, corn and potatoes from May and June till October and November, fresh gathered.

We make these contrasts not in boasting, but as the results of the seasons and good cultivation, and to remind our people of the great privileges and blessings we enjoy in this highly favored climate and country:

HORTICULTURAL EXHIBITION.—The Horticultural Exhibition to-day, though not so extensive as usual, was excellent in several particulars. The display of verbenas, petunas, and phloxes was very grand. The collection of the last named flower we have seldom seen surpassed. In the fruit department there were fine displays of grapes, blackberries, currants, early apples and pears. Mr. C. S. Holbrook, of East Randolph, exhibited four plates of most delicious looking peaches, raised under glass. They were very superior. J. Fisk Allen, of Salem, also exhibited a plate of very fine peaches. Foreign fruits were represented by two splendid large pine apples, from Messrs. Curtis & Lincoln's Horticultural Exchange. Of the products of the garden there were early squashes, potatoes, corn, cucumbers, &c.

[From the N. Y. Courier & Enquirer.]

The Next State Fair.

IF "none but the brave deserve" it, the bright, lively village of Elmira well merited the honor of being selected, the first selection from the Southern Tier, as the place of the Farmer's Annual gathering. It is yet several months before the affair occurs, but even at this date, the inhabitants of Elmira are making industrious preparation, and with a liberality of view of their duty and their true interest, which it would have been wise and well had larger communities imitated. These citizens realize that this Fair is to test the question whether the Southern Tier of Counties can sustain reputation for excellence in the culture of the earth.

Mr. Samuel Young, when Secretary of State, and while combating the Erie Railway, was accustomed to allude to this part of the State as past all hope of being anything but the companion of JOHN BROWN'S tract. It bore the offence, and suffered and was strong. The counties, once provided with a great road to the markets of New York, rose rapidly, until from the hour the locomotive leaves Deposit till it reaches Dunkirk, it is within the shriek of the farmer's house, and the Harvest Home of that land is the ingathering of industry and prosperity. And all this will be demonstrated when the days of October shall witness the Annual Festival of those who delve that mine of the earth whose wealth is never exhausted.

There are, and this has sometimes in political strategy and legislative harangue, been doubted, in the Southern Tier of counties a young nation—citizens enough if judiciously distributed among the millions of acres of the West to form a powerful array of new States, and confront the old, and solid, and ponderous commonwealths of the Atlantic, by Senators—just as mighty to vote, however diffusive their thinking and opinion, as those that the millions of New York, or Pennsylvania, or Virginia, send to the august council. These counties will consider this Fair peculiarly their own, and will throng from all the line—the rich and luxuriant plains of Orange—the valley of the Susquehanna—the gentle river that yet woos Wyoming—and from the shores of Erie.

One could scarcely devise a concentration of more available traveling arrangements than are knotted at Elmira. The Erie traverses from Metropolis to Lake—the Williamsport Road is a rapid run to Philadelphia and the South—the great avenue of the Central is reached either by the Canandaigua Road, the which might any one desire greatly to go over, were it for no other purpose than to meet that true hearted gentleman of the old school of courtesy and the new school of intelligence and enterprise—John Grieg—or to roam over that admirable Village, or the Central may be reached at Geneva or Cayuga, by a sail over Lakes, which as one of them reflects a home, one not to find eulogy in this article—and yet, in framing a pleasant wish for friends, it would include a look into these emerald framed mirrors.

The citizens of Elmira not only mean we shall all come, but they also intend we shall stay. Mr. Tyler, Mr. Arnot, Mr. Benjamin, Col. Hathaway, and others of the gentlemen of the vicinage, are now making hospitable arrangements, and there will be all that generous purpose can achieve to make Elmira long remembered in the pleasant days of life.

The State Agricultural Society has at its head, as its President during this year, Mr. Cheever, a gentleman who has been the Society's firm and efficient friend for many a year. It, fortunately for the State, possesses, * * * the invaluable services of its Secretary, Mr. B. P. Johnson, and it is fortunate in energetic friends. One of those, Mr. Charles Morrell, is determined that Elmira shall be fully, completely successful, and he is of the class of men who act in earnest, and work and win. SENTINEL.

A WONDERFUL COW.—A cow belonging to an oil manufacturer in Akron, Ohio, disappeared about five weeks since, and was supposed by the owner to have been stolen. The mill had not been running for a long time, and when a week ago some men entered it to make repairs, the cow was discovered shut up in the flume, and wasted almost to a shadow, having remained there without anything to eat or drink for thirty days. Nourishment was given her, a little at a time, and she is now rapidly recovering from the effects of her abstinence.

Miscellany.

BUILT UPON THE SAND.

BY ELIZA COOK.

'Tis well to woo, 'tis well to wed,
For so the world hath done,
Since myrtles grew and roses blew,
And morning brought the sun.

But have a care, ye young and fair—
Be sure ye pledge with truth;
Be certain that your love will wear
Beyond the days of youth;

For if ye give not heart for heart,
As well as hand for hand,
You'll find you've played the "unwise" part,
And "built upon the sand."

'Tis well to save, 'tis well to have
A goodly store of gold,
And hold enough of shining stuff—
For charity is cold;

But place not all your hope and trust
In what the deep mine brings;
We cannot live on yellow dust,
Unmixed with purer things.

And he who piles up wealth alone,
Will often have to stand
Beside his coffer chest, and own
'Tis "built upon the sand."

'Tis good to speak in kindly guise,
And soothe where'er we can,
Fair speech should bind the human mind,
And love win man to man.

But stay not at the gentle words,
Let deeds with language dwell;
The one who pities starving birds
Can scatter crumbs as well.

The Mercy that is warm and true
Must lend a helping hand,
For those who talk yet fail to do,
But "build upon the sand."

MUSIC HATH CHARMS.

[ON HEARING MRS. W——— PLAY AND SING.]

Lady! thy voice is echoing still
Around my heart, thy music stealing
Like fire electric, it doth thrill
My very soul with purest feeling.

Oh, what were life without thy charm
Melodia? Hail glorious art!
Thy magic powers all griefs disarm,
And soothe the sorrowing, troubled heart.

Lady, thou knowest well the chord
Where Music's deepest tones are found.
The Poet's thoughts thy *soul* hath heard,
Thou giv'st them *power* and sweeter sound.

Chords touched by thee, thy Harp doth know,
Are by a "master spirit" moved.
Obedient they in music flow,
As stars gleam from the blue above.

The purest, holiest joys of earth,
That e'er to mortals here are given,
By Music blessed, receives new worth,
For Music is a "Gift from Heaven.

—*Marysville Herald.* W.

The Rural Preacher.

"The destruction of the poor is their poverty."

Solomon was a wise man, no doubt, for the whole world says so; wise beyond any other man who has yet lived, as is evidenced by the original and collected pithy sayings attributed to him, and handed down to us in the Book of Proverbs; and which are alike the best guide we can take, either for our prosperity in this world or that which is to come.

And now to our text. Why is it that we have so many poor farmers among us? For the very reason, my friends, that they have so little means to do with. Look at the way the poor farmer starts in life. In the first place, he is a poor boy. He works out, after eighteen years old, usually for a poor farmer, like what he himself is now. He never learnt to do much as it should be done, except to chop wood, and do chores, the extent of too many farmer boys' education. He starts in life poor, of course, marries early, and commences work in too many instances on a poor farm. He has little means to do with—poor implements, and few of them—a poor team that cannot half plow his land; but a single hand to do his little sowing, and that but half harrowed in, no wonder that a poor crop is the consequence. He undertakes too much work; of course it is but half done; the year comes round, and although he has labored hard, and lived not over well, and his wife perhaps in sickness, as well as in health, has shared to her full extent his labors, they are still poor at the end of it.

Nor does the succeeding year materially change his circumstances for the better. He never considered that farming, like any other kind of business, required capital to do it profitably; that he needs good implements, strong teams, the best of seed, and help to do everything in season. This, poor man, has been no part of his education. Too "independent" to labor at good wages for another, until he can gather up enough to start fair on a farm, either on rent, or a little piece of his own, he prefers the fate of his own honest poverty, and ill-applied labor, to the "dependence," as he believes it to be, of exchanging his own labor for its full equivalent, and more too, in most cases, which he might receive from his employer. Thus, in this "free and independent" country, we have an overstock of poor farmers. If you want the proof positive, my friends, take up the agricultural statistics of the country, and compare the amount of land products with any other civilized land, and see the meager crops produced here, on a comparatively fresh and naturally rich soil, to what they are in the long-worn and once-exhausted soils of Europe. There, capital is applied to husbandry. No farmer pretends to work land without a cash capital of ten to twenty-five dollars to the acre. This is expended in teams, implements, manures, seeds, stock, and labor. Thus he goes on full-handed. He manures freely, plows well and deep, sows seed enough, harrows it well in, cuts his crops in season, and gets plenty of them. Such men make money in spite of high rents, poor-laws, tithes, and taxes.

Yet there is a difficulty with our American farmers, who are even fore-handed people. Many of them have good farms, naturally, which would be still better if they would work them properly. These men have money in bank, railroad stocks, and bonds and mortgages at interest. But they can't afford to keep any spare capital by them to risk on their crops. That would not do at all. Yet they can send their boys to college, in more than half the cases to spoil them by creating a taste in their minds for professions, which they have no talent for; or they can offer to trade, and sink the capital which their fathers advance them, and in a short time many of them become "poor gentlemen," (the very *poorest* sort of stuff I know) while the parent drudges at home, with a parcel of ignorant Irishmen or Dutchmen to do his labor, and wear out his patience. The daughters, too, are off at boarding school, where they get high notions, and look for sweethearts among the shop and law clerks of the village; who, in the long run, they usually marry, and set up in life as "fine ladies" (a miserable sort of *fine* indeed) instead of getting a good sensible education, and becoming the wives of good thriving farmers, which should be their highest ambition.

Sometimes the "old gentleman" has the pleasure of paying a heavy "indorsement" or two, to aid the speculations of his enterprising sons, or sons-in-law, which may end in the sale of his farm, and the turning off of himself and his worthy helpmate to seek a new home, and battle against the ills of poverty when they have arrived at an age least fitted for it. Their "destruction" is now their "poverty," to a dead certainty—the hard lot of altogether too many indulgent, wrong-judging parents. No, no, my friends; respect your calling—consider it the most honorable "profession" on earth—study it, love it, and devote yourselves to it, and teach your sons and daughters to love it also. But if they will leave the homestead to seek other pursuits, let them do it on their own hook, and you "keep the shot in the locker," to help them at a future time when it will do them some good, so that *their* destruction shall not be *your* poverty.—*Exchange.*

A Bit of Romance.

Five or six years ago, a rich Louisiana planter died leaving only one heir, a daughter, who was not quite seventeen years old. She, together with her fortune, was placed in the hands of a guardian, who was distantly related to the family. Her fortune and her remarkable beauty, attracted the attention of many suiters, among whom was an accomplished young man from St. Louis, whose only wealth was his profession. His handsome person and fascinating manners won the lady's affections: and without the knowledge of her guardian, they were privately married.

Shortly afterwards they removed to St. Louis, where they lived together for a time and a bright fortune seemed before them. At the expiration of a year, the lady having attained her majority, they returned to New Orleans to claim her fortune and live in the splendid old family mansion. They were coldly received by the occupant, who deliberately informed them that the estate had passed into other hands. They at once applied to the law for redress, and going through the protracted formalities of two or three fruitless suits, they were left penniless, and obliged to abandon the case. Friendless and dispirited, they returned to St. Louis, where the husband, like many other husbands, tried to drown the remembrance of his disappointment in the fatal cup. His wife entreated and admonished in vain. A separation was the consequence; and the husband became more dissipated than ever. Driven at last to desperation, the wife applied for a divorce, obtained it, and retired to a convent. This restored the wretched man to his senses; he abandoned his former associates, returned to the paths of virtue, and became an industrious and respectable citizen.

A few months ago, the lady received a letter from the son of her former guardian informing her of his father's death, of his inheritance of the estate, and of his determination to make full restoration; closing with an appeal to her to forgive his misguided parent, and to come to New Orleans and enjoy her fortune. She at once complied with the generous request; and all her inheritance together with the accumulated interest was restored to her.

Now comes the strangest part of this most extraordinary affair. The young man offered her his hand in marriage, and plead with all the earnestness of impassioned love. He reminded her of all their childish attachment, of his deep anguish when she became the wife of another, of the long years of his silent sorrow. All these remembrances came up before her mind, and gratitude plead eloquently in his favor; but at last the wife triumphed over the woman. She thanked him, gave him her simple blessing; told him that she had loved but one, and could never love another and entreated him to take back all her fortune and permit her to return to the convent. Finding her resolution unalterable, the young man consented on condition that she would grant him her return one month. He immediately wrote to the former husband, who was ignorant of what had transpired, offering him a first rate situation, on condition that he would come immediately. The letter was signed by the principal of a well-known firm, who was apprised of every circumstance in the case. As soon as the letter came to hand, the overjoyed receipient took passage for New Orleans. He presented himself at the place designated in the letter, and at once made himself known by showing his credentials. He was conducted to the residence of the generous heir, where he was informed the writer of the letter waited to receive him. His name was announced, and he was conducted into an elegant parlor, and there alone, he met the woman whom he had neglected and dishonored; the woman who had been forced to leave him, but who would not quite give him up.

A few days afterwards, the city newspapers announced the marriage of Mr. ——— and Mrs. ———. The estate was restored to the lawful owners, and the reconciled couple, made wiser and better by adversity, are now living happily together.

It is good to turn sometimes from the cares and turmoils of politics, and contemplate human nature rising up from the depths of misery and despair, casting aside selfishness, and reaching that standard of purity and happiness which so few attain.—*Cleveland Leader.*

Ladies' Department.

☞ **To our Lady Correspondents.**—We shall be most happy at all times to receive communications upon every subject touching "home blessings and comforts," the subjects of Education, Domestic Cookery, and Housewifery in all its departments; Essays upon the influence of the Mother, Wife, Daughter and Sister. These all will be most acceptable, and their publication tend to a more enlightened education upon such subjects. Writers can indulge their own feelings either in Poetry or Prose. It is our desire and intention to occupy two or more columns to the "Ladies Department," weekly, and we trust there are many very able writers that only need to *let their light shine* to be known and honored in this land. As our journal is intended as a "Family Paper," we trust this subject may be esteemed worthy those to whom it is addressed.

[For the California Farmer.]

Letter from "Betty's" Uncle.

Mr. Martin sends his compliments to the the Editors of the Farmer. His neice is now at Monterey, where she went to nurse a sick cousin of hers, some weeks ago. As she is now convalescent Betty is expected next week. Meantime, as she has, it seems, been gaining new friends, Mr. Martin can only say that his house shall always be open to every friend of his neice's, who is not only a good housewife, but equally good and good-looking; and whose simplicity of taste may be perceived from the following careless lines, which Mr. M. found in her room the other day. Mr. M. would be glad to see Rural Tom and Squatter at Martinfield.

Martinfield, 1st Sept., 1855.

UNSPOKEN WISHES.

O give to me some little home,
Where mad ambition ne'er may come
My quietness to annoy,
Some humble cot—some lowly cell—
Where, unmolested, I may dwell
In peacefulness and joy.

I ask not honor—wish not wealth,
If I've sufficiency and health
What more could I desire?
Or what ingratitude were mine,
If, with such gifts, I could repine,
And after more aspire!

The treasures of a peaceful mind,
By sense and gentleness refined,
Afford more dear delight
Than all that riches can procure;
And are more permanent and pure—
More beautiful and bright

Than all the glitter, pomp, and pride,
Which heart from heart too oft divide,
But never bliss afford.
Then grant me some companion kind,
Whose similarity of mind
May with my own accord;

One, who, whate'er my fate may be,
Would feel and sympathize with me,
And aid and counsel give;
For with the tender and the true,
Whatever may occur to you,
How happy 'tis to live!

Give me such gifts, but give me more,
That I, whatever I implore,
Whatever Heaven impart,
May know—may feel, whate'er my fate,
From whom proceed the gifts I get,
And have a grateful heart.

Betty Martin

Church Etiquette.

The New York Tribune, after stating that several of the Episcopal Churches in that city have made it a rule that all seats unoccupied before the reading of the second lesson shall be free for strangers to occupy, says:

"This is very well, but there is another improvement in the manner of seating people in churches which could with great propriety be adopted; we mean the practice now too rare, of gentlemen retaining their pews so long as there is plenty of room even though a lady present her offer accommodation in the same. But according to some ancient superstition which now prevails almost universally, a female must perforce occupy the extreme inside seat, although to enable her to get that a whole gentlemen who have taken refuge in the same pew have to pick up their hats and march out in Indian file in a interesting procession, only to return the next instant and pen the lady up in the orthodox corner of the seat. If there is any law of politeness, good breeding, or church etiquette which requires gentlemen to incommode themselves and annoy the congregation that a woman may sit on one end of a seat rather than on another, it has hitherto been omitted from our code of proper behavior. This barbarous custom is not quite so general as formerly, but there is still a great number of exacting females who demand its strict observance, we hope not for the purpose of making a stir in the meeting and attracting public attention to the charms which might otherwise pass unnoticed. If there is any other motive for creating this stampede among the pantaloons twenty times every Sunday in every place of worship in the city, it is hidden from our understanding."

We refer the above to our lady friends, knowing that fashion and custom will adjust the matter. We know it has always been the custom for a lady to occupy what is called the "inside head of the pew;" yet we could never see the necessity for, it, for surely more attention and courtesy could be offered in passing books from one end of the pew to the other, for friends or relations. We trust that California will set a new and better example, and thus do away with a custom or fashion that is and must be founded on error.

[For the California Farmer.]

SELF-CONGRATULATION—AN ACROSTIC WRITTEN FOR A LADY.

Enough of fame for me, and ladies' praise,
Lord, let thy servant now depart in peace!
In vain let critics now deride my laye,
Zoilus-like, their tongues had better cease.
Against the tide of fortune, and the wind,
Blown by the breath of beauty on my sail,
Envy may sneer, and laggards left behind
Try to bear up, but 'tis of no avail;
He whom the ladies love must needs prevail.

Hence then dull care! I'll dwell no more with thee,
Offspring of Hate, and sulky Melancholy!
Round my broad brow let not thy nightshade be,
Nor meaner leaves than bays on the green holly,
Entwined. So shall I sweetly sing immortal laye,
Roused by a spark of love time-left of former days.

Lyricus.

A Good Price.—The Evening Gazette gives the following: "A few months since a lady in this city, on her wedding day, received from a friend in New York a very shabby looking picture, with the wish that it might adorn her parlor. It was so obscure that one would scarcely detect the outlines of the figures which it represented, but on account of the giver it was sent to be restored. While there, an Englishman saw it, and offered fifty dollars for it, which offer was refused by the lady, on account of its being a gift. The Englishman urged his offer, and, calling upon the lady, said he should regard it as a favor if she would allow him to present her with one hundred dollars, and take the painting. Of course she refused, when he increased his bids gradually from one hundred to one thousand, and finally asked her to set her own price, as it was one of six paintings by Murillo—two of which were destroyed by fire, and three of which were in Europe. So certain is he of this, that he stands in readiness to pay as high as $10,000 for the painting. Quite a pretty sum for a young bride."

Extraordinary Cure.—A fashionable lady of our city required the services of one of our first physicians, which were rendered with a good-will certainly, and with a pretty good degree of success. Meeting her soon after in company, Galen inquired what had been the result of his medication,—on the whole? "Excellent—excellent," replied she with great gratitude in her voice, and with eyes that swam in tears; "excellent my dear doctor; why, now I can dance till half after three in the morning, and when I began your course, I couldn't possibly dance later than three o'clock, without being utterly exhausted, I shall recommend all my friends to your care."

To our Friend Squatter, from Pike.—Betty's heart must be made of steel to resist such appeals. What glorious love letters they will be able to write each other by and by, when better acquainted—"all in poetry"—poetry at breakfast, poetry at dinner, poetry at supper; in fact they can live on poetry and love, for Squatter acknowledges he can live on love, having no means of any account. He does not forget in his P. S., however, to remind Betty of the ten thousand. We anticipate an answer shortly from Betty, for him, for "49," and "Rural Tom."

Read This, Girls!—Suppose a young man of good [illegible] and of course good prospects, to be looking for a wife—what chance have you to be chosen! You may [illegible] trap him, or catch him but how much better to make it an object for him to catch you! Become yourself worthy of [illegible] and you will need no [illegible] or managing brothers to help you to find a market. Why don't you remember this, girls?

[illegible]

Praise of a [illegible] of [illegible] of commendation [illegible] enterprises.

GLEANINGS FROM OUR EASTERN EXCHANGES.

THE GREYTOWN AFFAIR.—The New York Herald says, that the sufferers by the bombardment of Greytown have arrived at Washington to present their claims before the Court of Claims, and that those claims amount to about *five millions of dollars!*

THE EASTERN RAILROAD DEFALCATION.—The Investigating Committee of the Eastern Railroad Company are still assiduously exploring the labyrinth of books, accounts and vouchers, placed under their control for that purpose. Up to Saturday they had discovered no further wrong doing that has already been made public. The late treasurer is constantly in attendance, and has thus far proved quite useful to the Committee in making explanations, &c.—*Bost. Atlas.*

DEATH OF FATHER LAMSON.—A correspondent of the Boston Herald announces the death of Silas Lamson, so well known to our citizens as a monomaniac. He died at Shelburne Falls, at the residence of his son, on the 29th July, aged 79. He was many years a resident of Sterling, where he was an extensive manufacturer of scythe-snaths, having himself invented the most approved one in use. He there accumulated considerable property, and brought up a large family.

He was at one time united with the Baptist church; but having adopted peculiar views of religion, and conceived that he had himself a call to preach and teach a new doctrine, he eventually separated from his friends and family, and has for many years been a sort of wanderer. He has resided many years in this city, and although always harmless, has occasionally come under the ban of the law on account of his idiosyncrasies. His long white beard and white dress, and general patriarchial appearance, have marked him as one of the characters of the city. The correspondent of the Herald says:

"He came back to reside with his wife and sons about one year ago, after a stay in Boston and other places for several years, and has during that time been very quiet and laborious, affording great consolation to his family."

THE HEATED TERM.—They have warm weather in Washington as well as in Boston, for a few days as our venerable friend the National Intelligencer thus acknowledges:

We have not seen an individual for two days, who did not seem to be in a state of dissolution, and we are ourselves so given to "the melting mood," that we must either lay down our pen or *run away.*

CROPS IN HOOPA.—The Humboldt Times says the wheat crop of Hoopa is now harvested and will equal in yield that of any portion of the State or the world; the farmers in that valley not having been troubled with smut or rust. Captain Snyder's crop will exceed five thousand bushels, besides seed and a fair amount for home consumption. His proximity to the mines will give him the benefit of the price of packing from this place, which is three and a half cents in addition to its value here. The yield of the barley, oats and root crops are also very flattering to the beneficiaries.

A BIG APPLE.—The editor of the Petalnma Journal was shown an apple grown by a Mr. Cooper of that town, of the following dimensions: weight, 13 1-2 ounces ounces; circumference, 14 1-4 inches.

TO ADVERTISERS.

IN order that our patrons may have some idea of the extent of our circulation in this country and abroad, and the benefit which may be derived from advertising in our paper, we publish the following list as comprising most of the principal places in which our journal circulates, showing how useful it is to those who wish their business widely known:

San Francisco, Sacramento, Stockton, Marysville, Grass Valley, Rough and Ready, Nevada, Downieville, Yreka, Shasta, Columbia, Jackson, Sonora, Colusa, Sonoma; San Juan, Monterey county; Santa Clara, Santa Rosa, Santa Cruz, San Jose, Mission San Jose, Napa, Nicholaus, Benicia, Petaluma, Placerville, Pajaro Valley, Oakland, Alameda, Union city, Alvarado, Auburn, Bodega; Bidwells, Butte county; Hamilton, Ione Valley; Knight's Landing, Yolo county; Los Angeles, Monterey, Martinez, Uniontown, Humboldt Bay; Port Townsend, Oregon; Salem, O. T.; Oregon City, O. T.; Portland, O. T.; Washington Territory. To every Post Office and Express Office in this State, and to nearly every State and State Society in the Union.

addition to this it is sent to many of the principal cities in England, Scotland, Ireland, France and Belgium.

MARRIED.

On the 26th Aug., in Marysville, Henry Taylor and Miss Cornelia Winion, all of Yuba county.

On the 22d Aug., in Grass Valley, by J. P. Evans, Esq., Jas. Berry and Miss Jane Roe.

On the 24 Sept., in San Francisco, by Rev. Dr. Scott, John Pfeiffer and Mrs. E. C. Meyer, both formerly of Germany.

On the 4th Sept., in San Francisco, by Rev. Dr. Scott, John M. Duncan and Miss Sarah Cole.

On the 24 Sept., in San Francisco, by Justice Bailey, John Doyle, of Ireland, and Mrs. Mary Maguire, of San Francisco.

On the 2d Sept., in Stockton, by Rev. Mr. Krob, Mr. Henry Schmidt and Miss Ida Minter.

DIED.

On the 24 Sept., in this city, Mrs. Mary E., wife of James H. Hardy, aged 22 years, formerly of Kentucky.

On the 4th Sept., in this city, Joseph W. Gifford, of erysipelas, formerly of Poughkeepsie.

On the 2d Sept., in Georgetown, Samuel Dearth, formerly of Indiana, aged 27 years.

On the 2d Sept., in Oakland, Alameda county, Fannie Louise, youngest child of Thos. P. and Mrs. L. Hamilton, aged 1 year.

☞ **Religious Notice.**—The "Pacific Baptist Church" (Rev. O. C. Wheeler, Pastor) will hold Divine Service every Sabbath, at 10½ A. M., and 7½ P. M., in "Temperance Hall," corner of 10th and J streets. The public is respectfully invited to attend. Seats free. v4-4

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President.

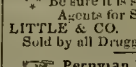
☞ **Consumption Can be Cured!**—Sir James Clark, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a Cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other modern pathologists."

The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope, and reanimate failing courage in the heart of every sufferer from this disease.

The remedy which we offer has cured thousands.

WISTAR'S BALSAM OF WILD CHERRY, not only emanates from a regular physician, but has been well tested in all the complaints for which is recommended.

*** Be sure it is signed I. BUTTS on the wrapper.



Agents for San Francisco, B. B. THAYER & CO., and LITTLE & CO.

Sold by all Druggists. v4 8

☞ **Peruvian Febrifuge.**—The formula for this preparation is the result of practical observation and experience for a number of years, in the treatment and cure of Fever and Ague, and such has been the uniform success in its use, that no case is known where this valuable remedy failed to cure when timely administered. A single trial will afford relief, and a few doses convince the patient that he has found the real "El Dorado" of a permanent cure for Fever and Ague and the various other grades of Fevers.

El Dorado Building, corner of J and Second streets, Sacramento. v4-8

California Brooms.

"Encourage Home Manufactures."

THE undersigned are happy to announce to the community that they will offer to them about the 10th of August,

Three Thousand Dozen California Brooms.

These brooms are made from stock grown in California. The broom brush was raised in Sacramento county, (the queen of prairie lands) the handles from timber from our own mountains; and the work by our own citizens. We have, 'tis true, imported machinery for the manufacture of brooms; but hope ere long that the genius of California will produce machinery for all the departments of labor.

We shall have samples of our Brooms at the State Society's Rooms on Fourth street, and at our own store, when we trust our citizens will be happy to give preference to the home industry of California.

We shall commence immediately the work of manufacturing, and those who wish our brooms should send in their orders. They will be answered according to their date, as we expect sale as fast as we can manufacture them. We intend they shall be as good, if not the *best brooms* ever offered for sale in this State. LUSK & CO.,
v4-6 Corner of Fifteenth and O streets.

Benicia Female Seminary.

THE Fourth year of this institution opens July 23, 1855. This is one of the oldest Female Seminaries in the State, and therefore well known. There is now a full corps of teachers, and those who are well qualified to fill their respective departments. A German lady, and an artist in her profession, is teacher of Music; and a French lady, as skilled in Drawing, is teacher of French and Drawing.

The School and Boarding Department are entirely under the supervision of the Principal.

Terms.—(Payable quarterly, invariably *in advance.*)

For Board and Tuition in English branches, per week...$7 50
Washing, per dozen.....1 50

Extra Charges.

French, Spanish and Drawing, per month.....$3 00
Music, with use of Piano, per month.....10 00

For further particulars, address
v3-26 MARY ATKINS, Principal.

To the Creditors of Enoch Epps, deceased.

NOTICE is hereby given to all persons having claims against the late Enoch Epps, deceased, to exhibit the same, with the necessary vouchers, to me at my residence on the "Burns Ranch," in Napa Valley, in the county of Napa, within ten months from this date, or be forever barred.

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRICL. SOCIETY, 1851, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, - - - - - - 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, - - - - - 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, - - - - 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circulars, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

v3-9-3m W. C. WALKER.

Important to the Dairymen of California.

HORACE GUSHEE,

No. 51 Washington Market, San Francisco,

WHOLESALE AND RETAIL DEALER IN

FRESH BUTTER, CHEESE AND EGGS,

HAVING been engaged in the sale of the products of the dairy for the past two and a-half years in San Francisco, would take this opportunity to return his thanks to those who have favored him with their business, and respectfully solicits a continuance of the same. Consignments from any part of the State by any of the various packets or steamboats, directed to me, will meet with prompt attention, and proceeds of sale forwarded as directed.

Liberal advances made, if required.

Dairymen, whenever in the city, are invited to call and see the various kinds of Butter and Cheese which are received daily from the ranches. v4-10

Cooper's Eye, Ear and Orthopedic Infirmary,

San Francisco.

No. 14 Sansome street, near the Russette House.

PATIENTS laboring under Disease of the Eye, the Ear, and those afflicted with all varieties of deformities, resorting to this Institution, will find at once a home, where Miners as well as others can be accommodated with board and comfortable rooms, in plain or costly style, according to their taste.

Dr. Cooper has visited all the important hospitals in Europe, for the purpose of extending his knowledge of medicine and surgery, and will give the Infirmary his immediate supervision.

N. B.—All Surgical Operations free to patients who present themselves at the *clinic* on Wednesdays and Saturdays.

For particulars apply to DR. E. S. COOPER, at the Infirmary. v4-10 3m.

AGRICULTURAL, &c.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

Agricultural Tools and Seeds.

PARKER, WHITE & GANNETT, 47, 49 and 63 Blackstone street, Boston, Mass., manufacturers of Plows, Ox Yokes, Store Trucks, Fan Mills, Horse Powers, Mowing Machines, Reaping Machines, Horse Powers, Churns and other farm machinery and tools; Sluice Forks, Grain Cradles, &c., &c. Also, growers and importers of all kinds of Garden and Field Seeds and Trees.

These seeds are of the very best quality, such as have always given satisfaction to our customers, and are put up for shipment in air tight cases. v3-18

Agricultural Warehouse,

193 *Front street, New York.*

THE subscriber offers for sale an assortment of Agricultural Implements of the latest and most approved kinds, among which are the celebrated Premium Plows, which were awarded the highest premium of the American Institute in 1846, 1848, 1849, 1850, 1851, 1852 and 1853. Also, Eagle, Centre Draught, Peoria, and all other plows in general use.

Pitt's, Hall's and Smith's Horse Powers and Threshers, Burrall's, McCormick's, Hussey's, Seymour & Morgan's, and Ketchum's Mowing and Reaping Machines. Yankee self-sharpening Straw Cutters—the best article in use: Corn Shellers, Fanning Mills, Picks and Pick Handles, &c., &c.

Chi! Chi!! Camphene.!!!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at 51 K street, Sacramento for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure genuine.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices. [v4-1] WILLIAM BAILEY.

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets,.....MARYSVILLE.

☞ Open all Night. ☜

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.

v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st† C. M. DAVIS, Proprietor.

International Hotel.

THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms*. Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.
SAN FRANCISCO.....CAL

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

To Farmers, Hotel Keepers, Ranchers & Others.

BRADSHAW & CO., having removed into their New and Spacious Store, and being regularly supplied from the States by every clipper, enables them to have the largest and best stock of GROCERIES AND PROVISIONS in the State, and at Low Prices.

Persons living at a distance can always have their goods packed and shipped, free of expense. Remittances can be made through all the expresses or by mail. Our stock consists of

Powdered and Crushed Loaf Sugar;

v3-24 J. L. POLHEMUS.

New Invention!
Now, Count Your Chickens!!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls. After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *one to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

The invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be imparted. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3-26 Third street, South Beach, near South Park.

Removal.

THE Office of the Pacific Oil and Camphene works is removed to No. 8 Front street, between Clay and Commercial, Polar, Sperm, Lard, Neat's Foot and Tanner's Oil, Camphene, Turpentine, Burning Fluid constantly on hand and for sale at the lowest market price.

SANDS' SARSAPARILLA,
IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of *Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.*

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y., July 20, 1851.

MESSRS. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1850 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which there has now more than twenty-five preserved in a bottle, varying from one-half to one and a-half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began to manifestly to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

H. & R. S. HART, A. M. TROWBRIDGE,
GEO. T. DEAN, C. EASTWOOD.

Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, 100 Fulton street, corner of William. New York. Sold also by Druggists generally throughout the United States and Canadas. Price $1 per bottle, six bottles for $5.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento v4-5 3m

WAINWRIGHT, BANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 *Merchant street, San Francisco, Cal.*

WE respectfully inform our friends and the public generally, that we have connected with our business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for the transaction of business in all who may favor us with their patronage.

As these new branches of business are entirely new features in having been heretofore introduced to the city, we deem it proper to make mention of them, and explain to our fellow citizens, how to avail themselves of

House Brokerage.

This department embraces the renting and selling of Houses, Stores, Offices, Rooms and Real Estate in general, and we receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having a number of Rooms for the reception of persons wishing to purchase or rent property, we feel confident that we can procure for persons wishing to rent Houses, Rooms and Places of Business of all kinds, in every part of the city where required. All persons who may have vacant premises with which they desire to be entrusted for the same, and who have a desire to be rented, will find it to their interest to call on us.

General Directory.

This department will contain a register, (open to the inspection of all persons,) of Citizens, with the names of their residences by reference to which we will be able to find them. Also, a list of Merchants, Mechanics, Artists, Professional Men, Hotels and Boarding Houses, with the names of their proprietors, and the number of rooms in each, and the terms per week, and a description of the location of each. Also, a list of Churches, Schools, Societies, Lodges, Public Offices, Banks, Insurance Companies, Steamboats, Stages, Omnibuses, Express Companies, Auctioneers, Commission Merchants, Lawyers, Physicians, Dentists, Clergymen, Teachers, Public Officers, Notaries Public, Justices of the Peace, Constables, Sheriffs, Deputies, Police, Fire Companies, Fire Wardens, Harbor Masters, Pilots, Boatmen, Ferries, Wharves, Piers, Docks, Slips, Ship Chandlers, Ship Carpenters, Caulkers, Riggers, Sail Makers, Boat Builders, Ship Owners, Ship Brokers, Ship Agents, Ship Masters, Ship Mates, Ship Stewards, Ship Cooks, Ship Boys, Ship Carpenters, Ship Caulkers, Ship Riggers, Ship Sail Makers, Ship

Varieties

We may consider life as a fairy tale, in which every good action must be rewarded by a visible wonder.

"Ma, I want a sled. I do want a sled. Can't I have a sled, Ma?" "Certainly, my son; I suppose so. Ask your father." "I don't like to ask him, ma." "Why, what nonsense. Ask him." "No ma—you ask him—*you've known him the longest!*"

The London papers speak of an invention which has just been submitted to the test by the scientific authorities—a leather cement, so strong and adhesive that boots and shoes are made with it, in which not a single stitch is seen or required, and the process of mending is so simple that every man may be, if not his boot-maker, at least his boot-mender.

One of the Sun-flowers.—The Placerville American says that in the garden of Mr. Lemuel Dougherty, Upper Placerville, is a single sunflower stalk ten feet high, surrounded by forty-five branches, that, spreading to every side, covers a surface of twenty-four feet in circumference. On the main side stock are two hundred and thirty-five heads in full bloom. It is certainly a most magnificent vegetable production.

One day as Judge Parsons was jogging along on horseback, over a desolate road, he came to a log house, dirty, smoky and miserable. He stopped to contemplate the too evident poverty of the scene. A poor, half-starved fellow, with uncombed hair and unshaven beard, thrust his head through a square, which served for a window, with—"I say, Judge, I ain't as poor as you take me to be; for I don't own this 'ere land!"

Donations.—Mr. H. G. Somerby, a passenger by the steamer Asia, was the bearer of several valuable donations from George Peabody, Esq., of London, to the Peabody Institute at Danvers. One of them was the cane which was used by Dr. Franklin while in London, and another was a volume of autograph letters from Washington, Franklin, Jefferson, Jay, Henry Laurens, Robert Morris, Gen. Schuyler, Robert Livingston, John Quincy Adams, and other eminent Americans.

During the last war, a Quaker was on board an American ship engaged in close combat with an enemy. He preserved his peace principles calmly until he saw a stout Briton climbing up the vessel by a rope that was hung overboard. Seizing a hatchet, the Quaker looked over the side of the ship and remarked: "Friend, if thee wants that piece of rope, thee may have it!" when suiting the action to the word, he cut off the rope, and down went the poor fellow to his long watery grave.

A Young Farmer.—A son of one of our merchants, about 15 years of age, having conceived a taste for farming, has asked and obtained the loan of a piece of land about an acre in extent, and devoted the whole of his time between schools to its cultivation. He has planted part of it with potatoes, which are coming along finely; set out eight hundred cabbage plants, and has a variety of other vegetables, all in a flourishing condition, and has performed the whole of the labor upon it himself. Whenever we hear of a lad of this stamp, we feel certain he possesses that industry and energy that will be sure to lead to success in any business he may undertake in after years.—*Nantucket Mirror.*

Ingham's Improved Smut Machines.

These Machines combine all the apparatus necessary to clean a Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekiss, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM

N. B.—All information given, and orders left with Warren & Son, Sacramento, will be attended to.

The following certificate is among the number received; others can be referred to in quantities:

"This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing Grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mill's,
v4-9 3m Pine street, San Francisco."

THE
CALIFORNIA FARMER,
And Journal of Useful Sciences,

Published every Friday Morning, at the Office on Fourth street, Sacramento City.

THIS Journal will contain Valuable Agricultural Statistics, from all parts of the States, together with Original Scientific and Literary articles. The aim of the proprietors will be to make it an acceptable FAMILY PAPER, containing interesting matter relative to Household Literature, from several able lady correspondents.

To those who desire to make known the *real condition of California*, so as to induce kindred friends to come and settle in our State, the FARMER will be found to be very a valuable paper for mailing to the States.

WARREN & SON.

P. S.—Advertisers will please look to our notice in another column. v4-9

A Valuable Newspaper Route for Sale.

WE would offer a valuable Route of our Paper for sale to some enterprising young man of good address. It is the Route in the City of San Francisco. The Paper is rapidly increasing in interest and circulation, and to a suitable person a very liberal salary can be made.

Apply to EDITORS FARMER at Sacramento. v4-8

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Pruteun, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

Directions.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger part above the tube, that the piston may not be broken. Put the cap on light ly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adopted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upward, the piston pens with the cap downwards.

Use good ink, free from sediment; Headley & Field's American Fluid, also Brynn & Wheeler's, and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-5

TOBACCO.

Virginia Manufactured Tobacco Agency.

GREENE, HEATH & ALLEN have removed from Calhoun street to the cor. of Washington and Battery streets where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call Amongst the brands offered are the following:

200 boxes Crumpton's Four Aces;
75 half boxes do Medal;
50 packages do Sovereign of the Seas
60 do do Bride of the Pacific;
100 boxes Halsey's Four A's:
100 do Saunders' Harry of the West;
50 do James Boyd's Gold Leaf;
50 do do Anna Bishop;
25 do A. Thomas' Club House;
50 do Ferguson's Star of the West;
50 do Miller & Crenshaw's Bluff City;
20 do Royster's Mary's Own;
40 do do Invincible;
100 do Thornton's Cantelope;
50 do Dickinson's Witch's Eye;
50 do Crosby & Wootten's Metropolitan.

In addition to the above, we have 2,000 packages of ordinary brands; and as we sell exclusively on Commission for the Manufacturers of Virginia, we can furnish the trade with any quantity or quality required, at the lowest rates. v3-16

50,000 GRAIN BAGS for sale very cheap for Cash, at North's Sewing Factory, 145 Sansome street, between Washington and Jackson sts, San Francisco. v42.

MEDICAL.

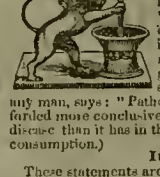
PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

Brooklyn, N. Y., Aug. 25, 1853.



Messrs. A. B. & D. Sands—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,

EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." Dr. Carswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

Dr. A. H. Macanair, of Turboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. Shaw, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

Samuel A. Walker, Esq., a gentleman well known in this vicinity, writes us follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

Hon. Samuel S. Perkins says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

MISCELLANEOUS.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to Vance's who wishe PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments combining lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted:

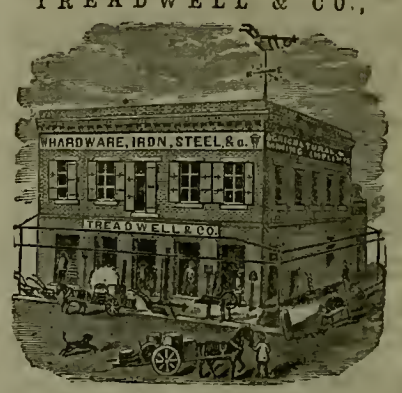
Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a Lifting or Force Pump, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated. N. HUNT,

26 Devonshire street, New York.

Also for sale—Best quality of Leater Belting and superior Shuttle Sewing Machines.

☞ Orders for the above received at this office. v4-33m.



OLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)
157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at Collins & Co.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

[For the California Farmer.]

Our Soil Inexhauatible—Reasons why.

MESSRS. EDITORS: The following very able exposition of the beneficial effects of drought on land, is from the able pen of Prof. Higgings, in a late number of the Philadelphia Ledger, and contains much truth and presents one reason why our arid plains so agreeably disappoint strangers in their natural and artificial productions, especially the latter. Can any one, after these weighty reasons, say that deep plowing and thoroughly pulverizing soil is useless, or "worse than useless," as some say?

The State Agricultural Chemist of Maryland, (Mr. Higgings,) has published a paper showing the necessity of droughts to replenish the soil with mineral substances, carried off to the sea by rains, and also taken up by the crops, and not returned by manure. These two causes, always in operation, would in time, render the earth a barren waste, in which no verdure would quicken, and no solitary plant take root, if there was not a natural counteraction by drought, which operates to supply this waste in the following manner: During dry weather, a continual evaporation of water takes place from the surface of the earth which is not supplied by any from the clouds. The evaporation from the surface creates a vacuum so far as water is concerned which is at once filled by the water rising up from the subsoil of the land; the water from the subsoil is replaced from the next strata below, and in this manner the circulation of water in the earth is the reverse to that which takes place in wet weather. With this water also escapes the minerals held in solution, the phosphates and sulphates of lime, carbonate and silicate of potash and soda, which are deposited in the surface soil as the water evaporates, and thus restores the losses sustained as above stated. The author of this theory appears to have taken considerable pains to verify the fact by a number of interesting experiments.

The Scientific American, the promoter of every good and useful work, adds the following comments, which are worthy of attention:

* * In connection with this let us point out the benefits of keeping the soil well pulverized or cultivated, to prevent the mineral and other food of plants being carried away by rains. England has a moist climate, subject to great rains, and is seldom visited by droughts, and yet more wheat is raised to the acre than anywhere in the world. Why is this? Simply on account of the universal practice of draining and keeping the soil in a highly pulverized state.

When the soil is kept porous, it absorbs ammonia and carbonic acid gas from the atmosphere, and when rain falls these are carried down into the soil porous soil, and are taken up as food by the plants. If the soil were hard and caked, the rains would run violently off, carrying away some portion of the soil, and with it the food so necessary to supply the plants with nourishment. The benefits to be derived from keeping the soil of cultivated fields well pulverized and open cannot be too highly extolled.

The above elucidates the reason why we see so much vegetation upon the surface of our soil in the latter and dry season. COLFON.

We commend the above important truths to the cultivators of California. We had upon our table the article from the Scientific American, ready for the press, with the remarks that follow, when "Colfon" appeared; and we rejoice that these are awakening attention. We have for a long time endeavored to urge upon them the value of subsoil plowing, and the absolute necessity of this method of cultivation as of actually more value than all the systems of irrigation yet invented. Should any one desire to see the practical result of a fruit orchard established without irrigation, and the trees loaded with fruit—all the result of careful cultivation upon the subsoiling system—go to Messrs. Thompson & Brother, Suscol Ranch, Napa Valley, 15 miles from Benicia.

BRITISH CORN TRADE.

A continuance of fine growing weather, with such an abundance of rain as to promise a fair quantity of hay in many places where, till lately, it was despaired of, together with the absence of a demand for France, have both served to check the upward tendency of the Corn Market, and to occasion some reduction in wheat prices. On carefully surveying the numerous agricultural reports of last week, it will be seen that more than two-thirds of them, including the whole United Kingdom, are in favor of a good average crop, several entertaining anticipations beyond it; that the unfavorable reports are less than one-third of the whole, and in most cases limit their complaints to the light land; and that even on these lands, with scarcely an exception, the wheat plant looks unusually healthy in its color, yet that all expect harvest will be about a fortnight behind the average time; that moreover, there is an unusually large breadth of land sown, and that the cold and dry weather has had a conservative effect on those fields which were sheltered. Nevertheless, a "Constant Reader" has thought well to resuscitate the cry of famine on the score of "philanthropy," with some surprise and concern that we cannot take it up. Vegetables, though growing at an enormous rate, are to be forgotten. His own admission that the fens last year grew six to eight quarters, when a four very moderate average amount four quarters, very little sown to be raised, is to be served in the same way; and the rise of 10s. per quarter since his letter of 1st March is to be held as proof that his apprehensions were just, when every one else sees well aware that the cessation of the Vienna Conference occasioned half the rise and the continued ungenial weather the other half. These columns are open to truth—but we hold it to be ungrateful to Providence—to forget the past and distrust the future. The blooming time—the most critical of all—is coming, and the later this comes the safer it must be; as, be it remembered, the wheat plant is from more southerly regions.

The deliveries from the farmers still keep up well, and the numerous retirements of samples from unsatisfactory markets, only confirms our repeated belief, that for our own wants there is plenty in the land. We learn that during the week some English wheat on the coast has been purchased for Belgian account at 76s., where the market keeps up better than in France; and some cargoes of Egyptian have been placed for Ireland and other parts at from 44s. to 48s. per quarter, cost and freight, though very little has been doing in other qualities of foreign afloat. A cargo of English rye on the coast has also been picked up for Belgium at 51s. 6d., but it will be impracticable to expedite more of this grain. The deliveries of wheat last week were 89,287 quarters, which, though short of the last, exceed 1854 by 38,105 quarters. The whole foreign imports for the month of May were 497,831 quarters. Flour 159,244 cwt.

GRAIN IMPORTED INTO GREAT BRITAIN.

The sources whence England drew her supplies of wheat, in 1854, were as follows:

	quarters.
Russia	506,839
Prussia	672,842
Denmark	218,415
Hanse Towns	315,386
France	143,078
Moldavia and Wallachia	119,504
Turkish Dominions	163,294
Egypt	302,985
United States	417,607
Total quarters	3,431,227
Total bushels	26,449,816

CORN TRADE IN FRANCE.

The rise in the price of corn appears again to be checked on the Halle of Paris. Sales were very difficult during the week, the Northern Departments having suspended their demands. The apprehensions for the growing crop were totally ungrounded. Wheat was three weeks backward, and it was feared that a sufficient quantity would not be forthcoming to meet the next harvest; but the few day's heat of last week have produced a favorable change. If the warm weather lasts until the end of June, the crop will then be only eight days behind its time. The best sorts of flour sold on the Paris market as high as 94f. per sack of 157 kilogrammas. They subsequently fell to 93f., and the other sorts fetched from 88*a*92f. The offers of wheat also exceeded the demands. The measure of 120 kilogrammes was held at from 52*a*53., but the last price was only obtained for the first quality. The average price was 51*a*52f. The rise is pretty general in the provincial markets. The inundations in the south have destroyed the crops in a number of localities—a circumference which tended to maintain high prices at Bordeaux and Toulouse. At Algiers the corn market is plentifully supplied, and arrivals along the coast are continual. The principal part of the grain, however, belongs to the War Administration. The crops in Algeria present the most favorable appearance; the temperature is extremely favorable, and the extent of ground sown is treble what it was two years ago. The cattle markets of Sceaux and Poissy are most abundantly supplied. Prices, nevertheless, are still looking up. Some of the finest animals which figured at the last cattle show in the Champ de Mars have sold very high. A cow of the Deven breed fetched 2800f. Mr. Jonas Webb disposed of his fine rams of the Southdown breed for 2500f. each. One of them was purchased by the Emperor, and the other by Abbe Fissiaux, director of an agricultural colony near Marseilles. A bull of the pure Durham breed fetched 3200f. The bulls and cows shown by Prince Albert were bought by Princess Racciochi.

FOREIGN CORN TRADE.

The Flour Market at Paris, after a fall of two francs per sack, recovered a little tone on Thursday for parcels for future delivery, though not for those for immediate placement. The quotations for the four weeks closing at 93 francs. Wheat also was somewhat firmer. The last letters from Rouen describe prices generally for wheat and flour as having declined; but there was great confidence that this would not be for long and higher rates were again looked for. At Boulogne, Dieppe, Gray, and other places, the wheat was pressed into ear under favorable auspices. On the 14th at Marseilles, notwithstanding the heat and rain, the market was well supplied for wheat, but flour was dull. The [illegible] Frederica Paulina made flour up to 8[illegible].

Accounts from Algiers of the 14th [illegible] hard wheat ready [illegible] from the new harvest, four [illegible] was a trade at [illegible]. The [illegible] and hard wheat are expected to be plentiful, and of a fine quality, as well as Barley.

Accounts from Antwerp, of the 3d inst., note a calm in all grain, with only one sale of Rostock rye reported, at 21f. 18c. per 70 kilos.

At Lockeren and Cologne wheat was firm.

A rise in price is noted at Naples, as the consequence of bad weather, which it was feared would injure the growing crops; but generally they were looking well, as well as in Sicily, where markets were heavy.

From Tunis we are advised that Government was offering wheat at 23*a*25f. per hectolitre, without obtaining buyers.

Hambro' and Bremen describe the present calm, after much business at the former place, but it was the result of confident expectation of better prices. It was much the same in the markets of Amsterdam and Stettin. Fine weather has been experienced at Riga, which proved exceedingly beneficial to wheat and barley, both of which were dull, but rye was wanted for the interior.

From Dantzic we have dates to the 15th of June. The corn trade had received a check, owing to the unfavorable reports—prices had fallen from 2s.*a*4s. There was, however, but very little offering, on account of the moderate stock on hand; and further, as holders preferred waiting for higher rates.

Alexandria advices describe little doing, the old stocks being pretty nearly exhausted, though there were some few arrivals from Rosetta, and Saidi wheat has been placed at 43s. 5d. Contracts were also made for delivery of the new crop, in October and November, at 35s. 6d.*a*38s. 9d. Barley was in demand for the Crimea at 27s. 6d. Indian corn much sought, for immediate shipment, 31s. being offered.—*Mark Lane Ex.*

Spare the Birds!—Birds and Insects.

WILSON Flagg, in a late number of Hovey's Magazine, makes five classes of insects, and as many of birds, acting as natural checks upon the increase of insects:

The swallows are the natural enemies of the swarming insects, living almost entirely upon the wing. The common martin devours great quantities of wasps, beetles and goldsmiths. A single bird will devour [illegible] in a week. The moral of this is, that the husbandman should cultivate the society of swallows and martins about his lands and out buildings.

The sparrows and wrens feed upon the crawling insects that lurk within the buds, foliage and flowers of plants. The wrens are pugnacious, and a little box in a cherry tree will soon be appropriated by them, and they will drive away other birds that feed upon the fruit, a hint that cherry growers should remember this spring, and act upon.

The thrushes, blue-birds, jays and crows prey upon butterflies, grasshoppers, crickets, locusts and the larger beetles. A single family of jays will consume 20,000 of these in a season of three months.

The woodpeckers are armed with a stout, long bill, to penetrate the wood of trees, where the borers deposit their larvæ. They live almost entirely upon these worms.

OUR FARMERS, THE WHEAT CROP, ETC.—The Pioneer and Democrat, of Olympia, Washington Territory, August 17, noticing that the farmers of that portion of the territory had well nigh finished harvesting, says that from all accounts the crop will be an abundant one. It continues: How much depends upon the wheat crop; it is indeed the crop of crops. Other crops may fail. Our climate may forbid the growing of corn; or the potato may be thrown [illegible] with a consuming rot; buckwheat may prove a [illegible] wheat cake for breakfast; not a kernel of [illegible] rye may be raised, and the appearance of a great famine is not apprehended; but let the wheat be cut off—let it fail a grain to the [illegible] which it is not exempt from the time of sowing [illegible] the moment the threshed grain [illegible] every [illegible] and [illegible] of people [illegible] and every [illegible] would [illegible] into his wheat [illegible] [illegible] [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, SEPTEMBER 14, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always he found at REDDING & Co.'s, State street, Boston.

THE FESTIVAL TOURNAMENT.

SPECIAL NOTICE.

LADIES desirous of competing for the prizes offered by the Agricultual Society, to Lady Equestrians, will apply to either member of the undersigned Committee which has been selected for the approval of snch applications; and no lady will be permitted to contend for the proposed prizes, without the approhation of said Committee—to wit:

JOHN BIGLER.	Sacramento.	GEN. J. E. WOOL,	Benecia.
JAS. L. ENGLISH,	"	C. H. HEDGES,	Marysville.
C. UPSON,	"	R. CHENERY,	San Francisco
S. A. McMEANS,	"	A. J. WATSON,	San Jose,
W. C. WATERS,	"		

By order of the Executive Committee.

C. I. HUTCHINSON, Pres't.

NOTICE.

STATE AGRICULTURAL SOCIETYS' ROOMS, Sacramento, Sept. 25, 1855.

THE proprietors of the *Ferry* between Sacramento and Washington, have very generously tendered the *free* use of the same, to and fro, for the conveyance of Stock, and necessary attendonts, designed for Exhibition at the *State Fair*. Any articles intended to be exhibited will also be conveyed free of charge.

By order of the Executive Committee.

C. I. HUTCHINSON, Pres't.

Delegate, etc., of the State Society.

STATE AGRICULTURAL SOCIETY'S ROOMS, Sacramento, Sept. 12, 1855.

AT a meeting of the Executive Committee of the California State Agricultural Society held this day, it was, on motiun of Mr. Warren,

Resolved, That J. Q. A. Warren be the authorized Delegate of this Society in the Eastern States, to attend the Fairs and to solicit exchanges and reports of these various Societies, and to ask their kind aid and co-operation in making our Society known. Donations for the Library, or contributions of any kind, through the above source, will be thankfully received.

Resolved, That the thanks of this Society be transmitted to the Pennsylvania State Agricultural Society for their (First Annual Report) Report of the Transactions of their Society for 1854.

Also, to Jonathan Thorne, Esq., of Thorndale, (Duchess Co., N. Y.,) for colored plates of his celebrated stock — short-borned Bull "Grand Duke," purchased in England, for 1,000 guineas; and his short-horned Cow "Duchess," purchased in England, for 600 guineas.

Also, to R. D. [illegible] Agricultural Society, for Transactions of their Society in past years.

O. C. WHEELER, Rec. Sec.

SPECIAL PREMIUMS.

A Grand Festival Tournament.

The funds for those premiums are from private sources. No competitor will be allowed to enter the list without a card from a committee competent, to secure ladies from improper association.

LADIES IN SADDLE.

To the most accomplished Lady Rider, a Gold Watch and Chain	$100
Second best, a Saddle	50
Third do a Silver Cup	25
Fourth do a Riding Whip	10

GENTLEMEN IN SADDLE.

The most skillful Gentleman Rider, Silver Plate	$50
Second best do do do	25

SKILL WITH THE LASSO.

The most accomplished feats of Horsemanship with the Lasso, a Silver Cup	$50
Second best, a Cup	25

INDIAN SPORTS.

The most expert and skillful sports of the Indian, with bow and arrow—First Prize	$20
Second Prize	10

SUPPLEMENTAL.

Premiums will be awarded to Trotting and Pacing Horses produced on Exhibition days; also, to Roadsters, spans and single, and Horses under the saddle, as follows:

Best Trotting Horse	$50
2d do do	30
3d do do	20
Best Pacing Horse	50
2d do do	30
3d do do	20
Best span of Roadsters, in harness, Silver Cup, value	30
2d do do Silver Cup or Plate, value	20
Best single Horse in harness, do do do	20
2d do do do do do do	15
Best saddle Horse exhibited, plate	20

CERTIFICATES AND BADGES OF MEMBERS.—Those who desire to become members of the State Society and to take part in the coming State Fair, all who are competitors, and all who desire to aid and forward this enterprise, are invited to call or send to the Society's Rooms, and take their tickets and badges. This will enable the Executive to carry on their work promptly.

Momberships, $10; admitting gentleman and lady members of his family to the exhibitions of the season. Tickets and badges now ready.

OUR readers will please see the new advertisements of the Alameda Nursery, Diseases of Fowls, Atkins' Self-raking Reaper, and others, all important, and of which we shall hereafter speak.

"The Bread of Life."

THAT bread is the "staff of life," has been too long an established fact to permit of a question now, and when danger approaches this sensitive chord, the whole body domestic is affected. It is with this view, feeling that every information we can impart, every aid we can offer, by which the citizens of our State may he fully apprised of the condition of this great staple, that we look to its movements as of the highest importance.

California is destined to be a great Grain growing country, and she will need to know not only the true condition of her own granaries and markets and those of the great marts of our older States, but of all Europe; for as years advance, means of communication will be much more rapid, and we shall be competitors in every market where the "Stars and Stripes" are known.

For these reasons, we shall endeavor to present at the proper time the true condition of our own markets, our stocks on hand, and the present and prospective value of Grain—and we are making arrangements to do this most effectually. Our exchanges, which are now numerous, will afford us an opportunity unequalled, to do this, and the increasing communiations we have from private sources, will enable us to present, from time to time, important statistics.

We present this week the condition of the Foreign markets. Our Liverpool dates are to July 30, and those from Paris to July 20. These reports are made, in part, up to June 30, at Liverpool, and June 20, at Paris. From these tables, estimates can be made of the amount shipped weekly, and the amounts of the past year's shipment will be some guide for the demand of the present; and however large the crop may be East, by a reference to the tables of Grain imported into Great Britain, and the sources whence received, it will be perceived that in 1854, England received from Russia and Prussia 1,179,781 quarters, or 9,438,248 bushels, nearly *ten millions of bushels of wheat*. The same period of time England received from the United States 417,607 quarters, or 3,340,856 bushels only. In the present condition of Europe, we ask from whence is this amount, heretofore from Russia and Prussia, to be received?

We place before our readers the opinions of the press there, as they prevail, yet we know large orders for grain are in the American Market, from France, and the shipments are being made now, in all confidence, to Liverpool. The consumption of Breadstuffs by the armies in the Crimea must be immense, and while the war presents the present prospect, that demand cannot cease.

The news by the steamer arriving Wednesday, brings Liverpool dates to July 30, with quotations of Breadstuffs, as follows: White wheat 11s. 9d. to 12s. 9d. per bushel, equal to $2 94 to $3 12; Ohio Flour 43s. to 44s. or $10 75 to 11; Corn 38s. to 38s. 6d. per quarter, or equal to $1 18 to $1 20 per bushel, and this too with a dull market. New York market reports of Aug. 20 quote New York and Western Flour without change, Southern Flour $9 50 per barrel, and Southern White Wheat $1 62 to I 92 per bushel, equal to nearly 3 1-2c. per pound.

These are some of the true phases of the Great Grain Markets that affect now and must always affect the value of and demand for the Grain crop of California. We shall take additional pains to keep our readers advised of these matters, leaving them to act as they thiuk circumstances demand. Our main object is to have the *Grain Grower himself* receive the *benefit* of his labor.

We annex the following important data, kindly forwarded to us in the circular of Messrs. Geo. E. Pope & Co., from which we extract. This presents our own markets, and thus we have before our readers a general view of the "Staff of Life":

In no section of our state have the crops entirely escaped the blighting influence of rust, the injury from which, we fear, is much greater than is generally supposed. The light receipts of Grain thus far [August 29], we attribute, in part, to the fact, that our Farmers have been wholly occupied in harvesting and threshing; but the principal cause, is the opinion which prevails with the majority, that prices must materially advance when the Fall trade shall have commenced, as also in their increased ability to hold their crops. The extensive exportation of Grain and Flour during the last four months, has so far reduced the stock which had accumulated in the warehouses of San Francisco, as to warrant the hops of a healthier tone in our market during the season upon which we are just entering. Shipments continue to be made, and should low rates prevail, the markets will find further relief. In estimating the effect upon our market of the large production of Wheat, it must be borne in mind that a considerable portion of the crop is of a quality so interior as to be fit only for distilling, and that the quantity required for seed will still further reduce the amount available for Flouring purposes.

FLOUR.—At the commencement of the month, was under the influence of a speculative movement, which resulted in an advance of prices for Domestic to $8@9, and caused purchasers to withdraw from the market. After several days of entire inactivity, holders consented to a material reduction in prices, and near the close, large sales have been made at $6@6 75.

WHEAT.—of good quality has been in fair demand for milling purposes, but a large portion of the receipts for the current month has been of inferior quality, being much shrunk and badly cleaned. We would advise greater care in cleaning and preparing this Grain for market, as the presence of foul seeds, which can be easily separated, often causes a reduction in price of fifteen to twenty five per cent. The receipts during the month sum up 41,504 sacks, of which about 4,000 sacks have been ordered into store to await higher prices. We note sales of 39,480 sacks at 2½@1½.

BARLEY.—We note an active demand for this article through most of the month, receipts having been generally taken up on arrival at prices ranging from $1 70 to $1 75 ₱ 100 lbs. At the close the market is firm, at $1 55, with an upward tendency. Receipts of Domestic for the month, 52,682 sacks.

OATS.—The demand for Domestic has been light through the month. We note sales of 20,000 sacks Domestic at 2c@ 1⅝ at the close, with a slightly increased demand. Receipts of Domestic have been 23,250 sacks.

POTATOES—have been in active demand through the entire month, receipts being mostly taken up immediately on arrival; sales 29,100 sacks, ranging at 2c to 1¼, closing at 1½ with but few on hand. A decided opinion prevails that the crop, compared with last year, will be small. Receipts 30,726 sacks. [Potatoes now readily command 3c at the Bay.]

Table of Imports and Exports from Jan. 1st, 1855, to Aug. 29th.

	Imports.	Exports.		Imports.	Exports.
Flour	42,014	49,005 bbls	Wheat		80,784 sacks
Barley	8,840	84,589 sacks	Oats		26,917 sacks

Where shall the Next State Fair be Held?

THE most appropriate time to agitate this question is the present, and the best time to decide it is during the coming Exhibition, when we can have the voice, will and interest, of those who are to be affected, present at the gathering. It is customary to have the Annual Meeting of the Society holden during the Fair, and as the act of incoporation fixes that election, the question should now be presented to all who feel an interest in this important matter.

It is to he hoped that large delegations will come up from every section of the State and manifest an interest in the matter, for there is but one way to decide the question. Wherever the greatest zeal for the cause of Agriculture is found—wherever the citizens manifest by their *action* the present year, by bringing forward evidences of that interest and by their personal efforts making known by the most reliable proof that the mass of the people will receive the most benefit, there will the Fair be held. We have heretofore spoken upon this subject, and we now call the attention of the citizens of the various localities that have been named to this matter—they are interested in this matter, and deeply so, and if they desire that the State Fair of 1856 shall centre with them, then "actions will speak louder than words."

The exhibitions of the present year bid fair to be of more than usual extent, interest and splendor. The benefits arising from such exhibitions are being better appreciated and their influence for good more widely felt, and it cannot be doubt that it is of the highest moment that the very best locality should be selected each year for our Exhibitions. The most eligible points which have been named for the Fair of '56, are, Marysville, San Jose, Stockton, and Benicia. To each of these points there is communication by steamers; each has advantages; each would strive for the prize. Marysville is already in the field by her memorial and her appointed delegates, and she is determined to win. San Jose, with becoming spirit and energy, is buckling on the armor, intending to come up well prepared with the produce of her Great Valley and contend for the prize; she will pour out streams of argument for her cause like to the continuous streams of her own ever-flowing Artesians. Stockton has not yet spoken, but it cannot be expected that she will see other cities outstrip her in the race. Stockton has many advantages, and will most assuredly come up to the Fair and by her skill and genius make herself known. Benicia, though "quiet now," may send from the valleys near by a voice that shall come thundering from her batteries and make herself heard and known.

We shall have acquitted ourself of duty if we but awaken those most interested to theirs, in this great work. In an enterprise of this kind we have no local partialities. "The greatest good of the greatest possible number" is our object and aim, and we most sincerely trust the citizens of each point we have named will act earnestly and promptly. We would suggest that meetings be called in each of these localities, and proper committees and delegates appointed to act upon all matters relative thereto. The final decision of this question will be made at the Annual Meeting of the Society, and every section of the State should be fully represented then.

We cannot close this article without calling upon every local Agricultural Society, every city, town, and village, to choose special committees to attend this Fair and take active part therein.

TO MANUFACTURERS.—The Manufacturers of California are invited to examine the List of Premiums offered by the California State Agricultural Society the present year. It is important for them to know that such prizes are offered, and it must be of great utility to them and beneficial to the whole State to exhibit their various articles manufactured. It is hoped that every manufacturer will take an interest and send specimens to the coming State Fair. See the large show bills and another part of this paper for full LISTS OF PRIZES.

Weekly Accounts of Fruits Exhibited AT THE SOCIETY'S ROOMS.

SEPTEMBER 8TH, the following fruits were exhibited at the Rooms of the State Agricultural Society in Sacramento, viz:

PEACHES.

One champagne basket full, numbering about 100, from the Pomological Gardens of A. P. Smith, Esq., comprising "Old Mixon Cling," and "Crawford's Late" (free stone). In order to ascertain the average, two were taken from the quantity promiscuously, and measured—No. 1, the largest, in circumference by the transverso diameter, 10 inches; No. 2, in circumference, by the transverse diameter, 7 inches. Average weight of the one hundred, 7 1-2 ounces. They met ready sale in the market, and brought the handsome sum of $48. This indefatigable Pomological and Horticulturist deserves golden opinions, from all sorts of men.

—From the Garden of Charles L. Ingoldsbe, Esq., "Crescent Valley," near Coloma—One basket of Peaches, Clingstone, and measured as follows, viz: No. 1, the largest, in circumference by the transverse diameter, 10 1-2 inches; No. 2, 10 inches; No. 3, 10 inches; No. 4, 9 5-8 inches; No. 5, 9 1-2 inches. Circumference of the long diameter was not taken, inasmuch as it corresponded, almost, with the transverse measurement. The fruit is of uniform size and remarkable beauty, in shape, rather round, but, artistically painted, a beautiful red color towards the sun, and on the opposite side *the harmony is still maintained, by the melting shade of the former.* The flesh is light salmon color, and the juice is rich and vinous. "Trees were set out in the spring of 1853. The above are from their second bearing." The producer deserves much credit for this splendid contribution.

—Two seedling Clingstone Peaches, trees grown from Chili pits, from the "Excelsior" Gardens and Nursery of Rev. O. C. Wheeler, Sacramento. Measurement of the largest, in circumference by the transverse diameter 8 3-4 inches. They are beautifully colored, red on the side next the sun, and on the opposite side, yellowish green; flesh very firm, rich, and sugary. These fine specimens are creditable to the untiring industry of the proprietor.

NECTARINE.

One "Scarlet Nectarine," from the Garden of T. O. Selby, Esq.,—freestone; measure, in circumference, by the transverse diameter 5 1-2 inches; fruit will improve by the next bearing season.

STRAWBERRIES.

Five baskets of Strawberries from the Garden L. Sanford, Esq., viz: One basket containing [illegible], the fruit are of medium size, and uniform shape, but slightly elongated; color red. One basket of "Burr's New Seedling"; medium size and uniform color, more elongated than the former, and lighter color. One basket of "Large Early Scarlet," medium size and uniform shape, color scarlet, and more elongated than either of the former. One basket of "Rival Hudson"; uniform shape and medium size, color crimson, and conical shape. This is a handsome array, of this delicious fruit, at this season of the year, and speaks well for the grower.

One large Yellow Squash, from the garden of J. Pillet, Esq., Sacramento—measure, in circumference, by the transverse diameter 5 feet, and weight 60 pounds.

The fine specimens which your committee report for publication this week, cannot be otherwise than gratifying to every California producer, but, the display is too small, considering the ability everywhere apparent to increase it. Send good samples of your products, and they will be reported.

B. B. BROWN,
Chm. Com. on Fruits.

COMMITTEE TO VISIT FARMS, GARDENS, NURSERIES, &c.—We take pleasure in seeing the work go on. The present week several committees are at their labors, pressing on their work: A committee erecting the pens for the stock, preparing rooms for the accommodation of the competitors at the Tournament and the ground for their feats, a committee for the Hall, and also several in the field traversing the several counties. We know the following gentlemen are out on duty: C. I. Hutchinson, Esq., Rev. A. H. Myers and Gen. Cahoon, upon Farms, &c.; Robt. Robinson, A. P. Smith, and J. C. Davis, Esqs., for Stock, &c.; and the Editor of the FARMER will meet the Agriculturists and citizens of San Joso, and join other committees, thus carrying forward the work. The committees will visit Yolo county, passing on through Sonoma, Napa and Suisun to Benicia, thence through Pacheco down to Alameda and Santa Clara. We hope the farmers will be ready to take active part and prepare to unite and make ready for the Fair. It is the design to meet the united committees on Saturday, at the city of San Jose.

Letter from Marysville.

MARYSVILLE, Sept. 10th, 1855.

Corres. Sec. of the State Agricultural Society:

DEAR SIR: Your favor of the 12th of last month, with the accompanying books and seeds, was duly received, for which, in behalf of our Society, accept many thanks. The seeds we shall endeavor to have distributed to such of the members of our Society as will give them that careful attention which the object of the experiment demands.

An increasing interest is felt upon the subject of Agriculture, and were it not for the all-absorbing topic of politics engrossing the minds and hearts of the community, we should find the work progressing with a rapidity equal to the high hopes we have cherished.

The CALIFORNIA FARMER is doing its mission of good in making up the minds of our farmers to the subject of a scientific culture of the land; and the question is daily asked, what shall we do to make our crops yield us the reward of our labor. Our next meeting, which is to be held at Yuba City, the third Monday of this month, will be one of great interest, and we feel sure will tell well for our youthful Society. You may expect to see us handsomely represented at the State Fair.

Some of our stock raisers intend to do us credit by showing some of the finest stock in the country. Our flouring mills will, some of them, send specimens of No. 1 California flour and corn meal. Different branches of industry will be represented by our citizens, and I trust will add something to the attraction of the grand display.

I will endeavor (so far as lays in my power,) to apprise you in season, of any articles which may be presented for exhibition.

In behalf of the Society, I remain yours, &c.,

H. M. HASKELL,
Corres. Sec. of the Yuba and Sutter Ag. Society.

Agricultural Meeting.

WE copy the following from the Marysville Express, and rejoice that so lively an interest is felt. We trust a large attendance will give additional strength to the work:

An adjourned meeting of the Yuba and Sutter Agricultural Society will be held at Brown's Hotel, in Yuba City, on Monday evening next, the 17th inst. This being the last meeting previous to the State Fair, it is important that a general attendance should be had. Agriculturists and citizens generally would do well to bear in mind, that at the last meeting three committees were appointed, namely: on Agriculture, Horticulture and Stock. The editor of this paper is chairman of the Committee on Agriculture, Gen. Allen of the Herald, on Horticulture, and Chas. H. Hedges, on Stock. These committees are expected to report at the meeting on Monday evening next, and to enable them so to do, it will be necessary for our citizens to communicate with them. On the part and in behalf of the Committee on Agriculture, we would most respectfully request our agricultural friends to fortify us with all the information in their power previous to the meeting, so that we shall be enabled to furnish a report that will be satisfactory to the Society.

The fact that it is contemplated to hold the next Annual Fair in this city, should arouse our citizens to every exertion in their power, in order to be well represented. Our county ranks high among the agricultural counties of the State, and should take her appropriate position, which she will not fail to do, if the proper energy is used. We shall hope to hear from our friends upon the important subject under contemplation.

TO OUR CORRESPONDENTS, READERS AND FRIENDS.—We are obliged to present in this week's issue the full lists of premiums and other calls for the coming Fair, which are of so much importance, that we are compelled still to keep back articles that have been unavoidably deferred before. We have on file, letters just received from the Coast Range, by Dr. C. F. Winslow, which will be read with deep interest; MSS. from Miss Fortune, from Alice, and from Eastern correspondents, of much interest, and shall endeavor to put them in print as fast as possible. We have in our portfolio many sketches of farms, gardens, nurseries, orchards, fine stock, &c., all to appear soon. Our good friends at Napa, and the fine nurseries and gardens at San Jose that we glanced at last week, and shall again visit this week, will all be duly remembered and recorded. We would call attention to the premiums and notices of the State Fair as the one great thing now in view. *Everybody must come and see it.* We ask attention to the letter of our Boston correspondent, to the article on the Apple Tree Borer and Sunblight, by Dr. Strentzel, an experienced hand; Where shall the next State Fair be? and other matters. We shall endeavor to make our journal an important document to forward to the East, by publishing all the Reports of the Fair, and giving everything in full.

WE return thanks to Mr. J. Bithell, Bookstore No. 102 J street, for a liberal supply of Eastern papers, pictorials, &c., received by the steamer Golden Age. Papers from all parts of the States, as well as foreign, may be obtained at the store of Mr. Bithell, which is well worthy of a visit.

THE QUINTAY RANCH, MARYSVILLE.—While on our tour through Yuba county, we visited this fine Ranch, situated upon the banks of the Yuba. The principal portion of it is annually overflowed and a rich deposit of several inches is left upon the land, thus enriching it and preparing it for the most luxuriant crops. It will be recollected that recently superior Melons were exhibited at the Society's rooms from this ranch; also Peaches of extraordinary beauty, and other fine products. While at this place, we noticed a very luxuriant and beautiful hedge, around a portion of the garden, of the Pomegranate (Pome Grenada), then full of its rich scarlet flowers and green fruit (July), and we were then convinced that this luscious fruit shrub would be one of the finest hedge plants in this country. We saw many fine and curious vegetables, and plants and fruits, for which the proprietors are celebrated, rarely cultivating aught but new and rare varieties. The 'Carne de perro," of which we were speaking (the Pomegranate) grows in South America so abundantly that it is very difficult to destroy. This induces us to recommend it as a hedge plant. Its rich foliage, crimson flowers and luscious fruit make it altogether beautiful. Capt. Pinnix, under whose eyes everything prospers so well, showed us the new Japan Bean, which has since been sent to the Society's Room's and is now on exhibition—the pods often being two and a-half to five feet long. The new Evergreen Corn, a most valuable variety, and several new Melons and luscious Peaches were all of high character. Upon this ranch we saw large fields of the "Alfalfa," or Peruvian Clover (trifolium Peruvianum), and there upon the lands surrounding, we saw fields of green clover, looking and yielding well. We were kindly entertained and spent a pleasant time. From this place we anticipate much at the Fair.

STOCK FOR EXHIBITION AT THE FAIR.—We are most happy to announce that already the State Society have received notice and entries of a large number of the very finest animals of every class, that will be present to compete for the Annual Show on the 25th inst. Notices have reached the Secretary's Office, from Sutter, Butte, Yuba, and Upper Sacramento, from Yolo county and Cache Creek, from Napa, Sonoma, Solano, Marin, Alameda, San Joso and San Francisco counties, and from many sections in each. The boasted specimens of each county will come. We have mentioned the famous "Black Hawk" [illegible] Hill," and several well known trotters. This week we have received a notice of the famed "General Taylor," now entered as a competitor. This splendid animal trotted over the Pioneer Course, last year, in 2.46, for a purse which he easily won, and the owner then offered a challenge of a high character, but found no match. We learn that the same challenge is open still, and this will give all who have fast horses a chance to test their speed and bottom. We are advised that the General Taylor stands unsurpassed for beauty and speed; but this question will undoubtedly be settled at the Fair. Persons who have fine stock for sale, or exhibition only, will do well to have it present.

THE PRESS.—We would express the pleasure we feel in seeing the laudable interest the Press is taking to make known through their columns the coming State Fair. We shall endeavor to make record of every paper in the State that evince a generous interest in this great enterprise. We have noticed lately handsome editorials in the Golden Era, Evening Journal, Chronicle, Citizen, and Alta, San Francisco—the Herald and Express Marysville—the Union, State Journal, and Tribune, of this city, have manifested a lively interest, an interest most creditable to them and we wish to make record of all. If those journals that have made, or may make notices, will have the kindness to send us marked copies, we shall be much obliged. We desire to preserve them as permanent records of Agriculture for the future.

GRANARIES AND TREASURES.—About a year since we spoke of a large Granary that was erecting at Napa City and the value it would be to the grain growers of that section. We visited it this season, and learned with pleasure the benefits it has thus conferred. This building was erected by Messrs. Kelsey & Lawley and proved a good income last year to them, as well as beneficial to others. The building will hold *three thousand tons*, is a capital building, and reflects credit upon the builders. Farmers always find it a safe place to store grain and always a ready market. The business is conducted upon a liberal, and prompt basis by Messrs. Lawley & Co., of whom we can speak in high terms. Such buildings are the best Treasuries of the State—they "feed the hungry."

Our Boston Correspondence.

LETTER NO. 3.

BOSTON, July 21, 1855.

EDITORS FARMER: The accounts from all parts of the country in regard to the crops, are very promising, and it is a cause for general rejoicing, as it will have a most beneficial effect upon all branches of business. Never for years has there been such enormous prices paid for all kinds of provisions, as the year past; and now the tide must turn, and everything will be low enough this fall.

The potato crop in New York State will be greater than ever before. One large grower says that potatoes will sell in the city at 25 cts. a bushel, this fall. In Jefferson county, one farmer has 70 acres growing finely. He does not expect they will be over 12 or 16 cents a bushel. In Chicago and through the State of Illinois the large fields of potatoes are noticeable, and promise a great yield. Farmers can afford to feed their pigs upon potatoes this year, they will be so low and plenty.

Flour fell 37 cents last week at Baltimore, and wheat 75 cents. New flour has come to market, and the receipts of wheat are very heavy. At Philadelphia wheat declined 70 cents a bushel, causing almost a panic. Flour commands scarcely $7 at Cincinnati, and new wheat brings but $1 20.

Until within a dozen years, large establishments for the grinding of wheat into flour, have been a novelty in this section of country. When the first establishment of the kind was started in this city, much doubt was expressed as to the probabilty of its success, without the water power so common at the West. The doubt has been satisfactory settled, and wheat ground here now finds a market over the whole world. Other mills have been started in various parts of the country, and with good success. Certain public spirited citizens of Newburyport have been contemplating the starting of a mill in that city. A good location has been obtained near deep water, with necessary buildings, and plenty of fresh water, at small expense; and there is no reason why the project should not result in great benefit to all. One half of the capital has already been subscribed, and the remainder can soon be obtained. Some of the first names are mentioned as engaged in the enterprise.

Correspondence from Cincinnati states that there is not a single failure among the grains or fruits. All wild fruits and berries are plenteous. The orchards, vineyards and gardens are prodigal of fruits and vegetables. The meadows and clover fields are rich with sweet grass and luxuriant blossoms, and the potato patches are mines of food. The corn overtops the fences, oats are ready for the harvester, and the thick shocks standing in the wheat fields, show the fatness of the land. The barns are groaning under the weight. The farmers will be rich with the proceeds of their great harvest. Their pockets will be full of the needful, while their produce goes to the mills and to the cities, thus adding hundreds of millions to the wealth of the country. Surely the *good times* are coming at last.

In Charleston, S. C., the markets present the unusual feature of a large foreign exportation of wheat; one single house having received notice of consignments to the amount of 200,000 bushels. The exports have been for the past mostly to northern ports, but now arrangements have been effected for shipments to Europe, when the superior quality of southern grain will make it a favorite.

The managers of the American Institute in New York have secured the Crystal Palace in which they will hold their 27th Annual Fair in October. This spacious building will afford unusual facilities for the arrangement and display of the various specimens of art, and the productions of nature. Steam power will be provided to put in operation machinery of all description, and the managers pledge themselves to make every exertion in their power for the accommodation of visitors, and for such arrangements as will secure the great ends of the exhibition.

The literary intelligence will be found quite interesting. The new books now in press for the fall trade are superior to any ever offered to the public.

Messrs. Leavitt & Brown are preparing volumes for the press, [illegible] the Naval History of the United States by Lieut. Maury. The work will be issued in various [illegible] and will contain about 600 pages and at least [illegible] Orders will be received by booksellers and [illegible] will be supplied as fast as they can be printed. This great work is expected to stir the *waters to a foam*, both here and in Europe, and is to be published on Monday, August 6.

I send you the above announcements of Books, for the autumn of 1855, by the spirited publishers of New York, as there are many who will be glad to see what is coming in the way of intellectual treat, and to give them an opportunity to send for what they desire in season. I shall give you in my next, further announcements, as this fall promises to be a brilliant season for the publishers, the splendid harvest having had a most beneficial effect upon trade, and many valuable books will make their appearance.

The Massachusetts Horticultural Society have secured the Boston Music Hall for the next annual exhibition of fruits, flowers, floral decorations and vegetables, which will open on Tuesday, the 18th of Sept. It is a superb hall for the display of the rich products of field and garden, and the exhibition will undoubtedly be one of the best ever given by this pioneer society.

My next letter will contain later news of the crops from the South and West, from *our own correspondent*.

DE QUINCEY.

THANKS—To Messrs. Wells Fargo & Co.'s Express, through their prompt and attentive messengers, for acts of courtesy too numerous to particularize, in the prompt delivery of letters, packages and papers, over lines in the State and by steamers from the East.

The polite messengers of the Pacific Express Company have also laid us under obligations by their prompt delivery of letters and papers, and if we do not always render them the acknowledgments, it not because they are [illegible] We could hardly dispense with the services of these enterprising Expresses.

FLAT TAILED SHEEP.—While in Napa county we visited the fine ranch of J. M. Hamilton, Esq., to examine the stock of the Flat Tailed sheep which he has, we saw the flock of [illegible] sheep, and were astonished at the [illegible] having as a general thing, four or five lambs at a time. These sheep will become valuable. Mr. Hamilton will be at the Fair with some of the stock.

AGRICULTURAL AND HORTICULTURAL FAIR;

Cattle Show and Industrial Exhibition,

OF THE

CALIFORNIA State Agricultural Society,

TO BE HOLDEN AT

Sacramento City, Sept. 25, 26, 27, and 28.

PREMIUMS OFFERED FOR 1855.

The following section from the Act of Incorporation, by the Legislature, is the basis for the premiums announced below:

"SEC. 8. There is hereby appropriated from any money in the Treasury not otherwise appropriated, the sum of Five Thousand Dollars annually, for the space of four years, to be paid in September each year, to the Treasurer of said Society, on a requisition of the Treasurer of this State, signed by the President and Recording Secretary of said Society, which sum shall be used only for the purpose of paying premiums, and for no other purpose whatsoever."

FARMS, VINEYARDS, ORCHARDS, ETC.

Competitors for premiums in this department are requested to give *immediate* notice of their intention, to the President or Corresponding Secretary, that the committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the committee unless received before the first day of August.

It is of especial importance to Grain Growers that they bear the above in mind.

Best improved Farm	$200
2d do do	100
Best Vineyard	75
2d do	50
Best Nursery	75

Best pair of Ducks	10

[☞ See *Special Premiums* in another column.]

Discretionary premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of premiums.

Each Committee is authorized to recommend special premiums upon objects that properly belong to the class assigned to them.

The managers of the Society will be present during the Fair to give directions to all who may wish to enter animals or any articles for premium or exhibition, and forage will be furnished gratis for all animals entered for premiums.

The Society earnestly desire to be informed, at the earliest possible moment, how far the different Farmers in the State can co-operate in this undertaking, and what specimens they intend to exhibit,—so that suitable provision may be made for their contributions.

All communications upon the subject, will be promptly responded to, and all information cheerfully rendered.

The announcement of the awards, together with appropriate exercises, will take place on the last day of the Fair.

Address the President or the Corresponding Secretary, at Sacramento.

Rules and Regulations of the Fair.

1. All members of the California State Agricultural Society will be furnished with a badge of membership, upon payment of the membership fee of $10, and will be required to wear the same during the Fair. This badge will admit the ladies of his family and children under 15 years of age.

2 Members of the Society and their families alone will be admitted on Tuesday, the day for examination and awards by the judges. All competitors are expected to be present. The public will be admitted on and after Wednesday, at 10 o'clock. Price of admission, $1 00. Children and Servants, fifty cents. Clergymen, Editors and Pupils of Charitable Institutions admitted free.

3. Agricultural Societies and Institutions from other States, are invited to send Delegates. Such Delegates will be presented with a complimentary card.

4. All Exhibitors who intend to compete for the Premiums of the Society, must become members of the same, and have their articles on the ground and entered at the Secretary's Office, in Reception Hall, at or before 5 o'clock on Monday evening, Sept. 24th, without fail, so that they may be arranged in their respective departments, and in readiness for examination by the Judges on Tuesday, at 10, A. M.

5. The regulations of the Society must be strictly observed by exhibitors, otherwise the Society will not be responsible for the omission of any article or animal not entered under the rules.

6. No article or animal entered for a premium, can be removed or taken away without special permission, before the close of the Exhibition. No premium will be paid on articles or animals removed in violation of this rule.

7. All articles and animals entered for exhibition, must have cards attached with the number as entered at the Secretary's Office; and exhibitors in all cases must obtain their cards previous to placing their articles or animals on the Fair grounds.

8. Those who wish to offer animals or articles for sale during the Fair, must notify the Secretary of such intention at the time of entry.

9. The Executive Committee will use every precaution in their power for the safe preservation of all articles and stock on exhibition. Exhibitors must give attention to their articles or animals during the Fair, and at the close of the Exhibition attend to their removal.

10. The Awarding Committees or Judges selected for the next Fair, are earnestly requested to report themselves to the Chairman of the Executive Committee at Society's Rooms, on Tuesday morning, the 24th of September.

11. In no case can the Judges award special or discretionary premiums; but will commend to the Executive Committee any articles in their class which they may deem worthy of special notice and for which a premium has not been offered.

12. The Judges on animals, will have regard to the symmetry, early maturing, thorough breeding, and characteristics of the breeds which they judge. They will make proper allowances for the age, feeding and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

13. No stock of inferior quality will be admitted within the grounds; a committee will be appointed to rule out all below a medium grade.

14. Animals to whom premiums have been awarded, must be paraded around the track, that visitors may see the prize animals.

15. No person will be allowed to interfere with their Judges during their adjudications.

16. The several Superintending Committees will give particular direction to all articles in their departments, and see that all are arranged in the best order possible to lessen and facilitate the labors of the Judges in their examination.

17. The Superintendents will attend each set of Judges in their respective departments and point out the different articles of animals to be examined; will attach prize cards to the articles, or flags to the successful animals after the Judges' reports have been made up and delivered to the Chairman of the Executive Committee.

18. The Judges will withhold premiums on animals or articles in their opinion not worthy, though there be no competition.

19. Animals having received premiums of the Society at previous exhibitions will not be allowed to compete for prizes again in the same class.

20. The Chief Marshall, with efficient aids, will be in attendance during the hours of exhibition to keep proper order.

21. No exhibitor will be permitted to enter more than one animal in each of the sub-classes.

22. Animals, when duly entered, are well provided for by the Society, without charge to owner, and cannot be removed, except by permission of the Executive Committee.

23. All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignors, to, or for whom, only, premiums for such articles will be awarded.

24. Every machine or implement offered for a premium, must be so designed or described, as will serve to identify it to future purchasers, and also the selling price of the article must be stated and marked on the labels, and in the published reports of premium articles.

25. Efficiency, cheapness and durability will be regarded as chief excellences in every machine or implement.

26. The Chief Marshal will call the Judges at at 10 o'clock on Tuesday morning—assemble them at the Secretary's rooms—furnish them with blank books in which to register their awards, and have the Judges conducted by the Assistant Marshals, to their respective departments of the Exhibition.

27. The Marshal and his Aids shall give particular attention to the proper arrangement of all articles exhibited, in their respective departments; point out the articles or animals to the Judges, and otherwise facilitate the examination by the Judges.

Horticultural Department.

[For the California Farmer.]

Apple Tree Borer and Sun Blight.

ALHAMBRA VALLEY, Martinez, Sept. 4, 1855.

EDITORS FARMER: Your request to Orchardists and Gardeners in the last number of the FARMER, respecting the Apple Tree Borer and Sun Blight, induces me to, sketch my experience in the matter as based upon my personal observation, which may tend to multiply facts suggestive of a general remedy for avoiding the above named pests.

I have observed the "Sun blight near the surface of the ground" on apple, quince, and peach trees, and it appeared to me to result from, either deficient tillage, the soil being clody and baked, or, if the ground was loose, deficiency in moisture; in each case not supplying sufficient nourishment to the plant. I have had quince trees, so afflicted, cut down below the blighted part, and they started a new thrifty growth.

The Borer infesting my trees is certainly indigenous to this country, and in its habits and form is somewhat different from the Apple Tree Borer in the Southern States, being of a brighter yellow color, with a larger head, and of a greater length of body; it operates here upon the quince, peach, plum, and the apple, apparently making choice of the apple tree, effecting a lodgment two or three inches above ground on the south side of a tree, on young trees selecting the point of insertion of a bud or graft, on the *old* stem, to begin the operation of girding the tree and eventually taking up quarters in the pith.

In the months of July and August they do the most damage. To check their depradations, will require a careful examination of the growing trees, when by a disfiguration, a dark blotch on the bark or a small quantity of wood dust, they can be detected; in such a case the decayed part to be scraped off, until the intruder is laid open. Very often there are several grubs on one tree. If the bark was not completely girded, the stem can be yet preserved by covering the wound with grafting wax, and drawing up the earth round the stem.

The preventive remedy of heaping lime, ashes or soil, round the stem to form a mound, is very convenient and mostly effectual for large trees, but young and also high standard trees will be more effectually secured, by wrapping up the stems, loosely, with any old clothes and even paper will answer. This will not only exclude the Borer, but will also save the trees from Sun Blight, not only close to the ground, but also of the whole stem. Caution is required to bind up loosely to avoid any injury to the growing stem.

Yours respectfully, DR. P. STRENTZEL.

A New Fact in Grafting.

THE better process generally for working cherries and plums, is to bud or inoculate at the proper season; but it often happens that it is desirable to work trees too old, or the season so dry that the bark will not slip, and the budding process cannot be performed, in which case grafting becomes important.

The grafting of the cherry is quite an uncertain operation, and never succeeds well except when,

performed early in the spring, and the scions, which are difficult to keep, are fresh and in good order. the bark is so liable to discolor, and the wood to shrivel, which is absolutely fatal to its vitality. The same trouble applies to the plum in a less degree. Individuals, not nurserymen, are apt to neglect cutting their scions in proper time, and are only sensible of the oversight when they observe the objects they wish to alter at the opening of spring, when it is too late.

The new process to which I allude, is a means whereby a scion of any kind may be cut from a tree after the buds are fully expanded, but not opened, and grafted the same minute, and which almost invariably succeeds, if properly executed. In this process I prefer the terminal point of a limb for the scion, or any part may be used by cutting the wood close to the upper bud, and dipping it twice, with two or three minutes' interval, into a vial containing a small quantity of *collodion* or *artificial cuticle*, which can be procured of any apothecary. It instantly forms an air-tight coating, both flexible and elastic, and protects it from dying and losing its vitality.

There is no time of year, when the new buds are sufficiently formed and the stock in a growing state, but what grafting by this process may be performed, in which case have but one bud on the scion, and dip the whole wood, except the wedge, in the *collodion*, to protect it from the drying sun and heat of summer. It sometimes happens that one has a single choice exotic, difficult to procure, that it is important not to fail in grafting, and this method almost infallibly insures success.

Miscellany.

THE FRIGATE BIRD.

BY OSCAR G. HUGHAN.

Bird, of plumage rich and rare,
I would soar with thee in air;
Through the broad expanse of blue,
Purer visions I would view.
Far from scenes where mortals weep,
On thy pinions I would sweep;
Gaily o'er the sparkling wave,
Where thy pinions thou dost lave.
Lend, O lend me, then, thy wing,
Lonely wanderer, airy king!
Let me now my flight begin,
I would flee the earth's loud din.
Man has made this world, once fair,
The birthplace of unceasing care;
Hearts 'gainst hearts, till life is o'er,
Wage a dark, relentless war;
And when death has kindly freed
A heart that lived alone to bleed,
Buried 'neath the sod 'twill lie,
Perished e'en from memory.
Far from earth's conflicting thrall,
I would live, if live at all;
Give, O give me, then, thy wing,
Lonely wanderer, airy king.
Storms may ruffle thy soft breast,
But they soon are hushed to rest;
Leaving nothing in their train,
That can give thy bosom pain.
Soon are ye upon the crest
Of heaving waves, with plumage drest;
Knowing not that ye have been
Dazzled by the lightning's sheen.
But when storms distract the mind,
Sad the ravage left behind;
Tearful eyes and wasted cheek
Utter more than tongue can speak.
I with thee could brave the power
Of angry tempests for an hour;
But the constant weight of care
This poor heart can never bear.

Boston and its Environs.

The following brief but memorable and truthful sketch of a few of the "sunny spots" around the Queen City of New England, will cause a quicker pulsation at the heart of many a Californian. We know no New Englander can read them and not be carried back to scenes and associations "dear to memory;" associations linked with the loved ones of their early home. Mount Auburn! what holy ground—the dead are there. No, it is only the dust of them that sleep; their spirits have gone back to their giver, and we feel as we now commune with the spirit of those we once laid there, as the tear comes unbidden at the flash of memory—we know these pure spirits have ascended, and that "we shall meet again." The Athenæum! that temple of literature, where the living hold converse with those of giant intellect, who have passed away, and who have left volumes of their history to act on coming ages, when the marble that would keep alive their "Story" shall have crumbled to ashes, and from these ashes shall spring again, Phœnix-like, the record and deeds of good men that shall make them immortal. The vicinity of Boston! Every street, lane, and by-road, every village, hill, grove or garden, rise up in memory at the mention of thy name, and the scenes of by-gone days we live over again; and who does not love those scenes that have ever known or enjoyed them. Oh! the "Pleasures of Memory." We cite from the the Boston Journal:

Boston and its Environs.—It is always interesting to the people of a community to know the impressions which strangers receive from a visit among them, and we think the following extracts from a descriptive letter written to a Richmond newspaper by a Virginia clergyman who recently visited the city, will be perused with interest by many of our readers:

Mount Auburn and Forest Hills.—We went to Mount Auburn, the city of the dead. We drove through the cemetery, ascended the tower erected upon an elevated point in the inclosure, and enjoyed a splendid panoramic view of the surrounding country. There are some elegant specimens of monumental sculpture in Mount Auburn, and it has many natural beauties, but it is not comparable to Greenwood.

"Forest Hills Cemetery"—what a sweet name—is in a rural retreat. It is far superior in point of location, to Mount Auburn. It has been opened but a few years; and yet it already begins to vie with the most attractive cemeteries of this country. There are deep and quiet dells, and woody hill tops, with a variety of sweet and fragrant flowers scattered in endless profusion along the winding ways, called by pretty names. The specimens of monumental sculpture are in exquisite taste, and many of the epitaphs, simple, brief and touching, speak to the heart.

The Athenæum.—Some of the finest specimens of statuary in America are now in the Boston Athenæum. Many of the paintings are by the best artists, and no one should visit Boston without devoting a good part of a day to the Athenæum. The statue of Judge Story, by his son, is one of the finest specimens of the art we have ever seen. Beethoven is almost inimitable.

The vicinity of Boston.—We drove through Jamaica Plains and Brookline. And here we are at a loss utterly to give the reader any adequate conception of the beauty and elegance that displayed themselves on every hand. Architecture and landscape gardening are combined into pictures of beauty and loveliness that cheat one into the belief that he is in an Elysian field. The most beautiful graded carriage ways, covered with pulverized oyster shells, that, in contrast with the green sward, and embowering foliage of the trees and shrubbery, look like wreaths of snow lying along upon the hill sides, and drawn out through the sequestered vales. We had glimpses of unruffled lakes sleeping in the basins beneath us, and vista views of the domes and spires of the far-off city. Elegant cottages, at short intervals, with contiguous grounds, separated by neatly trimmed hedges, were constantly bursting upon our gaze, or coyly peeping out from the smothering foliage and flowers.

Canal of New Granada.

It is a self-evident proposition that commerce between countries, as between parts of countries, must be greater or less, according to the diversity of production. When two nations like England and New England produce nearly the same articles at about the same skill and cost, that trade or interchange of commodities between them can not be great. Each has of its own enough of that which the other produces. On the other hand, the interchange between an exclusively manufacturing and an exclusively agricultural country must be very great, because each wants exactly that which the other produces. During the long peace that has prevailed since the wars of Napoleon, the countries of Western Europe and North America have assimilated through the process of manufacturing arts. England has become a larger customer for produce and a greater seller of goods. She has sought markets for those sales, however, out of Europe—in the East, in South America, and in the distant isles of the ocean, where raw materials and tropical products reward her manufacturing industry. In the same period the United States have developed their manufacturing powers, annually requiring less foreign manufactures and yearly consuming more of their own raw products. The United States consume more cotton now than England did in 1835. The evident tendency of national greatness here is to command all the vast tropical wealth of Central and South America, for interchange with northern industry. The necessity of trade is bringing the Canadas within the Union. The pressure of population and their interests annexed Texas and New Mexico, involving the occupation of California, which produced the Panama Railroad, the effect of which is to encircle Mexico and place the resources of Central America open to American enterprise. The United States, thus early in their history, are brought to the same point in relation to the wealth of the Indies that Spain reached in the plentitude of her commercial power and enterprise. More than 250 years since the resources of South America were fairly estimated by Spain; and among the monuments of her greatness is the "Canal of Carthagena." The work, 92 miles long, was built at an immense cost, and in a manner so substantial that time has failed to affect it. The river Madalena, rising in the rich province of New Granada, after reaching Honda, runs 700 miles through a country with a population of 3,000,000, and teeming with every tropical product—gold, sugar, coffee, rice, corn, tobacco, cotton, India rubber, Peruvian bark, cocoa, dividivi, dye woods, cabinet woods, in every variety. All these articles, with others, are profusely abundant, in a country eminently healthy. The Madalena, like the Ohio, rolls through the prolific soil bearing its products to Calama, where the canal, from 7 to 22 feet deep, receives and delivers them at Carthagena, one of the largest and safest bays in the world. It is seen at once that this magnificent old canal is the key to a tropical region of vast extent and resources, precisely such a country as the extention of commerce requires. That canal is now, together with its lands, thousands of acres, in possession of the "New Granada Canal and Steam Navigation Company," with the exclusive right to navigate it by steam for 99 years. The company is chartered by the State of New York and Henry Wells President. The capital is $2,000,000. It is by such means alone that the best established laws of trade are made to apply to the Southern continent, developing its resources and making it tributary to the wants and wealth of the North.—*U. S. Economist.*

Commercial Morality.

The failure of the great banking house of Strahan, Paul & Bates, of London, is a remarkable event in English commercial history; not for the reason merely that they are bankers, or that the sum for which they have failed is large, but that the facts present a deliberate misappropriation of trust funds, and a systematic violation of the principles of commercial honesty totally at variance with the high reputation for probity and honor which have been the supposed characteristics of old English merchants.

The house in question has been in existence since the days of the Commonwealth. During nearly two centuries it has, as a bank of deposit, making advances on title deeds, plate, &c., enjoyed the confidence of the most exalted class in British society. As the wealth of England has increased and the revenues of its nobility and landed gentry have grown in amount, the business of this firm has increased. Of late years, under the title of Halford & Co., navy agents, it has opened some three thousand accounts with naval officers and connections. The members of the firm have been presiding officers in Life Insurance and other companies, and have been guardians and trustees for numerous families and minors. In short, they have been among the most trusted and honored of that class of "merchant princes" who have claimed to be the leaders of the world's commerce. Succeeding members have sustained that position for the house during two centuries, until now, William Strahan, Sir John Dean Paul, Bart., and Robert Makin Bates, have been arrested for felony in the misuse of the funds entrusted to them for minors, nobles, officers, widows and gentry. The frauds of these men have beggared thousands.

Almost simultaneously with this disaster, has been the discovery of misconduct in another firm, which has occupied the leading position in its line, viz.: Overend, Gurney & Co., who, by concealment, become parties to extensive frauds. Joseph Gurney, perhaps, stood higher in the London financial world as a model of probity, than any other individual. Thus, two of the most eminent houses—exponents of British commercial character—have become examples of utter want of principle and morality, where pecuniary interest is concerned. The failure of Strahan, Paul & Bates is due entirely to a gambling greediness of gain, which induced them to depart from the regular line of profitable business; hazarding the funds entrusted to them in speculative enterprises for their own profit, but at the risk of their clients. Like desperate gamblers they staked largely, and lost shamefully. The result, although it cannot palliate the short-comings of many American houses, at least deprives England of the right to make reproaches, and her writers of the power to moralize upon the "low state of commercial honor in America."

The great revulsion of 1848, when English firms failed by the hundred, and all bills on England for the first time came to be regarded with distrust, was a rude shock to confidence in British integrity. Since that time the struggle seems to have rapidly lowered the scale of morality, and men, to sustain themselves, became guilty of acts which before they would have scorned; and the present events lead to the consideration in how far the migration of men and capital, together with the signs of a sinking scale in commercial morality, may indicate the decay of Britain.—*U. S. Economist.*

Night Attack by the Fleet on Sebastopol.—Rear-Admiral Sir E. Lyons returned with his fleet on the 15th, to Kazatch. On the evening of the 16th the night attack by the steamers on the sea defences of Sebastopol began, all the steamers going in and discharging their broadsides, so that some eight or nine vessels thus harrass the Russian vessels very much. The plan for their going in is, on a method proposed by Lord Charles Paget, but subsequently improved by lights placed in certain positions by Capt. Spratt, of her Majesty's surveying ship Spitfire, who anchored the Spitfire, at ten P. M. off the shoal that extends from the west point of Streletska Bay. At half-past ten the Tribune slowly crept into the assigned position, and opening her broadside poured into the Quarantine Battery her shell; she was enabled to do this twice before the apparently just woke-up enemy could return her fire. Passing out, she was followed by the Highflyer, Miranda, Niger, Viper, Snake, Weazel, and two or three French steamers, at intervals of twenty minutes, thus occupying the attention of the Russians, and keeping their batteries manned all night. The Danube, with two launches from the Royal Albert, also went in boldly to about 1200 yards, and threw 24 and 12-inch rockets into the town and shipping. It was a dead calm and black night; the discharging of the broadsides, the blaze of fire, the illumined sky from the rockets, and bursting of shells on the parapets of Quarantine Battery, with the close fire from the Russians, made it a grand night scene.

Time Table.—We recommend our readers to copy this time table upon a card for their sitting rooms and writing tables, as it will prove valuable ofttimes as a reference, showing the time of day at different places when 12 o'clock (noon) at New York:

Morning			
San Francisco	9		
Mexico	10		
St. Louis	11	Evening	
New Orleans	11		1
Cincinnati	11		1
Louisville	11		1
Nashville	11		1
Havana	11		1
Boston	11		1
Washington	11		1

New York, Noon.

Ladies' Department.

☞ To our Lady Correspondents.—We shall be most happy at all times to receive communications upon every subject touching "home blessings and comforts," the subjects of Education, Domestic Cookery, and Housewifery in all its departments; Essays upon the influence of the Mother, Wife, Daughter and Sister. These all will be most acceptable, and their publication tend to a more enlightened education upon such subjects. Writers can indulge their own feelings either in Poetry or Prose. It is our desire and intention to occupy two or more columns to the "Ladies Department," weekly, and we trust there are many very able writers that only need to *let their light shine* to be known and honored in this land. As our journal is intended as a "Family Paper," we trust this subject may be esteemed worthy those to whom it is addressed.

The following lines were obtained from the late Mr. R. A. Davenport, compiler of a Dictionary of Biography, and author of several other English works. They are in Byron's own handwriting, were sent with the seal and post-mark of the letter which inclosed them, and were never before published. The lines throw some light on the apparent indifference which Byron was in the habit of exhibiting on the occasion of separation by death, or other causes, from those he loved; and especially on the occasion of his parting with Madame Guiccioli, at the period of his embarkation for Greece:

"I heard thy fate without a tear,
Thy loss without a sigh;
And yet thou wert surpassing dear,
Too loved of all, to die.
I know not what hath seared mine eye:
The tears refuse to start;
But every drop its *lids* deny,
Falls dearly on my *heart*.

Yes—deep and heavy, one by one,
They sink, and turn to care;
As caverned waters wear the stone
Yet dropping, harden there:
They can not petrify more fast,
Than feelings sunk remain,
Which coldly fixed, regard the Past,
But never melt again!"

A "Paper Dickey" has usually been thought an appurtenance of that peculiar dandyism known as shabby gentility, but the Old Colony Memorial tells us that the article is about to become the height of comfort and fashion. The editor has recently examined a lot of collars that pleased him greatly, and which he describes thus: "This invention was made by one Hall, who has obtained a patent for the same, and whose manufactory is at No. 408 Broadway, New York. The Dickey is made of paper, and a thousand an hour are turned off by machinery. They bear a stamp on which the patent and owner's name are observable, and are cut, creased and dented after the fashion of our common linen collars. A slit runs the entire length on either side, by which breakage or bending is prevented. They are highly polished, and no amount of perspiration can disturb their equilibrium. They will be found peculiarly advantageous in the warm days of summer, and in the heated ball room or theatre. They bear such a striking resemblance to the linen collars we are in the habit of wearing, that we could not credit the statement made about them, until, by permission, we tore one. They are strong, durable, and the very cheapest invention of the kind we have ever seen, the wholesale price being three and a half cents.

Valuable Recipes.

A New Preserve.—A correspondent sends us the following: "I have lately been very busy making a new kind of preserve, which, I may say, is quite a discovery, to me at least, and which promises to insure me a plentiful supply of good, wholesome jam, for my family during the winter at a price below the usual cost of preserves. I was, the other day, making some ordinary apple jam, and before finishing it, I put in some blackberry juice, in order to give it a little color, and I was surprised at finding how much the preserve was improved by the addition; so much so, that it might be mistaken for damson jam. As you will see by the following proportions, the cost must be very small, wherever apples and blackberries are to be got. I put to two quarts of the juice of blackberries—that is, I bring the berries up to a simmer for five minutes, and then strain them through a coarse cloth—and about six pounds' weight of cut-up apples and one pound of crushed lump-sugar, and stew it up in the usual way, till the apples are softened down, and the mass becomes of the usual thickness. It is wholesome and good, and I thought that what was within any one's reach ought to be known."—*Godey's Lady's Book.*

Pine-Apple Jelly.—Take a perfectly ripe and sound pine-apple, cut off the outside, cut it in small pieces; pound them, and to each pound put a tea-cup of water; put it in a preserving kettle over the fire, and let the kettle and contents simmer; then strain it and measure it through a bit of muslin. For each pound of fruit take a pound of sugar, put a tea-cup of water to each pound; put it over the fire until it simmers; then add the pine-apple juice. For each pound of the syrup, clear and free of the last scum, add four eggs, but beat the whites by themselves on a plate to froth, you beat it a little after it is mixed.

Elderberry Wine.—[illegible] an excellent recipe for [illegible] a large [illegible] pour [illegible] boiling water [illegible] twenty-four hours, stirring occasionally; then strain off the liquor into a [illegible] adding two pounds of sugar to each quart of liquor; it should not [illegible] the stopping [illegible]

HOTELS IN NAPA.—Since the discovery of the Napa Sulphur Springs the traveling through this magnificent valley has largely increased, and it is important that comfort, convenience and liberal accommodations should he had in so very important a thoroughfare. There are hut two hotels, the Napa Hotel, by Gilmore & Taylor; and the American, hy Mr. Chapman.

The American is only intended for the steady boarders among the citizens of Napa, and although it can sometimes accommodate outside guests, it is only intended to he, as it is, an excellent home Hotel for the citizen hoarders of Napa.

The Napa Hotel is under the charge of Gilmore & Taylor, who have kept it about three years; they are the proprietors, and their house is the general resort of all travelers. Connected with this Hotel is a large stable, with stages and carriages for the conveniences of visiters to Napa and to the Springs.

Messrs. S. & T. are well and widely known, and do all in their power to give their visitors every attention and comfort; the increased travel keeps their house continually full, and will soon demand enlargement, additions and corresponding comforts and luxuries, which we have no douht these gentlemen will see it is for their interest to prepare for their visitors.

With the present disposition of families and parties to travel, it is of the highest moment that our public Hotels should he of the first order—and in no place that we know of at the present time more important than Napa City.

FURNITURE—"*A Bed of Down.*"—Ye lovers of ease and comfort read the advertisement of Messrs. Howes & Co., of San Francisco, and no longer make an excuse that the reason you have so long led the life of a hachelor, was that it cost so much to furnish a house, you could not afford it.

Messrs. Howes are now selling furniture at prices, in some instances, less than you could bny in New York or Boston. Among the famous luxuries they offer is the matress of Pulo, or Down, far superior to hair or feathers; we have learned from many sources that there is a peculiar property in this article (which is the bark of a tree) that is a guard against any venomous insect; that the natives, where it is found, feel secure from all danger, if they have a bag of Pulo under their head for a pillow. Those venomous *tarantula* and *centipede* ayoid it, and we presume all other insects will. If upon trial it shall keep off fleas, then friend Howes & Co. have made their fortunes. However this is, their matresses and furniture are of the very hest, and their prices the lowest.

FROM THE EAST.—The steamer Golden Age arrived at San Francisco on Wednesday last. Dates are to August 4. being two weeks later, but the news is of little real interest. No event of importance had taken place before Sebastopol, but preparations continue to he made to Kamiesch and Balaklava for the secret expedition, the object of which remained undivulged. There was a report current in Paris that the bombardment of the Malakoff and Redan had been resumed, preparatory to another assault. It is stated that the siege of Sebastopol is to be raised.

The official report on the French loan states the amount raised to be 3,600,000,000 franes, six times the amount asked for! The number of the subscribers is 310,000.

A correspondent of the New York Trihune, writing from Paris, August 2, says that the Dillon affair is at last definitely disposed of. Instead of firing a salute when the flag is hoisted, the first French man-of-war which puts into the port of San Francisco is to he received with a salute.

Hon. Abbott Lawrence, of Boston, died on the 18th of Augnst.

Three thousand boxes of fruit, principally grapes, were brought up on Tuesday last, to San Francisco, by the steamer Republic, from the Southern Coast.

TO ADVERTISERS.

IN order that our patrons may have some idea of the extent of our circulation in this country and abroad, and the benefit which may be derived from advertising in our paper, we publish the following list as comprising most of the principal places in which our journal circulates, showing how useful it is to those who wish their business widely known:

San Francisco, Sacramento, Stockton, Marysville, Grass Valley, Rough and Ready, Nevada, Downieville, Yreka, Shasta, Columbia, Jackson, Sonora, Colusa, Sonoma; San Juan, Monterey county; Santa Clara, Santa Rosa, Santa Cruz, San Jose, Mission San Jose, Napa, Nicholnus, Benicia, Petaluma, Placerville, Pajaro Valley, Oakland, Alameda, Union city, Alvarado, Auburn, Bodega; Bidwells, Butte county; Hamilton, Ione Valley; Knight's Landing, Yolo county; Los Angeles, Monterey, Martinez, Uniontown, Humboldt Bay; Port Townsend, Oregon; Salem, O. T.; Oregon City, O. T.; Portland, O. T.; Washington Territory. To every Post Office and Express Office in this State, and to nearly every State and State Society in the Union. Besides to this it is sent to many of the principal cities in England, Scotland, Ireland, France and Belgium.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will he pleased to render any information or assistance to further any interest connected with agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President,

☞ **Peruvian Febrifuge.**—The formula for this preparation is the result of practical observation and experience for a number of years, in the treatment and cure of Fever and Ague, and such has been the uniform success in its use, that no case is known where this valuable remedy failed to cure when timely administered. A single trial will afford relief, and a few doses convince the patient that he has found the real "El Dorado" of a permanent cure for Fever and Ague and the various other grades of Fevers.

Agents—HENRY JOHNSON & CO.,
v4-9 1m 146 Washington street, San Francisco.

☞ **Ex-Alderman Perkins sends us the following,** in favor of WISTAR'S BALSAM OF WILD CHERRY:

BOSTON, Feb 3, 1851.

Dr. S. W. Fowle: Dear Sir—For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me for business. I had taken but a small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful. I attribute this entirely to the good effects of your Wild Cherry, as I took no other medicine whatever. I cordially recommend it to all my friends. Respectfully yours,
v4-11 SAML. S. PERKINS.

Sold by all Druggists. v4 8

MARRIED.

On the 2d Sept., at Quincy, Plumas county, by Rev. H. E. Foster, Mr. P. O. Hundley and Miss Kate Russell.

On the 11th Sept., by Rev. J. A. Benton, Sam. P. Blinn and Miss Helen B. Goodwin, both of San Francisco.

On the 6th Sept., in Keystone Township, Yube county, Sbela Buckner and Miss Liza Jane Hedge.

On the 8th Sept., in Martinez, by Rev. Mr. Caldwell, E. F. Morton and Miss Sarah E. Morse, both of San Francisco.

On the 6th Sept., in Placerville, John Hume and Miss Margaret Tackaberry, both of Placerville.

DIED.

On the 2d Sept., In Shasta, Mrs. Mury, wife of A. Skillman, Esq., one of the proprietors of the Shasta Courier, aged 20 years, formerly from Wisconsin.

On the 3d Sept., In Shasta, of dysentery, Ella, the youngest daughter of R. T. and Frances B. Sprague, aged 2 years.

On the 4th Sept., In Weaverville, of inflammation of the stomach, John Carues, aged 32 years.

New Invention!
Now, Count Your Chickens?!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, i. e., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 26 Third street, South Beach, near South Park.

To the Creditors of Enoch Epps, deceased.

NOTICE is hereby given to all persons having claims against the late Enoch Epps, deceased, to exhibit the same, with the necessary vouchers, to me at my residence on the "Burns Ranch," in Napa Valley, in the county of Napa, within ten months from this date, or be forever barred.

Gilt Gilt Camphene.!?!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at 51 K street, Sacramento for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure genuine.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices. [v4-1] WILLIAM BAILEY.

ALBANY AGRICULTURAL WORKS,

ON HAMILTON, LIBERTY AND UNION STREETS;

WAREHOUSE AND SEED STORE,

No. 52 State Street, Albany, N. Y.

The Proprietors of the above-named establishment being the sole owners and manufacturers of

EMERY'S PATENT HORSE POWER, &c.,

☞ ALL ARRANGEMENTS WITH OTHER PARTIES FOR THEIR MANUFACTURE HAVING EXPIRED ☜

have formed a new Copartnership, under the firm name of

EMERY BROTHERS,

And will continue the manufacture and sale of AGRICULTURAL IMPLEMENTS and MACHINERY, as heretofore, at the old stands of EMERY & CO. By this arrangement the united efforts, and interest of the Brothers, long known to the public, are secured, and no exertions will be spared to meet the wishes of those dealing in and using the class of implements they manufacture—their leading branch being the manufacture of the justly celebrated

Emery's Patent Changeable Geered Railroad Horse Powers,

with the machines to be propelled by it, as Threshing Machines, Saw Mills, and Machinery generally.

These Powers having been submitted repeatedly to the most severe tests and trials to determine their relative merit and utility with those of every known manufacturer, have without exception been awarded the highest prizes for superiority—among which were the following:

N. Y. STATE AGRICL SOCIETY, 1854, 1853, 1852, 1851, 1850	MARYLAND STATE AGRICULTURAL SOCIETY, 1853
OHIO STATE BOARD OF AGRICUL., 1854, 1853, 1852, 1851	MISSOURI STATE AGRICULTURAL SOCIETY, 1853
MICHIGAN STATE AGRICUL'L SOCIETY, 1853, 1852, 1851	AMERICAN INSTITUTE, ... 1852, 1851
INDIANA STATE AGRICULTURAL SOCIETY, 1853	NEW YORK CRYSTAL PALACE, ... 1853
ILLINOIS STATE AGRICULTURAL SOCIETY, 1853	CANADA PROVINCIAL SOCIETY, ... 1852, 1851
PENNSYLVANIA STATE AGRICULTURAL SOCIETY, 1853	CONNECTICUT STATE AGRICULTURAL FAIR, 1854

WARRANTY, ECONOMY, CAPACITY, &c.

THE TWO-HORSE POWER and THRESHER is capable, with three or four men, of threshing from 175 to 224 bushels, of wheat or rye, and the ONE-HORSE POWER from 75 to 125 bushels of wheat or rye; or both kinds of Powers, &c., are capable of threshing double that amount of oats, barley or buckwheat, per day, of ordinary fair yield. If the crops be extraordinarily heavy or light, greater or less results will follow.

These Powers, Threshers, &c., are warranted to be of the best materials and workmanship, and to operate as represented by this Circular, to the satisfaction of the purchasers, together with a full right of using them in any territory of the United States, subject to be returned within three months, and home transportation and full purchase money refunded if not found acceptable to purchasers.

The public may rest assured the reputation heretofore earned for our manufactures, shall be fully sustained, by using none but the best material and workmanship; and by a strict attention to business, they hope to merit and enjoy a continuance of the patronage heretofore so liberally bestowed, which we respectfully solicit.

N. B.—All articles bear the name of "EMERY" in raised letters upon the cast iron parts, and however much others may resemble them, none are genuine without this mark.

Full descriptive illustrated price Catalogues sent gratis on application.

They have recently renewed and replaced most of their operating Machinery and Tools, and are better than ever prepared to supply promptly, their Implements and Machinery of superior quality and workmanship.

They have opened the spacious Rooms on State street, the most eligible in the city, for the display and sale of their Machinery, Implements and Seeds, which are all new and of the most approved and complete kinds extant, instead of an accumulated stock of miscellaneous Goods and Seeds of an old concern.

The attention of a discerning public is solicited to our present stock of goods, before selecting and purchasing the coming season.

ALBANY, N. Y., March 15, 1855. (v4-10 6m) EMERY BROTHERS.

AGRICULTURAL, &c.

Important to Millers and Farmers.

THE undersigned having discovered a remedy for the injury to wheat arising from Smut, and a plan of renovating the same, has secured by a "Patent Right," his title to the same.

From the experiments made by experienced millers, the most satisfactory results have been achieved. From well attested trials and repeated proofs of the capabilities of its power to clean the smut from the wheat, it has been ascertained that the most perfect purification takes place in the wheat, while at the same time a large saving of time, labor and cost accrues to the miller, and the flour is as pure and white as from the finest wheat.

Farmers who have crops of wheat, now unharvested, may yet save them, for they can easily be assured that their grain can be restored and the value saved to them.

Licences, with all particulars for the use of this Patent Right, can be obtained at the warehouse of the subscriber, on Clay street, between Drum and East, San Francisco.

v4-2 CHARLES CAMPBELL.

Agricultural Warehouse,

193 *Front street, New York.*

THE subscriber offers for sale an assortment of Agricultural Implements of the latest and most approved kinds, among which are the celebrated Premium Plows, which were awarded the highest premium of the American Institute in 1846, 1848, 1849, 1850, 1851, 1852 and 1853. Also, Eagle, Centre Draught, Peoria, and all other plows in general use.

Pitt's, Hull's and Smith's Horse Powers and Threshers, Burrall's, McCormick's, Hussey's, Seymour & Morgan's, and Ketchum's Mowing and Reaping Machines. Yankee self-sharpening Straw Cutter—the best article in use; Corn Shellers, Fanning Mills, Picks and Pick Handles, &c., &c.

v3-9-3m W. C. WALKER.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, all using the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest [illegible] from all using them, among whom are [illegible] Sacramento Book & Hull, Henry Virgin, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hall, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM

N. B.—All information given, and orders left with WARREN & SON, Sacramento, will be attended to.

The following certificate is among the number received:

"This is to certify that I have used H. B. Ingham's Improved Smut Machine, and believe it to be superior to any mill I have seen. It is very simple in its construction, easily kept in order, and requires less power, and does the work more perfectly than any other I have ever seen or used."

WM. SHARP, Agent American Mills,
v4-9 3m Pine street, San Francisco."

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,

No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city; by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of *forty-three thousand persons*, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

v3-18 WAINWRIGHT, RANDALL & CO.

SANDS' SARSAPARILLA.

IN QUART BOTTLES.

For Purifying the Blood, and for the Cure of

Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Boils, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of this *one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and parents in making choice of which they will use should take no other, but that one entitled to their confidence, from the fact of its cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.

PATTERSON, N. Y. July 20, 1854.

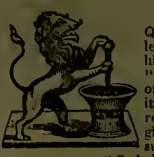
Messrs. A. B. & D. SANDS (Druggists)—Having witnessed the most beneficial results from the use of your Sarsaparilla, I give me pleasure to send you this testimonial in regard to my own. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which resulted in [illegible]. The swelling was lanced by his physician, and continued [illegible] after that no less than eleven [illegible] and at one time. We [illegible] relieved him much, [illegible] much affected that [illegible] months [illegible] Washington [illegible] Sarsaparilla, and [illegible] began immediately to improve, and in one week's time [illegible] that less than a [illegible] perfect cure.

With pleasure, I recommend it to every one.

D. [illegible] BALL.

We the undersigned, neighbors of Mr. [illegible] subscribe to the truth of the above statement.

H. A. [illegible] A. M. TROWBRIDGE,
GEO. T. DEAN, EASTWOOD.



[illegible] A. B. & D. SANDS, Druggists, [illegible] New York, and for sale by [illegible] San Francisco; [illegible] and by druggists generally throughout the country. Price $1 per bottle, or six bottles for $5.

For sale by Johnson & Co., [illegible] San Francisco; [illegible] and [illegible] & Co., Sacramento. v4-5 3m

MEDICAL.

IT IS A FIXED FACT,

CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis. Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

Varieties.

THE DEVIL OUTWITTED.—One of our exchanges contains the following amusing story illustrative of a grave subject—the methods and instrumentalities sometimes employed by Providence to administer to the wants of mankind: "A poor, but pious widow lady, who resided a short distance from one of the villages of Eastern New York, had expended her last dime in paying the rent of the hovel which served to partially shelter her from the storm of winter. Not a farthing or a friend had she in the world, nor anything to satisfy the cravings of her appetite. In this dilemma she resorted to him who has promised to be a 'husband to the widow.' She poured furth an eloquent prayer to the Throne of Grace, and closed with an earnest appeal?—'O, Lord! give me this day my daily bread?' It chanced that a mischievous urchin passed as the old lady was on her knees, and putting his ear to the window, heard the burthen of her petition. Thinking to have some fun at the widow's expense, he proceeded to a hakery not far distant, purchased a loaf of bread, and returned to the hovel. Mounting the fence, it was not a very difficult matter to gain the roof of the house, not much harder to reach the chimney and toss the loaf down. Springing to the ground and placing his peepers to the window, he saw that the old lady had picked up the loaf of bread, set it upon the table, and was again on her knees returning thanks. 'Why you old fool you,' exclaimed the urchin, 'the Lord never sent that—I threw it down the chimney myself.' 'O,' returned the old lady, looking up with a reverential air, 'the Lord sent it, if the Devil did bring it.'"

GREASING THE RAILROAD.—One day a peanut and candy-selling urchin at the railroad station was rudely pushed off the platform by the conductor of the freight train. His wrath was great, and he determined it should he the spring of equal great annoyance to his foe. He sold his stock of peanuts and purchased a piece of fat pork. Young America attached a piece of string to the pork—and accompanied by another juvenile, went down to the place where the grade was steepest. "Now look 'e here," said the peanut seller to his companion, as he placed the fat pork on the rail, "you take hold of that string and pull me along." He squatted on the pork, and was trailed up and down both rails for about half a mile. Of course the rail was well greased. The freight train came up. It was literally *no go!* For two hours the engine vigorously puffed, in a vain attempt at progress. The conductor was finally obliged to call in the aid of another engine. Thus concludeth the history of the Peanut-seller's Triumph; or, Young America's Revenge.

DIAMOND CUT DIAMOND.—A certain gentleman a few evenings since, boasted to a young lady that hy examining any head, he could tell "proclivities and faculties." Without saying a word, she went out and brought him a cabbage head saying, "that's a fine head for you to display your knowledge upon." Not at all disconcerted, he told her its intellectual faculties were like those of many young ladies, as also were its native propensities. If an opportunity offered, he had no doubt it would greatly increase. It was naturally more noted for its verdancy than anything else, and in short, was better suited for the kitchen than the parlor. Which had the best of the joke, we leave for the reader to decide.

PRINCE'S PROTEAN FOUNTAIN PEN.

[PATENTED JAN. 23, 1855.]

T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on light ly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upwards; the piston pens with the cap downwards.

Use good ink, free from sediment; Headley & Field's American Fluid, also Bryan & Wilcox's, and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-33m

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets,.....MARYSVILLE.

☞ Open all Night. ☜

THIS supberb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $1 00
Lodging, 75 cts., $1 and $2 per night.
v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and handsomely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3r-16 ist C. M. DAVIS, Proprietor.

International Hotel.

THE extensive addition to this Hotel is now finished and ready for occupation, making altogether *one hundred and fifty rooms*. Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c, PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.

SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

To Farmers, Hotel Keepers, Ranchcros & Others.

BRADSHAW & CO., having removed into their New and Spacious Store, and being regularly supplied from the States by every clipper, enables them to have the largest and best stock of GROCERIES AND PROVISIONS in the State, and at Low Prices.

Persons living at a distance can always have their goods packed and shipped, free of expense. Remittances can be made through all the expresses or by mail. Our stock consists of

Powdered and Crushed Loaf Sugar;

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remittent fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,

EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

For sale by Henry Johnson & Co., 146 Washington street, San Francisco; S. T. Watts, Marysville; and HOWARD & CO., Sacramento. v4-5 3m.

Cooper's Eye, Ear and Orthopredic Infirmary,
San Francisco.
No. 14 Sansome street, near the Rassette House.

PATIENTS laboring under Disease of the Eye, the Ear, and those afflicted with all varieties of deformities, resorting to this Institution, will find at once a home, where Miners as well as others can be accommodated with board and comfortable rooms, in plain or costly style, according to their taste.

Dr. Cooper has visited all the important hospitals in Europe, for the purpose of extending his knowledge of medicine and surgery, and will give the Infirmary his immediate supervision.

N. B.—All Surgical Operations free to patients who present themselves at the *clinic* on Wednesdays and Saturdays.

For particulars apply to DR. E. S. COOPER, at the Infirmary. v4-10 3m.

MISCELLANEOUS.

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a Fire Engine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated. N. HUNT,

26 Devonshire street, New York.

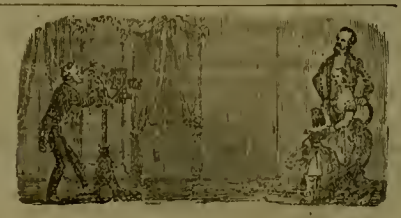
Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-3 3m.

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE,)
157 *Commercial street, San Francisco.*

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & CO.'s Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.



v4-1 COLLINS & CO.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,
MARYSVILLE.
Corner of California and Battery streets, San Francisco.
No. 56 Federal street, Boston.

IMPORTERS of Hardware, Iron, Steel, Cordage, Paints, Oil Varnish and Window Glass, direct from the Atlantic States an Europe, with a COMPLETE ASSORTMENT OF TOOLS AND IMPLEMENTS for *Farmers, Miners, Carpenters, Coopers, Caulkers and Gravers, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others.* v3-5

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass,)

Now Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the most arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

Saddlers, Attention!

CHAS. R. SCHEUNER respectfully informs the manufacturers of Saddles that he is now prepared to do all kinds of stampings on Californian and Mexican styles of saddles, and he is confident that his style of workmanship cannot be surpassed in this State.

Please call and examine specimens.

☞ Orders from the country promptly attended to.

v3-25 170 K street, Sacramento.

Candies.

GUM-DROPS, Jujube, Rock Candies and Lozenges—large assortment. Known to be superior in quality, and to keep, for California market, better than any other.

STEWART & BUSSING,
4r-5 3m 336 Pearl street, New York.

Influence of Agricultural Societies.

We copy from the Secretary's Report of the Massachusetts Board of Agriculture the following statement, showing most conclusively the lasting benefits which result from Agricultural Associations, and the wisdom and necessity of a liberal policy on the part of the State in fostering with parental solicitude the great and growing interest.

We have received the full report of the Mass. Board of Agriculture for the past year, from their able Secretary C. L. Flint, Esq., by the hand of J. [illegible] Lawton, Esq., of Fall River, Mass.; and we shall have the pleasure of laying before our readers, from time to time, the practical results of the liberal policy of Massachusetts legislation, and of other States also. We refer our readers to the extracts which we have made to-day:

Probably the agricultural associations have been among the most efficient instruments in raising the standard of Massachusetts Agriculture. These societies are now seventeen in number. The oldest of them, the Massachusetts, founded more than sixty years ago by individuals residing in different sections of the State, has now a permanent fund of more than twenty-four thousand dollars; the youngest, the Middlesex South, has started into life since my last report was presented, and is exercising a marked and widely felt influence.

The exhibitions held by the several societies during the last year were unusually successful. The articles exhibited were generally more numerous than on previous occasions, and the attendance was larger than it has usually been. It was a very common remark, that the societies seemed to have gained new life and vitality. These exhibitions, indeed, have become THE GRAND HOLIDAYS OF THE STATE; and the county fair is now generally regarded as the most useful and agreeable occasion of the year.

The members of the Board of Agriculture have made it a part of their duty to attend, not only the exhibitions of their own county societies, but also those of the other counties, and to report the results of their observations and inquiries to the Board. These reports for the last year are appended to this Report, and reference is respectfully made to them for further details in regard to each exhibition. This practice has already led to some valuable suggestions and excited a useful spirit of emulation among the different societies. It must have a further good effect, both by extending a knowledge of all that is worthy of imitation, and by bringing to general notice all that should be condemned.

It has also been my intention to attend the exhibitions of each society, so far as it could be done without interference with other duties; but it has frequently happened that several of these exhibitions fell on the same day, which made it impossible for me to carry my plans into execution. The subject of fixing times for holding these festivals in the different counties is now before the Board; and it is to be hoped that the societies will find it for their interest to adopt such arrangements as may be presented for their approval.

The prosperity of the societies has continued to increase, and many new members have been added.

The aggregate amount of permanent funds now belonging to the societies is no less than - - - -	$99,193 35
Amount received from new members and donations, for the year, -	6,604 10
Total amount received by the societies for the year, - - - - -	28,829 20
Total amount offered in premiums by the societies, - - - - -	16,281 81

This shows an increase in the aggregate amount of permanent funds during the year of $6,876.81.

The details of the finances of each society will be found in the Appendix to this Report, to which reference is respectfully made.

As may be inferred from what has already been said, the general condition of the agriculture of the State is highly gratifying. Those who, from their situation and opportunities of observation, are the most competent judges, entertain the opinion that there has been as much advance during the past year as could reasonably have been expected; and I may add, that the facts which have fallen under my own observation have led me to the same conclusion. The answers returned to the questions proposed in the circular already frequently alluded to show at the same time the deep interest taken in agricultural pursuits and the skill and general intelligence of those engaged in them. Perhaps it would be difficult to estimate too highly the importance of doing all that can be done, by judicious action on the part of the government to keep alive and cherish an earnest desire of constant progress in this department of industry. It should be remembered that every improvement in the general system of farming, by the great increase of agricultural products and the consequent greater ease of providing the means of subsistence, must contribute materially to the comfort and happiness of every citizen of the Commonwealth, while it adds vastly to the aggregate wealth of the State. The encouragement that has hitherto been afforded by the government of Massachusetts has been fully appreciated by the farming community, and has for a long time been, and still is, producing its desired effect in increased crops and improved modes of culture. If we may judge of the future by the past, we cannot doubt that a continuance of the same policy will be followed by similar good results.

CHARLES L. FLINT,
Secretary of the Board of Agriculture.

Reports on Irrigation.

(FROM MASS. BOARD OF AGRICULTURE.)

We would urge the particular attention of our readers to this important subject. We ask their attention to the various subjects *connected with* irrigation, which we fear is too generally overlooked—such as the mechanical action of the waters, the difference between running and stagnant water, surface and underground water. The subject is worthy an attentive perusal, and is ably reported:

The next mode is by irrigation. This is so dependent upon circumstances, however, that it is not practicable for all; yet many lands in this State are so situated as to make it not only judicious, but truly economical. It has never been attempted to any extent by the farmers of Massachusetts; but the few instances which have come under my observation have been successful and remunerative.

Irrigation has been practiced by successful cultivators from the highest antiquity. Long before Europe was civilized, the waters of the Tigris and the Euphrates were used in this manner for agricultural purposes; and in Mesopotamia, between these two rivers, there were more than 250,000 acres of irrigated lands, not to mention similar works on the grandest scale in China, and the Assyrian empire, Nineveh, Babylon, Egypt, Palestine, and many other countries of great antiquity. Modern nations have also profited largely by irrigation, particularly Lombardy, Tuscany, the south of France and Spain.

I am not prepared to say whether, under similar circumstances of soil and value of lands, equally good results might be anticipated here, where the climate is so different, and the value of lands, and of labor in particular, is so much greater. But every one is familiar with the fact that land is fertilized by extraordinary supplies of water. This is too palpable around the margins of every running stream to be denied; and while we are subject every summer to be visited by severe droughts, no practicable means of guarding against them should be neglected or overlooked.

The modes of irrigating are as different as the kinds of water used and the purposes to which it is to be applied. To attempt to state them fully, and the comparative advantages of each, would require a distinct treatise upon this subject. It is sufficient to enumerate the most common of them. Superficial irrigation was undoubtedly suggested by observing the wonderful effects which arise from the occasional overflow of rivers. The most remarkable example of this natural irrigation of arable lands is to be seen in the annual overflowing of the Nile; and the main principles which regulate this kind of irrigation are to be found in similar examples, where the overflowing is occasional, and the water, instead of being left to stagnate upon the surface, is moving gently over it, and depositing the alluvial matter held in suspension. The most wonderful cases of fertility on record are illustrations of these occasional irrigations. The richness of the Valley of the Mississippi and of the Connecticut is to be ascribed to this source; and these overflowings are imitated in all attempts to irrigate the surface by conducting water over it by means of a system of shallow open drains, which lead the water from its natural channel, and keep a constant flow, without allowing it to accumulate in any part.

Another kind of irrigation consists in conducting the water into, instead of upon, the land by means of open drains, into which the water can be led and raised sufficiently to saturate the whole area surrounded by the drain. If the field is level, it is sufficient to fill the drain or ditch, and keep it filled till the soil is moistened; but if the land is sloping, the lower end of the ditch is stopped till the land is saturated, and then let off. It is ordinarily much less expensive than surface irrigation, and has been practiced with great success in Lombardy, as well as in England and Scotland. This kind of irrigation is more frequently used for cultivated annual crops than for grasses.

The irrigation of grass lands is found to be very beneficial in moist climates, and in such it greatly promotes the luxuriance of the growth. But climate undoubtedly greatly modifies the effect produced. It is the opinion of some that the grass which has been produced by irrigation is of an inferior quality. This opinion is expressed by several farmers, in answer to the sixth question of the circular, as to the results of experiments in irrigation. This opinion is also expressed by Columella, a celebrated Roman writer on agriculture. "Land," says he, "that is naturally rich, and is in good heart, does not need to have water set over it; and it is better hay which nature of its own accord produces in a juicy soil, than what water draws from a soil that is overflowed. This, however, is a necessary practice, when the poverty of the soil requires it; and a meadow may be formed either upon a stiff or light soil, though poor when water is set over it. Neither a low field with hollows, nor a field broken with steep rising ground is proper; the first, because it retains too long the water collected in the hollows; the last, because it makes the water run too quickly over it. A field, however, that has a moderate descent may be irrigated if it be so situated as to admit of it; but the best situation is where the surface is smooth, and the descent so gentle as to prevent either showers or the rivers that overflow it remaining too long, and, on the other hand, to allow the water that runs over it quietly to glide off." But though not so nutritive as grass growing in the natural moisture, it is probably not so much less nutritive as many would suppose.

Stiff soils are generally sufficiently moist without irrigating, and light soils are more suited to this treatment. Sandy and gravelly soils, with a porous subsoil, are greatly benefitted by it.

River water is most frequently used for these purposes, though spring water may be used to great advantage; and [illegible] containing a large amount of animal or vegetable matter, are always eminently suitable for the purpose of irrigation.

But the value of irrigation does not depend solely upon the supplies of moisture which it furnishes. "The mechanical action of the irrigatory current of water, in expanding the plants strengthening their organism, keeping their stems and root crowns clear of obstructions, promoting the equable circulation of water and oxygen around them, and carrying an equable distribution of the soluble materials of their food probably plays a considerable part in irrigatory fertilization. The [illegible] from the more circumstance of [illegible] in the water, are produces; for while the flowing water coaxes up the [illegible] of the climate and removes [illegible] and [illegible] and [illegible] and [illegible] and [illegible] grasses."

[illegible] as many words suppose. [illegible] and [illegible] and [illegible] and [illegible] and [illegible] and [illegible] and [illegible] should be [illegible] at first only as an experiment, and not on so large a scale as to involve great expense, unless there is a reasonable prospect of permanent advantage. With respect to its advantages, Sir John Sinclair says, "First, with the exception of warping, it is by far the easiest, cheapest, and most certain mode of improving poor land in particular, if it is of a dry and gravelly nature; second, land, when once improved by irrigation, is put into a state of perpetual fertility, without any occasion for manure, or trouble of weeding, or any other material expense; third, it becomes so productive as to yield the largest bulk of hay, besides abundance of the very best support for ewes and lambs in the spring, and for cows and other cattle in the autumn of every year; fourth, in favorable situations, it produces very early grass in the spring, when it is doubly valuable; and fifth, not only is the land thus rendered fertile, without any occasion for manure, but it produces food for animals, which is converted into manure, to be used on other lands—thus augmenting in a compound proportion, that great source of fertility."

The use of the hydraulic ram in raising water for irrigation will hereafter be better understood and appreciated. By means of this simple machine sufficient water may be raised to fertilize many acres, which are now comparatively worthless through a considerable portion of every dry summer.

I shall take occasion, farther on, to speak of the difference between the climate of England and our own; and the reader will be able to judge for himself how far the difference in circumstances would be likely to modify the advantages derived from irrigation in other countries. It may be stated, however, that the south of France and Spain are subject to severe droughts like our own, and that irrigation is there resorted to as a remedy against them with great success, and with very satisfactory results.

I have dwelt at some length upon this subject, because so little attention has been paid to it that its advantages are neither not understood or not acknowledged. Further experiments are needed to settle the question as to how far irrigation may be practiced here with profit. In point of natural facilities for obtaining suitable water, many parts of Massachusetts are eminently fortunate; and the time will undoubtedly come when the waters of our streams will be regarded as of inestimable value for agricultural purposes.

Crops in Napa County.

THE reports we have given of several counties and which were made in planting time, differ so much from what we anticipate will be the result, that we shall wait till after the Fair before we continue them; by that time we anticipate a series of corrected results which will enable us to arrive at more conclusive data of the crops of the State.

We were most obligingly aided by the gentlemanly Assistant Assessor of Napa, J. Cobb, Esq., in obtaining the statistics we desired. We selected from the Reports of Jos. Lefferts, Esq., the following statement of the number of acres planted and the average yield:

	Number of Acres.	Yield per Acre.
Wheat, - - -	1105[illegible]	12 [illegible]bls.
Barley, - - -	158[illegible]	20 do
Rye, - - - -	120	20 do
Oats, - - -	770	25 do
Corn, - - - -	4[illegible]	25 do
Buckwheat - -	20	
Peas, - - - -	72	15 do
Beans, - - -	95	12 do
Potatoes - - -	61	7[illegible] do
Onions, - - -	1[illegible]	2[illegible] pounds.
Melons - - -	47	7[illegible] do

By this report it will be perceived that the quantity is light in all the crops; and many of these articles, when compared with the population, will not appear sufficient to supply home consumption. How far would the crop of potatoes, beans, peas, buckwheat, corn, and these articles are in many instances chosen (as the cereals particularly) by the late rust in the crops. We [illegible] at future late dates these returns for we do not believe this county has enough to supply its home market.

We [illegible] that the Legislature [illegible] a State of [illegible] Alabama a section of [illegible] Florence, to [illegible] [illegible] [illegible]

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, SEPTEMBER 21, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

THE CALIFORNIA FARMER IN BOSTON, MASS.—Copies of the *California Farmer* may always be found at REDDING & Co.'s, State street, Boston.

THE FESTIVAL TOURNAMENT.

SPECIAL NOTICE.

LADIES desirous of competing for the prizes offered by the Agricultual Society, to Lady Equestrians, will apply to either member of the undersigned Committee which has been selected for the approval of snch applications; and no lady will be permitted to contend for the proposed prizes, without the approbation of said Committee—to wit:

JOHN BIGLER, Sacramento.	GEN. J. E. WOOL, Benicia.
JAS. L. ENGLISH, "	C. H. HEDGES, Marysville.
C. UPSON, "	R. CHENERY, San Francisco
S. A. McMEANS, "	A. J. WATSON, San Jose,
W. C. WATERS, "	

By order of the Executive Committee.

C. I. HUTCHINSON, Pres't.

HONOR FOR THE TOURNAMENT.—It is with no ordinary pleasure that we publish the following letter from Gen. Wool. Invitations having been forwarded to Gen. W. and staff, and also a request that he would act as Chairman of the Committea of Awards upon tha lady equestrian performers, the following gratifying response has been received. This we feel confident will be most pleasing to his numerous friends:

BENICIA, California, Sept. 18, 1855.

DEAR SIR: I have the honor to acknowledge the receipt of your kind note of the 10th inst. with its inclosure, and take pleasure in acceding cordially to the wishes of the President and Committee of the State Agricultural Society; and taking, as I do, a great interest in everything which may in any way tend to the improvement of the State, I shall certainly avail myself of the flattering invitation of your President.

I am sir, with great respect,
Your obt. servt.
JOHN E. WOOL,
Major General.

To James L. L. F. Warren, Esq.,
Corr. Sec. State Ag. Society, Sacramento, Cal.

SPECIAL NOTICES OF THE FAIR.—Articles and Stock should be on the ground and in the Hall, on Monday, the 24th. The Hall and Yards are only open to the Committees and Exhibitors, on Tuesday, the 25th—and to the public on Wednesday, the 26th, and continue through the week.

The Equestrian Exercises will occupy Wednesday and Thursday, the 26th and 27th.

The rules and regulations of the Fair will be seen at the Hall and grounds, and these will be strictly adhered to.

Stock with their keepers, and all articles intended for the Exhibition, will be conveyed to and from the Fair *free*.

The Steam Navigation Co., California Stage Co., and the Expresses, having generously came forward to aid in this work.

PRIZES FOR THE FAIR.—The first prize for lady equestrians at the Tournament during the Fair, is now on exhibition at Hiller & Andrews. A fine gold watch and chain, made of California gold and by California workmen, costing one hundred and twenty-five dollars.

The second prize is a splendid "side-saddle," made by R. T. Nelson, K street, costing fifty dollars.

The third prize, a beautiful "silver cup," of the value of twenty-five dollars, made by Hiller & Andrews.

The fourth prize is a handsome "ladies' riding whip," with pearl and gold handle, worth near twenty dollars.

Each prize is worth the winning by any lady, and we hope much pleasure will bo enjoyed in the contest.

ARRIVALS FOR THE FAIR.—Already considerable numbers of stock, in the various classes, have arrived. Every steamer at our levee, brings more or less. Machinery, implements, and designs and works of art, continue to arrive.

Fruit is coming in, and a very general interest is aroused. The work is progressing rapidly, and bids fair to ba an Exhibition that shall do honor to our State.

EXAMPLES OF STOCK.—We are happy to inform our readers, and especially stock raisers, that next week we shall commence a series of descriptive plates of some of the finest stock that has been imported into the United Statss. These representations, alone, will he worth tho price of the FARMER. Stock raisers should secure volumes now.

The State Fair.

BEFORE another issue of our journal, the Hall of the State Fair will be opened, as we confidently hope and trust, to the gaze of admiring thousands.

The "Festival Tournament" we have no doubt will call the attention of the curious, secure the interest of all who seek variety, and demand the hearty co-operation, respect and prompt gallantry of every true gentleman in our State.

The grounds designed for the exhibition of tha Stock of California, will have also received the attention and engaged the interest of those who are so largely interested in this branch of Agriculture.

The Assembly Chamber at the Capitol will be the head quarters—the chief and only place where the Fruits, Flowers, and Grains will be displayed. In this spacious Hall will also be Exhibited, Works of Art, the Genius of the Manufacturer, and the skill of the Mechanic and the Artisan. Here too will be shown all the varied products of home industry, and it cannot be doubted, that many rare and curious fabrics, the work of "fair hands," will make glad the presence of numerous visitors.

Who can tell the influence this Fair will exert upon our State? Let but that just portion of interest be felt by the citizens throughout the State, that the subject demands, and let the citizens of our several counties but truly represent the resources of California abroad, and thousands and tens of thousands of citizens shall come flocking to our shores, and new and happy homes shall glad our bright Pacific coast.

We feel confident that every visitor will be more than repaid for any expenditure they may make of time or means. Every person interested in the prosperity of California should be present, for they will then have presented to them the positive, tangible evidence of the resources of the State at the present day, and from these take pleasing, hopeful and reliable assurance that California is destined to occupy a most enviable position as one of the States of our glorious Union.

It must be gratifying to know that the Executive Committee, who have charge of the exhibition, have made such ample arrangements and of so high a character, in order to secure the hearty co operation of the citizens in this work. No pains or expense has been spared—the most liberal provision has been made in every department to meet the wants of every exhibitor, and to entertain those who shall visit the Exhibition.

The Steamboat Companies have come forward with a commendable spirit, and shown much liberality by an offer to convey stock and articles for exhibition, free of charge. The Express Companies have also been alike liberal in their propositions to convey letters and parcels suitable for their conveyances, and the California Stage Company has joined with the same liberal spirit.

These efforts on the part of the State Society and the generous public spirit on the part of our public conveyances, should be promptly met by a like public spirit among the citizens of California, and we cannot doubt but that this will be the result, for in all our circuit through many of the most populous counties we are happy to know there is being awakened an enthusiasm for the coming Fastival that will fill the city of Sacramento with our fair guests.

Not only will the eye be satisfied with seeing but the ear will be made glad as the mind shall drink in the rich intellectual feasts that will he offered, and when the eye and ear shall have both been feasted, the taste can ba gratified to its full by the rich products of a bounteous, a luxurious harvest.

In addition to the attractions of the Fair, the Railroad being open to a greater distance, it will be gratifying to our citizens to take a pleasant trip in the cars to the beautiful plains beyond the line of our city; and besides all these inducements, we know the Queen City of the Plains, in her present prosperous and proud condition, is worthy a visit for herself alone.

VEGETABLE DRYER.—A discovery has been made by which potatoes, onions, and tomatoes, can be so dried, or rather preserved, that they can be kept for months without sprouting; kept in the most perfect state of preservation without injury to the vegetable, for whale ships or merchant vessels, or even shipment to New York.

All who feel an interest in this invention, and who desire to examine the articles that have been thus preserved, will have an opportunity of so doing at the State Fair, when and where these samples will he exhibited. This is one of the most important discoveries of the age, and its value to California is beyond all price.

A Flying Trip to Sunnyside.

WE have visited the county of Santa Clara twice within the last two weeks—one was the visit of a day or two. We passed down from San Francisco by land, over the San Mateo road, and which, with the exception of a few miles after leaving San Francisco, is as fine a road as man need travel upon. The after part of the day was clear and beautiful, and we rode fast in order to reach San Mateo at early eve and stop at "Depuysters." This hotel is a very fine one and everything is in order and genteel: a place where one would love to tarry, away from the business and care of a city. Mr. Depuyster himself attends to the wants of his visitors and supplies them well.

While at this place we visited the splendid residence of W. D. M. Howard, Esq., whose claim of six miles square has just been confirmed. This is one of the most extensive, picturesque and beautiful estates in all California, and no man has done more for the advancement of the State than this gentleman—none more generous and noble spirited, and therefore none more deserving of such an estate. We hope that a kind Providence may restore him to health again so that he may enjoy his princely domain. Mr. Howard has expended liberally, and his grounds present the appearance of one of those magnificent English Parks, the boast of lords and nobles; but theirs is the work of art, while this of Mr. Howard's is the handiwork of Nature, improved by taste.

From Mr. Howard's we paid a visit to the beautiful grounds of F. W. Macondray, Esq. Here too have been expended liberal means to beautify and adorn. Capt. Macondray is one of the distinguished horticulturists of the Massachusetts Society, and his taste is manifested in his present home—he has stately native trees, fine hedges, well cultivated gardens, conservatory and and ornamental grounds. We were sorry to learn of the disappointment met with in the loss of a splendid crop of grapes, under glass, by blight. Capt. Macondray would have otherwise exhibited grapes of 10 to 15 lb. bunches.

We passed from thence to the Mayfield Farm of E. O. Crosby, Esq. Of these and some twenty places we visited at Santa Clara and San Jose, we have copious notes and shall mention them hereafter.

We are grateful for many acts of courtesy, and kindness at the hands of generous friends, which we shall ever remember.

TO OUR READERS AND CONNESPONDENTS.—We would call the attention of our Agricultural readers to the articles upon "The influence of Agricultural Societies," and the "Reports on Irrigation," copied from the Report of the Mass. Board of Agriculture—these are important themes. Also the State Fair, and its progress, the example of Boston in aid of Agriculture.

Our readers will notice the increase of our correspondence, and we would commend to them most heartily a careful perusal. The beautiful sketch by Alice, "The true aim of life," we esteem a most admirable production, and must reflect honor upon the writer.

Tha "Life Sketch," by Miss Fortune, "Caleb Crusty's Experience," and "Dreaming," by Betty Martin, will each afford much interest to our readers. Our Eastern friends, particularly Bostonians, will find much to interest and gratify them in our Boston correspondence.

We are happy to acknowledge tha reception of MS. copy from Dr. C. F. Winslow, Alice, Helen, and Poetry by '49—all of which will appear early. We feel called upon to acknowledge most sincerely our gratitude to our friends and correspondents for the increased interest toward our journal; such manifestations stimulate us to still greater effort.

We earnestly ask an interest for our journal in every family in the State. We trust the appearance of the paper and the character of the matter presented, will claim an increased share of public interest.

OUR TASTE IS GOOD.—We would like very much that our editorial and bachelor sanctum should be in a little degree professionally supplied with the fruits and good things of this earth, during the week of the Festival Fair, in order that we may pay becoming respect and courtesy to our editorial brethern who shall visit the city, and to whom we extend a true and cordial welcome to our sanctum, and renew the invitation of the Executive of the State Society to visit the Exhibition. We trust our friends in the various sections will not forget us, but send us a sample of their products, specially marked, "For the Editor." Such acts of kindness will be duly recorded.

Boston takes the Lead—$20,000 for the Fair.

WE announce with pride and pleasure the glorious example which Boston has set to all other cities in the Union, in behalf of the Agricultural State Fair, which is to be holden at that city, in the month of October next.

The value of public Agricultural exhibitions has always been fully appreciated in the city of Boston, and in no place in the United States have they ever been gotten up with more splendor than in that city.

So great has been the interest always felt that it would ba considered derogatory for a citizen not to be interested in them. The great gathering of the members of the United States Agricultural Society has been secured to the city of Boston, by that love of public spirit which has always marked her course, and which has made her greatest among the great cities of our land in such enterprise. When this great meeting was announced, the city came forward and granted their public squares amounting to forty acres, with other facilities, for the Fair, and the citizens came forward promptly and subscribed the noble sum of twenty thousand dollars to further this work. What Massachusetts man, what Bostonian, does not feel proud of his State and his city? It is such acts, such public spirit, that has made Boston great; and it is only by such acts that any city can become great.

We feel proud of the city of Sacramento, and we should rejoice in her highest prosperity, believing as we do, that a high and liberal and generous course to great public enterprises would tend greatly to her prosperity. We do most earnestly present the example of Boston at the present time, and hope that immediate measures will be adopted by the city authorities to express their interest in the Great Industrial Exhibition which is near at hand; if Sacramento needs an example nearer home, we call her attention to tha action of her sister city of San Jose, which we publish with much pleasure, and record in addition to the action of the city, that at a public meeting of the friends of Agriculture and of citizens, (which we had the honor to address) a delegation of forty citizens was appointed to attend the Fair in a body.

The city of Marysville has acted, and chosen thirty-five delegates; and we now ask, *what has the city of Sacramento done?* An immediate response should he had.

Shall the authorities of other cities come up to our city, and no attention or courtesy be shown them by our authorities? Shall distinguished strangers visit this city and learn that Sacramento as a city takes no part in this great display of her home products and industry? We trust not. If the authorities refrain from action, we pray our citizens will act—not a day or hour, is to be lost, lest credit and reputation be lost also.

Merchants, traders, hotel keepers, manufacturers, mechanics and laborers, all—all are interested, and all should act.

The Fair of Next Year.

SAN JOSE, Sept. 17th, 1855.

To the Executive Committee of the California State Agricultural Society:

GENTLEMEN: I have the honor to transmit to you a copy of the resolution passed by our City Council this evening, and trust it will meet with your favorable consideration.

Respectfully, yours,
E. P. REED,
Secretary of the Santa Clara Co. Agricultural and Horticultural Society.

Resolved, by the Mayor and Common Council of the city of San Jose:

That in order to advance and bring into general notice the capabilities and resources of our Valley as an Agricultural district, it is hereby

Resolved, That the free use of the City Hall, and grounds sufficient for tha Exhibition of the Annual State Fair, are hereby tendered to the Executiva Committee of tha State Agricultural Society, for their Annual Fair for the year 1856.

Adopted by the Common Council, Sept. 17th, 1855. WM. DANIELS, Pres. pro. tem.

Approved, Sept. 17th, 1855.
S. O. HOUGHTON, Mayor.

I certify the foregoing to be a true copy of a resolution passed by the Common Council, and approved by the Mayor, Sept. 17th, 1855.
E. P. REED, Clerk.

GRAIN AND POTATOES.—Farmers, look to your crops of grain and potatoes; note the steady advance. Be sure you learn the market before you sell—but if you look to your interest, you will try to secure to yourselves and families whatever gain there may he.

OUR AGENT IN SAN JOSE.—Robert Bryant is our Agent at San Jose and Santa Clara, and those indebted to us will please pay him; and we hope many of our friends will call on Mr. Bryant, at Wells, Fargo & Co.'s, and become subscribers.

PACK YOUR FRUIT WELL.—Large quantities of the very best fruit is spoiled before it reaches its place of destination, by reason of poor packing or no packing at all. A very little care and trouble would increase the income of fruit growers very much. We frequently see splendid grapes packed in sawdust, Indian meal, shavings, chips, or even in loose masses. We have seen peaches packed in sawdust, meal, and loose; and splendid apples and pears loose. By this means grapes get mashed and lose their bloom, (which is their handsomest point); peaches lose their beauty and sweetest juices by bruising, and pears and apples, when badly bruised, are worthless, and their real beauty is gone. The very best thing we ever knew for packing fruit is *wilted grass*. In "Yankee land," we call it "rowen." This is soft, does not chafe, bruise or remove the bloom of the fruit. We earnestly hope care will be observed by all contributors who send fruit and other tender skinned products to the Fair; for a little forethought and care will add very much to the beauty of their display and to the general appearance of the whole Exhibition. A single dish of bruised and unsightly fruit would destroy the appearance of a whole table.

TOOL HOUSES.—Provide yourself with a good tool house. Locate it in some convenient place, and whenever you have done using an implement for the season cleanse and house it. Structures of this kind cost but little, and may be made the means of saving a great deal. The exposure of costly farming implements during the winter, is a greater injury to them, as a general thing, than the use of them during the period they are wanted for active service in the field. The corrosion of iron by rusting and the rending and warping of wood by moisture, frost and heat, are evils, the extent of which few appreciate.—*Germantown Telegraph.*

Can any one that is at all familiar with California farming read the above and not see how much this advice is needed. Let any person take a circuit of one hundred miles in any valley in our State and he will meet with implements enough that are exposed to sun and moisture, and that are fast passing away, to amount to many respectable fortunes. No one can have any idea of the recklessness and waste everywhere in this branch of industry until they shall have visited the farming grounds. It is time a reformation should have taken place, for it would save thousands.

NEW BUILDINGS IN SACRAMENTO.—No city in California is more steadily improving or more rapidly rising in wealth and distinction than the city of Sacramento. One particular feature is most prominent—the new and substantial buildings that have been recently erected, or are now erecting, are designed and built by our citizens for their own use. It is no effort at speculation but intended as the permanent improvement of our city, and the enduring residences of merchants whose repeated trials and losses have been overcome by an energy of character and an endurance and fortitude unequalled in mercantile history, and whose success is now so marked as to give them a reputation at home and abroad, that in itself is a source of wealth. There is no city in California that can surpass Sacramento in standing for public or private credit; and the merchants of Sacramento hold an enviable position, their name and credit being beyond question. Among the recent improvements we are in duty bound to notice, is the new and splendid building now erecting upon the corner of J and Third streets, by Messrs. Hiller & Andrews. This spacious edifice will be an honor to the builders and to our city, and it will be a monument to this distinguished firm, of their enterprise and success. It will be recollected that Messrs. Hiller & Andrews have conducted some seven or eight public rattles of rich wares, and in their management have received the public approval and have amassed a fortune. We understand this firm will occupy a portion of this edifice for their own business, and trust that success will continue to crown their public and private enterprises.

WONDERFUL MELONS.—On exhibition this week, at the Society's Rooms: Two Melons, one species of water-meloo, and the other species of musk-melon; yet both were twin melons—one weighing about 35 lbs., the other 25 lbs. We venture to say that no equally curious specimens have yet been exhibited. They were grown by Messrs. Carpied and Point who kindly sent them with great care, to be exhibited.

Dr. T. J. White, of San Francisco, has presented very superior specimens of oranges, grapes and lemons, from the vineyard of Jean Louis Vigne—of which an account will be given in our next.

Our Book Department.

BOSTON, Aug. 20, 1855.

JUST published by John P. Jewett & Co. Boston, "Modern Mysteries, Explained and Exposed, by Rev. A. Mahan, first Pres. of Cleveland University." The book is divided into four parts, and is one of the greatest books of the day. It is one of the most remarkable facts of the time, that the movement known as spiritualism should have made such progress. The physical phenomena, too, which has become connected with this system, has been seen in almost every domestic circle. A solid work on this subject, handling it in a clear and judicious manner, has been much needed. This work goes over the whole field of modern mysteries, and it concludes with an argument for the inspiration of the Bible, and an examination of the Revelations of Swedenburg. A chapter is devoted to the old subject of Animal Magnetism. This volume deals with a subject which is occupying multitudes, who are startled at the extraordinary physical manifestations that fall under their observation, and for want of a better solution, adopt the spirit theory. To such, this volume will be welcome. It is well written, and calculated to attract and interest.

Received from B. P. Johnson, Esq., Albany, the Monthly Journal of the N. Y. State Ag. Society, acknowledging receipt of CALIFORNIA FARMER, for the library of the Society.

From Chas. G. Day, Esq., Sec'y Tompkins Co. Agricultural and Horticultural Society, we have the Premium List and Regulations for 1855. Fair to be held in Utica, Sept. 27th and 28th.

From Lewis G. Morris, Esq., Mount Fordham, Westchester Co. New York, catalogue of Domestic Animals for sale, beautifully illustrated with portraits of Prize Animals.

From H. C. Hanson, Philadelphia, the "Florist and Horticultural Journal," a monthly magazine of Agriculture, Horticulture, Botany, and Chemistry.

The second number of Littell & Co.'s new magaziue, "The Panorama of Life and Literature," has just been received, and it is one of the best magazines of foreign periodical literature, that has ever been projected. It is very highly spoken of, and if the succeeding numbers are as well filled as the first two, the Panorama will have a wide circulation.

Received from G. Sprague, Esq., Cor. Sec. of the Ohio State Ag. Society—Lithograph views of the Fair Grounds at Columbus, Ohio—Fair to be held the 18th, 19th, 20th, and 21st, of September, 1855. Also the Reports of the Society from 1851 to 1854, comprising four neat volumes. Copies have also been received of the above, for the State Agricultural Society.

The August number of the "Magazine of Horticulture," by C. M. Hovey, is before us, with the usual monthly treat, and the valuable Horticultural operations for August. The full doings of the Meetings of the Mass. Hort. Society are always found here. This number contains a description of the country residence of U. H. Hunnewell, Esq., West Needham, and many other valuable remarks.

Ticknor & Fields present to the public, two neat volumes, by William Howitt, called "Land, Labor & Gold," or two years in Victoria, with visits to Sydney and Van Dieman's Land. These are descriptive of a colony of which he has witnessed the early infancy, and the marvelous growth. They are well worth reading, and we would wish to speak at length, but we did not receive them in season, and must defer it till another time.

REMEDIES FOR GRASSHOPPERS.—Some time since a writer in the California Chronicle recommended the castor oil plant as a remedy for grasshoppers, saying they were fond of it, although it was poisonous to them, and that if the leaves were placed around plants to be protected, the grasshoppers would be killed by eating of them. As the writer asserted that he had seen this practiced extensively in Australia, the remedy seemed effectual; but one of our subscribers informs us that he had several castor oil plants in his garden which were untouched by the grasshoppers, while they destroyed everything else. He also mentioned several similar cases, and said that grasshoppers would not eat the castor oil plant, neither will they eat tobacco or watermelon vines. We mention this, that too great reliance may not be placed upon a single remedy, though it is recommended as effectual.

BEATY'S HOTEL, SAN JOSE.—We can most earnestly commend this well-kept Hotel to the public. We have passed pleasant days there. The proprietor devotes himself to the comfort of his guests. Fine, well arranged rooms, clean beds and bedding, a good table, attentions and courtesy, make one feel at home. A fine stable attached to the house, secures visiters an entire comfort. If you visit San Jose, go to Beaty's.

SPECIAL REPORTS OF THE EXHIBITION.—Our paper will be prepared with full and detailed reports of all the articles exhibited at the Fair, and will be most desirable as a permanent record of California, identified with her "home industry." Now is the time to subscribe for the FARMER. Persons desiring it, by leaving their names at the office, will be supplied

RAIN.—The first rain of the season at this place was a slight shower of some five or ten minutes' duration, on Sunday afternoon last. Up to that time no rain had fallen since last May, an unusual dearth. We hear that considerable rain fell at a number of places in the interior, accompanied by some thunder and lightning. The lightning was observed in the east from this city on Sunday evening

EARLY WINTER.—The Sacramento Republican says: "The [illegible] Indians, including Diggers, foretell an early winter and a great quantity of rain. This appears to be the opinion also of a great number of our American residents with whom we have conversed."

[For the California Farmer.]

That Supper!

"A Dream that was not all a Dream."

ALREADY fatigued with a long ride over hill and through valleys, we still pressed on, that we might gain the end of our journey by land, and reach the steamer and there find rest. By hard riding the feat was accomplished, and after the necessary ablutions and change of dress usual after a very dusty ride, we found ourselves in a most luxurious bed in a splendid stateroom of one of the finest steamers that glide the golden waters of the Sacramento.

How long we slept, or how long we dreamed, we have no positive record; but this is a faithful transcript of our DREAM: It seemed like a reality, for the dream commenced with the same long ride we had that day accomplished, and we came down to the same wharf and saw the same steamer, that proud queenlike looking palace the "New World," that sits upon the water "like a thing of life,"—and we remember too, (as we dreamed on,) that we had been but a little time on the steamer after she left her stopping place, before we saw that popular commander Capt. Seymour, who with his usual courtesy and kindness greeted us, and remarking that we looked weary inquired if we had been to supper. Upon our answering that we had but just come on board, after a long, hard ride, without even dinner or supper, the Captain immediately gave orders that we should be most specially cared for. Even now as we remember our dream, it seems more like *reality* than a dream—but we will continue. After a suitable time for the preparation, as we sat in the cabin, in conversation with the Captain and friends, the door opened and the courteous and well known Clerk, Hubbard, Esq., entered, with the Steward, and by a word signified that the supper was ready. Joining the Captain, we proceeded to the lower cabin, and there was spread out *such a supper!*—the "prince of caterers" could not have excelled it—it is so distinct even now, that my *dream?* is fresh as it was the morning after—

> Cloth and napkins pure and white,
> Candelabras with brilliant light,
> With varied dishes, choice and rare,
> And plenty for a kingly fare.

Even in my sleep I could hardly believe my senses, but upon a careful look I noted four covers, and there were but two of us. At a suggestion, we returned to the cabin, and taking two kind friends, we took seats at table, and resolved to have a feast of good things—so varied, so profuse, and so abundant, that my mind was lost in the selection; when turning to the Steward who stood waiting, neatly dressed, with a clean napkin on his arm, we asked for a "Bill of Fare," thinking it was best to commence in the order—when with a very polite bow, the Steward remarked that by the *mistake* of *the printer* the *satin* "Bill of Fare" had been most vexatiously delayed; but he would by permission enumerate as per list—when, commencing, he called: Beef steak, veal cutlet, pork steak, mutton chop, fried fish, ham and eggs, oyster patties, clam patties, omelette, boiled and poached eggs, duck, quail, chicken, with vegetables in abundance, and salads; to these were added pies, custards, jellies, tarts, cakes, fruits, &c. By the time the list was past, I was, as also our friends, busily engaged in dissecting the various dishes. None could be more ready to do ample justice to so bounteous and splendidly arranged board than ourselves. We remember that we *dreamed?* we saw the sparkling champagne and heard the sentiment; wit sparkled like wine, and the hours flew happily by, when at a given signal, that polite and gentlemanly Steward, Miller, Esq., directed the coffee and cigars. Adjourning thence to the quarter deck for a while—thence to the cabin, hours flew by, when from the hand of the same courteous Clerk, Hubbard, Esq., a stateroom key was in our hand, and we turned to our rest, when upon attempting to unlock our door, we—we—woke—and lo and behold! we lay in the same stateroom we have recorded—and our dream was but a daguerreotype of an actual event of some hours before—and Vance, that inestimable Daguerreotypist could not take a more perfect likeness of the human face divine, than was exactly mirrored upon the Dream of the night—of the actual event of that "Recherche Supper," upon the New World, of the night of which we have spoken, when we "Dreamed a Dream that was not all a Dream.

EPICURE

EDITORS FARMER: Allow me, through the medium of your valuable sheet, to say a few words in regard to an art which though not connected with at the present time, I take a deep interest in—that of Photography. During the past week I visited San Francisco for the purpose of seeing the improvements made in this branch of the Fine Arts and was delighted to see so great progress. Photography, since its first introduction into the United States has, I am sorry to say, been used as a medium by which a set of lazy and worthless artists can get an easy living a set of men a short month or two with an artist perhaps as simple as themselves and then launch forth as [illegible] Daguerreans, but who know no more of the business they are in than the mere process of taking a picture, and I see that California has not escaped the infliction. To be a good Daguerrean requires a thorough knowledge of the business, together, with a quick eye and good judgment.

Among the galleries I visited was that of Mr. H. Vance, [illegible] and there I found a true artist, one who knows and takes an interest in the business. I had often heard of Mr. Vance as an excellent artist, but was suprised at the specimens which I saw, among which were several double whole *four times* the size of any in California; also, a large group of 19 persons. I was informed by Mr. Vance that he had the facilities for taking groups of any size, from two to forty, on one plate. I also saw one of the celebrated lily, Victoria Regia, colored and finished equal to the finest engraving. His specimens of Stereoscopes excel any I ever saw, in style and finish; they seem living, almost breathing realities. His portraits are incomparably superior to any I have seen in the State, and at once place him in the front rank as a Daguerrean. They possess all the qualities of the finest steel engravings, surpassing them eminently in tone, softness and in gradation of light and shade. While the highest lights are perfectly preserved, the darkest shadows lose none of their intensity, but are brought out with that sharpness and fullness which gives such beautiful effect to a picture. What pleased us and riveted our attention in the specimens before us, was the beautiful positions—not one was ungracefully *posed;* the drapery was well disposed and all the accessories equally well placed. We predict for Mr. Vance a reputation in this line of art that will realize his highest expectations. We understand that Mr. V. is about to introduce Photographs, or pictures on paper, and hope he will do so, as in this country they are greatly to be desired, on account of sending them by mail to friends at home. OPENATOR.

MINING.—The Calaveras Chronicle of the 15th inst. says; "We continue to receive favorable reports from the principal mining localities. The extraordinary low stage of water in our principal streams permits the indefatigable miner to explore river bottoms with more facility and at less expense than has been hitherto possible. This favorable opportunity is being improved, and many a veteran miner is now testing the accuracy of his own peculiar theory in regard to the existance of fluvial auriferous deposits in particular places. Many of the companies along the banks of the Mokelumne river are receiving handsome rewards for their labor and perseverance; and on the Calaveras, the daily average to each man, equals the liberal wages of 1850.

At San Antonio the claims yielded handsomely—at Corral Hill the same. Favorable reports are given also of Red Hill, Chili Gulch, Campo Seco, Independence, Cave city, and other favorite placer diggings. We are informed by a friend, who desires his name to be withheld, that a company working a claim near his house, have lately found a nugget of gold and quartz, weighing upwards of 17 pounds—the claim still yielding specimens of unusual size.

GREAT FIRE IN GRASS VALLEY.—A most destructive fire broke out at Grass Valley on the 14th inst. The space of ground burned is estimated at from twenty to thirty acres. Number of houses destroyed, 350; total loss, $400000. The loss was greatly increased, from the fact that most of the merchants had just laid in heavy stocks of fall goods. All the hotels, bakeries and every boarding house in the town was destroyed. The materials of the printing offices were saved; also, all the churches. The town has received a severe check, but the citizens are by no means discouraged. Fifteen or twenty temporary places of business are now going up, and measures are in progress for widening and straightening the principal streets, preparatory to the erection of permanent structures.

MINING IN TOULUMNE COUNTY.—The Columbia Clipper states, that the new water ditch from that place to the South Fork of the Stanislaus river, has been completed, and in a short time a large amount of unoccupied mining land will be open to the public, with abundance of water at moderate prices.

A FINE ANIMAL.—Mr. J. Davis, of Humboldt, has a three-year old Durham bull, weighing over 2000 pounds, for which he has been offered $1,500 in cash.

THE vicinity of Humboldt Bay is said to have been lately visited by quite severe frosts.

THE RECIPROCITY TREATY AND THE WHEAT CROP.—The Oswego Times says: 'No class of our citizens will probably derive greater benefits from reciprocal free trade than our farmers. To say nothing of the Canadian wheat crop, the removal of the 20 per cent duty opens to them the finer markets of the St. Lawrence which are frequently better than the Eastern markets of the sea board as has been the case the present season. Most of the flour manufactured here is now being shipped to Montreal and Quebec, their market being better than the New York market. This will not always be the case, but a large portion of the Lower provinces, which [illegible] of their bread stuffs will always give importance to the markets of the St. Lawrence."

CERTIFICATES AND BADGES OF MEMBERSHIP.—Those who desire to become members of the Society and to take part in the [illegible] and who are [illegible] and forward their subscription, and [illegible] send to the Society's Rooms and [illegible] their names and badges. This will [illegible] time to carry on court work properly.

Membership, $10; admission [illegible] lady members of the family to the [illegible] the season. Tickets and [illegible]

Correspondence.

Letters from the Coast Range.—No. 1.

We know it will afford our readers great pleasure to hear that we are to have a series of Letters from the same pen whence emanated those deeply interesting and graphic sketches of the "Mammoth Tree," "Caves of Calaveras," &c., which were published in our journal the last year, and copied so widely. In the Letter which we lay before our readers to-day, we have an inkling of what is in store for us and our readers. Our eye catches the "Geysers" as the chief attraction for the writer; and we feel confident we shall have from his gifted pen a description of these wonders, that will stir the warm blood around the heart. And then too the "scenes in the mountains"—the writer says they collected their "traps for the journey," *prepared* for the deer, elk, and grizzly, as also for the piscatory tribe—and of these sports and dangers we are to hear—the chase of the "swift of foot," the close hug of the grizzly, and those famous nibbles that Ike Walton tells about. But, reader, we will not forestall your pleasure too much; it is enough to say, the Letters of our friend will be most eagerly anticipated and as eagerly sought for; we ourselves anticipate "a feast of fat things:"

Petaluma, Sept. 8, 1855.

Editors Farmer: Last year about this time I jotted you down hastily a few observations and thoughts from the mountains—and this year, as I am strolling up to the Geysers, with my friends S. H. Parker and A. S. Iredale, Esqs., I will fulfill a second promise, and write a few lines, from time to time, if I can find leisure.

We started from San Francisco yesterday morning, at 10 1-2 o'clock—and it happened to be one of the calmest and finest days of the season. Professional occupations had prevented me from undertaking this long desired excursion ever since the first of June; but I must go now if ever this year, as the season is getting late for traveling. So we put up our "traps," and off we started, making a little more preparation for deer, elk and grizzlies, as well as the piscatoral tribes, than I did last year, when the Colonel and Alderman had me in charge, with Jim and Bill on the lead.

Well, it was a heavenly day as we began our journey, and the Bay was like a mirror—not a breeze for once in the way rippled its ample surface. One of the party had made a John the Baptist of himself the day before, for the sake of an extra amount of comfort, and friend Parker and myself, with hearts as calm as the morning, set off to avail ourselves of his previous preparation. The Reindeer did well, but her generous Commander did better, and the boat among other things to gratify us was allowed to pass between The Sisters, to give us an opportunity to observe the geological structure of those interesting little islands, and see the huge flocks of of pelicans and other water birds nesting upon and, swimming around. It was indeed a curious sight. These uncouth birds rose in a vast multitude as we came near them, and wheeled in various directions, scattering and coming together again as soon as we had passed out of their way. A seal was indulging himself in floundering on the surface, and the smaller web-footed birds were on close terms of intimacy with the numerous ugly, long-billed, short-necked creatures that covered the islands in such numbers. The islets are white with guano, and an unpleasant odor is very strong as you pass near them.

The aspects of the landscape on the western boundary of the Bay, as you pass near the coast, is very agreeable; but the whole surface is dry and yellow, which makes the dark foliage of the scattering oaks unusually conspicuous, from the water to the tops of the hills. Sandstone seems to be the formation apparent at all out-croppings, except at Black Point; as we began to ascend Petaluma Creek, a conglomerate of large rounded stones, pebbles and sand was observable in the steep banks of the projecting headland. Here the scenery began to change and become more interesting. A broad delta fills the valley between the Coast Range and the Sonoma dividing ridge, and through this winds the salt creek of Petaluma some twenty-five miles—wide at first, and then becoming much more narrow and still more tortuous until you bring up in the mud at the thriving little town which gives name to the valley. I was pleased with the novelty of the views in various places. The whole valley is filled with a sheet of marsh mud, formed when the mountain ranges were many feet lower than at present, and when elevated above the water, the fresh water from the head of the valley wore its way through, assisted by the rise and fall of the tides, until the present channels have been worn through this uniform and level deposit of marine sediment and sea weeds and salt grass.

The appearance of the Coast Range as we ascended the valley, became more animated with farm houses and agriculture, and I was pleased with the thriving aspect of this whole region around Petaluma. It was nearly dark when we reached this place, but it looks well and is growing rapidly.

The vehicle is ready to leave and I will wind up for the present, and resume another time.

Truly yours, C. F. Winslow.

Our Boston Correspondence.

LETTER NO. 4.

Boston, August 12, 1855.

Editors Farmer: Since my last to you, I have received letters from different sources, upon the crops, &c., in various sections of the country, and which may interest your readers.

Continued accounts are received of the abundance of the crops in all quarters of the country, and it appears beyond doubt, that there never was so much wheat grown in the country before; and it has been and is being gathered into the garner in excellent condition. In Illinois the wheat crop is everything that the farmer could ask, and the whole range of other crops never promised such abundance before. At Alton, in Illinois, the corn "reaches from six to ten feet in hight, each stalk generally bearing two huge ears of corn, as *long as an ax handle*." All accounts from Iowa represent the wheat harvest as a most bountiful one, In Missouri the wheat has all been gathered, and the granaries of the farmers are overflowing. Kentucky is pronounced, "a perfect paradise of plenty." In Wisconsin the yield of wheat will be above the average, and the breadth is greater than in any year before. Notwithstanding the stories of the ravages of the weevil in Michigan, the wheat crop there is likely to turn out very well. Indiana will rank with Illinois and Kentucky, for abundance of everything. The reports are encouraging from all parts of Ohio.

Large quantities of Tennessee and Georgia wheat have found their way into New York. Tennessee having a railway communication with Charleston and Savannah, can send its wheat direct to Atlantic ports, from whence it may be shipped direct to Europe. Over one hundred thousand bushels of this wheat have been sold in New York.

In South Carolina Flour is selling from $5 to $6 a barrel. Corn has already fallen 30 per cent. per bushel in the last few weeks. There were heavy exportations to Northern Markets. The Cotton Crop in Florida is said to be doing well, and promises a heavy yield. The cotton is from six to seven feet in hight, and very well formed.

Nearer home, we find the same results, and every farmer has cause to rejoice. On the "dark plains" in Concord, N. H., may be seen a field of Winter Rye of at least *one hundred and fifty acres*. There are other fields of rye on those plains, amounting in all it is said to about five hundred acres. The crop is very fine and now ready for the harvest. One other crop remains to be mentioned, which is peculiar mostly to Hartford, Ct.,—the Tobacco crop. It is cultivated in small patches of one acre, or two or three, on favored spots, and for its principal use—the making of wrappers for cigars—the material for the filling being from another quarter. It is called the "Connecticut Seed Leaf," and is superior to any other for the purpose. It thrives only in Connecticut and some parts of Ohio. It requires very skillful culture, and still more skill in the curing and packing. With these and a favorable season, it is incredibly remunerative, especially since smokers have become so fastidious as to be willing to pay from *three to seven cents* for cigars. The crop of Hartford county for last year was 6,000 cases of 400 leaves each, and there is no limit to its extension except the frequent disappointments of the cultivator from want of skill and care.

There are now exhibiting at Mr. Allen's Lily House, Salem, several beautiful air plants, among them the Pitcher Plant, and that great natural curiosity the Butterfly Plant, the flowers of which look all ready to fly away. The Lotos Plants are advancing finely, and several flowers are growing up. Mr. Allen has a new Victoria Regia Lily in bloom almost every day.

There was a fine display of Fruits and Flowers at Horticultural Hall this morning, and a large company of both sexes were in attendance, to feast on the tempting display of Fruits and Flowers, but tantalized by the ominous words near each dish of fruit, "touch not, taste not, handle not." Flowers were shown in great variety, by Messrs. Evers & Bock, whose fine display of Pot Plants and Roses was much admired. Phloxes, Balsalms, Roses and Petunias were shown in great profusion, and premiums on Balsalms were awarded as follows: First premium of $3 to Jos. Breck & Son; second, of $2, to James Nugent; third, of $1, to Parker Barnes. Of Phloxes—first premium, of $5, to J. Breck & Son; second, of $4, to Messrs. Hovey & Co.; third, of $3, to Parker Barnes. Of the Fruits, the High bush Blackberry was shown in great profusion. The largest in the collection were shown by J. Nugent, and were the first ever exhibited at the Rooms. From J. T. Allen, Salem, a most rare and tempting display of Grapes, and one dish of mammoth Figs, having burst open with fatness. The display of Vegetables was small, but fair in size and quality.

Col. Marshall P. Wilder, President of the United States Agricultural Society, has made an application to the board of aldermen for the use of a square of vacant land at the South End, of about forty acres, for the purpose of holding a great National Exhibition of the United States Agricultural Society, in October. It is expected to have in connection with the show of Fruits and Flowers, Agricultural Implements, Cattle, &c., a magnificent Horse Exhibition, which shall exceed in extent any ever before made. Boston has guarantied $10,000, through some of its influential citizens, and they say they will have the show. It is expected that a hundred thousand strangers will attend the exhibition. The decision of the Board will be made known in a day or two, and I will then post you up, upon the whole thing.

The season at the White Mountains has been a very busy one this year, and the Hotels have all been filled. It is reported that the largest number of persons met on top of Mount Washington, one day last week, that has ever before convened there at one time. The company consisted of one hundred and thirty persons, representing nearly all the States in the Union, and each of the British provinces in North America. They have a carriage road now building, of which two miles and a half are finished; when it is completed, it will be a very safe and pleasant trip, and thousands will then avail themselves of it, who, now, are prevented by the extreme fatigue of the trip.

The Boston Musical Convention will hold its annual session in the Tremont Temple, next week. The exercises will occupy some eight or nine days, and is open to all who wish to improve themselves in music. The convention was established twenty years since, by a number of gentlemen deeply interested in the general cultivation of music, to afford facilities for musical improvement at a low price, by the combination of rare talent and the aid of the superior facilities which such gatherings afford. The coming session promises to exceed by far that of former years, and many of our best and popular singers have made careful preparation. The conveniences afforded in the new Tremont Temple, and the aid of its magnificent organ will add greatly to the interest of the session.

Messrs. Parker, King & Co., 50 Cornhill, have at their print store, an admirable etching of "Evangeline." She is represented as sitting by the shore, alone, in all the beauty of the "Sunshine of St. Eulalie," before the sadness of disappointment had settled upon her heart. The face is a study for an artist. The work will soon be completed and on sale as above. Messrs. Parker & King have a large collection of choice paintings rare engravings, &c., and they have given free exhibitions all the season, of rare and costly paintings by the most celebrated English painters, their store being the chief resort for all conveniences in that line. They have now on exhibition two fine pictures by Duncan, the celebrated historical painter, entitled, "Prince Charles Edward and the Highlanders entering Edinburgh after the Battle of Preston Pans," and "Prince Charles Edward protected in one of his hiding places by Flora McDonald." Subscriptions are received at their store in Cornhill for the engravings of these and other valuable pictures, and large numbers are subscribed for as soon as the books are opened.

The book publishing trade must be quite flourishing, if we may judge from appearances. A new and handsome sign is very conspicuous over the store of Little, Brown & Co., Washington street, which makes known to the admiring many the names of Shepard, Clark & Co., Booksellers and Publishers. The partners are Charles A. B. Shepard, formerly with the house of John P. Jewett & Co.; Henry A. Clark, formerly with the house of Jenks & Palmer and their successors; and E. C. Walker, son of Samuel A. Walker, Esq., our well known and spirited auctioneer. Being young men, and having a good knowledge of the business, they have commenced with a determination to succeed, and we cannot but wish them success in all their enterprises. They retain the whole premises formerly occupied by Messrs. Phillips, Sampson & Co., and with such predecessors to encourage and stimulate, they have but to remember, "there is no such word as *fail!*"

The largest mail ever received at the Boston Post-office arrived last evening from New York and the South. It weighed *fourteen and a-half tons* and required an extra baggage car for its conveyance. It made six waggon loads and about one third as much more of the same mail was left over in New York, it being impossible to furnish means for its transportation in that train. A large proportion of the matter was Congressional and Department documents.

The Empire City, from Aspinwall, has just arrived at New York, with dates to July 16, and the Pacific mails, and $900,000 in gold dust.

I will continue my correspondence from the West in my next, with other interesting news.

De Quincey.

[For the California Farmer.]

Caleb Crusty's Experience.

Messrs. Editors: In response to your intimation in the Farmer of the 7th inst., soliciting contributions on the subject of "home blessings and comforts," with Essays on Wives, Sisters, &c., and ending with a little soft soap about able writers and so forth, I have come to the conclusion to write you an unvarnished account of the influence of my three sisters on my domestic tranquility, and how they manage to keep me in such perpetual trouble, that I really wish you could get some of your Mormon readers, if you have any, to take the whole off my hands at once, and leave me to find comfort and happines in my own way.

When I came out here in '49, I was poor, but, being a regular down-caster, I knew how to turn my hand to almost anything. So I set to carpenter work; and, though I had never before done anything of the sort, beyond building a fence, or making a hen-coop, I soon found myself a master builder, with some half dozen young lads at work for me. With their assistance I erected more houses in San Francisco than I now recollect; and, in a short time, had scraped together some twenty thousand dollars, over all expenses. The half of this I laid out in purchasing a square league of land, and in '51 went to farming on an extensive scale; and have always managed to keep my own, and something more, and live well and comfortably besides. But I am a working man. I never could find any pleasure in fooling about town, or having lots of idle people fooling about my farm, as they are generally not only of no use themselves, but prevent others, very often, from being so.

Soon after buying my Rancho I wrote to my sisters that, if they chose to come out, I would make them welcome, as I considered we could so manage matters as to make it of mutual advantage to us. My principle reason for this was, because I meant to go extensively into raising of Pigs and Poultry, and believed as they had twenty years' experience in such matters, if they were here, I could manage to make something handsome out of the business, after allowing them to go shares with me in the profits, as a compensation for their labor and attention. I did not mention this when I wrote to them, but merely told them to come out and we could easily settle matters afterwards.

In due time my sisters arrived—Rebecca, Susan and Cecily. At home, that is before they came here, they were all hard-working girls, and being out on the shady side of thirty, and nowise conspicuous for their good looks, I flattered myself that I had made a very prudent arrangement, as they could not only attend to the rearing of domestic animals, but do the cooking and keep every thing nice besides. In fact, so convinced was I of the advantage of having my three sisters along with me in that department of rural economy which I then contemplated as being so profitable, that, after a close calculation, I did not see how it would be possible, after the first year, for our joint gains to be less than four or five thousand dollars. You need not wonder, therefore, if I gave them a hearty welcome on their arrival, and that I assured them that they might depend on their finding in my house a comfortable home. The result I shall let you know next week. Meantime,

I am, &c., Caleb Crusty.

The girl who is destined to be thy wife, although now unknown to thee, is sure to be living somewhere or other. Hope, therefore, that she is quite well, and otherwise think politely about her.

Ladies' Department.

☞ To our Lady Correspondents.—We shall be most happy at all times to receive communications upon every subject touching "home blessings and comforts," the subjects of Education, Domestic Cookery, and Housewifery in all its departments; Essays upon the influence of the Mother, Wife, Daughter and Sister. These all will be most acceptable, and their publication tend to a more enlightened education upon such subjects. Writers can indulge their own feelings either in Poetry or Prose. It is our desire and intention to occupy two or more columns in the "Ladies Department," weekly, and we trust there are many very able writers that only need to *let their light shine* to be known and honored in this land. As our journal is intended as a "Family Paper," we trust this subject may be esteemed worthy those to whom it is addressed

Rural Lays—No. 7.

DREAMING.

"In maiden meditation fancy free,"
Such pleasing day-dreams oft occur to me
While forth I wander, at the close of day,
To weave my wild, unpolished rural lay;
When lengthening shadows mark the sun's decline,
And Nature's harmonies accord with mine.
But when the envious Night shuts out from view
The latest sunlit cloud, of golden hue,
And Sleep, her sister, aids her in the strife
Of robbing half the world of half their life:
When all the flowers their little leaflets close,
And I, like them, have sought her dear repose,
How often, then, comes Fancy with a train
Of phantoms flocking through my youthful brain!
Last night, for instance, scarcely yet asleep,
While Memory still did half her vigil keep,
Methought that Squatter, Rural Tom, and Pike,
(The last of whom I cordially dislike,)
And Forty-nine came "brattling down the brae,"
In such a cheerful, careless, happy way,
I felt, at once, I'd have no easy part
To keep unskathed my tender, truthful heart;
Although, so seldom does such numerous train
Of gallants visit our secluded home,
I need not say, it also made me vain
To think that they on my account had come;
And so, I ran to Uncle to relate
Such wonderful procursor of my fate.
My Uncle laughed, and told me not to be
Afraid of them unnecessarily;
Nor to be vain because that three or four
Aspiring lads and Pike had come a-wooing,
(That "old crab apple rotten at the core!")
And said they soon would stop him from pursuing
His crazy course. So, with a knowing look,
The other gentlemen aside he took;
And then they laughed and talked, and laughed again,
Till I ne'er felt so anxious to obtain
So small a secret; and was wondrous glad
When that ill-used, good-mannered, bashful lad,
Poor Squatter, whom my Uncle liked so well,
Came round to me their cowardly plot to tell.
But when those willful, watchful, wicked three
Discerned that Squatter was informing me,
They raised so loud a laugh, so wild a scream,
That I awoke and found it all a dream.

BETTY MARTIN.

[For the California Farmer.]

SONG OF THE HOPEFUL.

BY MISS FORTUNE.

Nay, tell me not that all is sorrow;
But rather let me hope in vain—
Let fancy picture for the morrow,
Some scene to glad the heart again.

Nay, teach me not to fear the future;
I love to think it may be bright:
We have enough to-day of darkness,
Tell me not of to-morrow's night.

Though storm clouds gather thick and faster,
Yet will I hope they'll clear away,
And, if they crush me not in passing,
Hope for a brighter, better day.

Hope! thou sweet, delusive something,
Ever cheering our dark way;
Oh! I pray thou'lt never leave me,
Thou that art my only stay.

[For the California Farmer.]

A Life Sketch.

BY MISS FORTUNE.

I ONCE had a fair young friend, as gay and light-hearted as the birds of summer, without thought or care for the morrow; the idol and pet at home, and general favorite abroad. When quite young she had a lover who made proposals for her hand, but was rejected by her father, in view of her extreme youth; over which calamity the sweet innocent of thirteen made bitter lamentation. Well, they separated: he went South and she went West. Two years elapsed, and the lover visited her again. This time the father did not object to his addresses; but something went wrong with the lovers. She became impressed with the idea that he had become immoral, (whether right or wrong, I know not,) and from the impulse of the moment, dismissed him without giving him an opportunity for explanation. A year passed, she was introduced to a gentleman (in appearance,) who became another suitor. He was a Methodist by profession, and passed for genuine. She had no fears for his morality, and soon they wedded. They had not been very long married before he showed himself a villian.

Ten years have passed since they were married, and the three are in California. The discarded lover is a flourishing merchant in Sacramento; the discarded husband is a petty grocery man in another city of our State; and the broken-hearted wife is at home again, with her pa and ma, yet young in years but old in experience, and on the brink of the grave. Such is life!

COME BACK.

BY LOTTIE LINWOOD.

Come back! I long to clasp thy hand,
And press my lips to thine,
To hear thy voice in tones of love,
Still answer back to mine.

There is a shadow on the flowers
That traces out thy name,
I yearn for love like thine of yore,
Say, art thou still the same?

I hear sweet words around me, words
Of love and kindly cheer,
That stir the fount of gratitude,
But ah! thou art not here!

And I've a joyful heart to sing,
Life is so dear to me;
But over every glorious thing
Are shadows, love, of thee.

And 'mid the dim soft tracery
That pencils o'er life's track—
My spirit fondly calls for thee—
Come back to me, come back!

[For the California Farmer.]

The True Aim of Life.

To one just entering upon the duties of active life, no question can be more important than—"For what purpose was I created? what is the great object to which my future life should be devoted?" I think this question should be satisfactorily settled before a single step be taken by the young into the untried future. No one should go forth single handed and alone into the broad battle-field of life, without having a just conception of what he is designed to accomplish. And yet how many do, without any definite object in view. Fired with youthful enthusiasm, and impelled by the ardor of their feelings, they take upon themselves the solemn responsibilities, knowing little of the stern reality that awaits them. Momentary success awaits them and may attend their efforts and inspire them with the most glowing hopes for the future; but soon, alas! the dream of their imaginations gives place to the sober convictions of reason; the bubbles that so late amused them vanish, and they find themselves grasped, as it were, by the stern hand of reality. Thus fond hopes are disappointed, and their lives henceforth to them a weary pilgrimage. I would ask why is this? Why is it that so many never realize in the experience of after years all that they had hoped for in youth's early spring-time? I cannot think for a moment that life was given us for amusement or a momentary pastime; and he who has no loftier aim in view than the enjoyment of the passing hour, need not complain if he end his days in bitter disappointment. How low that life, how grovelling it must be, wholly given to present gratification. How it debases the angelic of our divine nature, and elevates the brutal. I know the aim of life must be higher, nobler, more important. Fame is a fickle goddess, a selfish passion, and selfishness its own destroyer. Those who strive most fiercely for the meed of honor, but seldom meet with success. Of all who run the gauntlet of fame, how few are crowned victors. How many of us live for no other end than to buy and sell and *get gain?* Wealth is the great object of the masses that throng the road of life; this is the great object to which they direct their efforts, which they kneel before, like the benighted heathen to their blocks of wood and stone, and offer up their sincerest devotion. But, vain mortals,

Can wealth give happiness? Look around and see
What gay distress! what splendid misery:
Whatever fortune lavishly can pour,
The mind not satisfied calls for more.

How lamentable then to see men like Girard or Astor, devoting every energy of their entire lives to the acquisition of treasures, denying themselves the ordinary comforts of life, and closing their hearts to the most urgent appeals of charity, to leave behind them millions to be squandered by their hopeful heirs and heartless executors. Give me neither poverty nor riches—for my part, I would rather enjoy a country life in my sequested little domicile, far removed from the din, noise, and politics of a city life, than possess all the wealth, pomp and show that such a life might afford. A young wife can fulfil no higher destiny, in my humble opinion, than to leave all she has clung to in years of girlish simplicity, and follow into the untrodden wilderness the husband of her choice. I would ask the young farmer's wife, if she does not think she feels happier in the performance of her household duties, than can the gay fashionable ladies, that, I am sorry to say, infest our fair Pacific's coast—the land of industry and great reward—who are to be seen at nearly every window from the street! pale and languid from a life of inactivity, cooped up in the parlor from early morn till dewy eve, left to admire their costly jewels and weave fantastic patterns of the future, with perhaps not geographical knowledge enough to bound their native State; when they hear the names of Shakespeare, Byron, Franklin, Washington, Daniel Webster, spoken, startle with amazement and think in their untutored minds, they must be all fishermen (like the renowned Isaac Walton), or some great sea captain; their knowledge of books might extend to Mother Goose's Melodies, or the fourth chapter of the new testament. These ladies sit, hourly listening to the heartless flattery of some brainless dandy, who doubtless has not enough of the precious ore, after a sojourn of five or six years in this far off golden sunset land, to pay his laundry or board bill. Where, my dear fashionables, are your aged mothers that taught you those early, industrious habits of domestic duties? If they still live, their hardened palms with honest toil are raised against you as reproof of your negligence. Did they complain of their duties as a wife and a gentle, tender mother? were they not happy in plying the spinning wheel to make the checkered home-made cloth to array your delicate little forms, which is now laid carelessly aside for the glittering silks and rustling satins which probably your husbands toiled early and late with a throbbing brow and aching heart to obtain?

I say, at once remove this spirit of display from your gaudy hearts, and show the husband of your choice you are his helpmate, not his helpless, helpeat, helpdress, heartless wife. Then, how soon will his careworn countenance and downeast looks be exchanged for mirth and cheerfulness; and as he goes whistling at his plow, thinking the while of the steaming dinner that is awaiting him on his return home, prepared (by a long list of useless servants? No, gentle reader,) by his smiling little wife, whose face is wreathing with smiles; with one hand spreading the white linen table-cloth, and with the other rocking the cradle, singing a lively lullaby to a pair of bright eyes that are often peering out and wondering what delays his daddy. What scene then on earth more bright than this? Where are those olden times, those youthful, happy days, when I saw my old mother drawing the long thread of linen from the flaxen distaff? Those days pass in pleasant review before me; those old spinning wheels are all laid aside with the old family loom in the old dusty garret, for the spiders to spin their dusty webs in. How long shall those good old fashions slumber forgotten?

I love the farmer's life! the pure morning air, untarnished by city infections. I love the lowing herds, the green pastures and fields of waving grain, and the sweet warbling of the feathered songsters which like to congregate in that big oak by my window—which come to awake me every morning. I'll tell about a little petit brown bird of mine, so tame as to come and sit and sing a plaintive tune upon the window sill where I am writing. But see there! he's gone—he's flown amid the branches of the broad oak, where his brother songsters greet him by a merry twittering in their tiny throats. Such rural scenes as these will give happiness and harmony to every action, and life will run like a golden thread. Time thus spent will glide pleasantly by and leave behind the consciousness of *duties well performed and days well spent.* Reader, would you secure the true end and aim of life: employ it in the service of your family and mankind; let each one of your household and vicinity know and feel the rays of the sunshine of your helping heart: aim to be useful in your own sphere, however humble or contracted it may be;

Work for some good, be it ever so slowly,
Cherish some flower, be it ever so lowly.

Ladies let your influence, your example, your efforts, all be directed to this end, and your days will be crowned with blessings, and you will descend to your long resting place without a tear—for good deeds will shine as bright on earth as stars on the brow of the evening. For

Every mortal [illegible]
In this active world allotted;
Whether in a high position,
Or a lowly work of art.

More *poco tiempo.*

ALICE.

FAMILY JARS.

Jars of jelly, jars of jam,
Jars of [illegible] and ham,

"A young Chinese lady," says the Gazette de Lyons, "recently passed by a young officer and a servant has just passed through this city to Paris. Her name is Wang-ha-fang, principal French word, and is said to be remarkable for her ability as a [illegible]. She appears to be visiting Paris to see the Universal Exhibition."

Miscellany.

An Incident in the Life of a New York Fireman.

THE following thrilling story, exhibiting the heroism of a New York Fireman, we clip from the New York Tribune. The facts were narrated by an eye witness:

"It was the night of the 17th of March, 1852. A heavy sleet had fallen during the day and the streets were covered with slush and mud. The Spring of that year was very backward and the night to which we refer was quite as cold as any in January. The alarm of "fire" was pealed from the City Hall bell and thence communicated to the various other watch-towers throughout the city. Engines rushed through the muddy streets, the ropes manned as well as though the weather had been pleasant; for changes in season do not retard the fireman in the performance of his duty. Onward they go, the men cheering each other on their way. Arrived at the scene of action, it is found that the house, No. 89 1-2 Bowery, is completely at the mercy of the flames. It is a large double building, and the fire, originating in the lower part, has cut off the retreat of some wretched occupants. The store contains a large quantity of oil and varnish, which feed and give vitality to the flames. The crowd opens as the engines pass through it; there is a moment's preparation, and then the black, snake-like coils of leather hose rise and fall like things of life; hundreds of strong arms man the brakes, and a loud cheer rings out upon the air as the first clear hissing jet of water is brought to bear upon the burning building. Cheer follows cheer as stream after stream shoots against the burning mass, now flying into the socket-holes of fire set in the black face of the house-front, now dashing with a loud shriver against the window-frame and wall, and falling off in broken showers.

Suddenly there was a loud, shrill cry, and the bank of human faces is upturned to a window at which a woman and children are visible. There is an exclamation of despair, for the Hook and Ladder Companies have not yet arrived! It will require time to drag these huge vehicles over such impassable streets, and meantime those wretched people will be consumed, for the flames are now encircling the window-frame at which they stand!

A deafening shout goes forth; the foreman of Atlas Hose Company No. 14 has brought a ladder from an adjoining house. It is placed against the wall and is found to be three feet too short! They roll up a hogshead, on which the ladder is erected, and now it comes within a few inches. There is a rush to see who shall be the first to go to the rescue and the young man whose forethought provided the means has won the place of honor and of danger. A dozen men stand by to sustain the base of the ladder; a shower of water is thrown over the adventurous young man, and he disappears in the smoke and flames. A moment afterward he re-appears, bearing the insensible form of a woman. A prolonged cheer welcomes him, and after depositing his burden in the arms of a brother fireman, he turns to re-ascend. Again he is wrapped in darkness, and again he appears—this time it is a child whom he has saved. The flames and smoke have increased in volume, and the hold of the brave rescuer is wavering and uncertain. It is evident that he has suffered much in his chivalrous discharge of duty, but again he ascends to the rescue, and again he is crowned with success. The mother now blesses the deliverer of both her children.

The firemen now crowd to the base of the ladder. They insist upon some one of their number relieving the heroic youth, who is scarce able to maintain his hold upon the rungs. "No!" he answers, "there is but one more left—I can go once more." And again he ascends. This time it is necessary to keep the water playing incessantly upon the window, for the flames encircle every portion of the wood-work. The fireman is seen at the window; he is evidently calling for some one, but there appears to be no answer. His foot is on the highest rung, and his body leans through the opening, which is flaming in every part. He is seen to grasp at something—to draw an inanimate form through the window—and then to commence the work of descent. But ere he reaches half way his strength is exhausted; he reels for a moment, his hands clutch vainly at the ladder, and he falls into the midst of his comrades. Fortunately this was anticipated, and the rescuer and his charge are safely caught by those below.

The name of this brave man is Jas. R. Mount. He is still a fireman of the engine on which he served that night, and is the object of the general esteem of the Department. The Common Council paid a tribute to his heroism by presenting him with a handsome service of plate, which his immediate friends made him a present of in the shape of a [illegible] trumpet.

THE LAST OF D[illegible]—[illegible] lecturer in New York has been endeavoring to raise the wind by an [illegible] appeal to the vanity of country [illegible] with considerable success, probably. He addressed a letter signed A. D. [illegible] saying that he was a [illegible] of a wrinkly old [illegible] chapel, and having heard [illegible] great, and seen a bust of [illegible] in which your name is mentioned by the sculptor with great praise, would you possibly favor a poor [illegible] with your autograph, accompanied by a [illegible] It is added in a [illegible] postscript, [illegible] [illegible] the name of [illegible] in the [illegible] [illegible] I will [illegible] [illegible] dollar and a half on [illegible]." Dr. [illegible] Mr. Cornelius would be amused.

NEWFOUNDLAND TELEGRAPH ENTERPRISE.—We hear that the company who are about to connect Newfoundland with Halifax, by a submarine telegraph, propose to furnish the foreign news to the American press in anticipation of the arrival of the steamers, for the sum of about $200,000 per annum, or $2000 per steamer, calculating that they shall anticipate the arrival of about one hundred steamers a year. The news by the steamer bound to New York could be anticipated several days; and by that to Halifax ten or eleven hours. The cost of the Halifax dispatch of foreign news, received once a fortnight, is not probably much under $30,000 per annum.

THE office of the Trinity Times, we regret to learn, was a common sufferer in the general calamity which befel the people of Weaverville. By the exertions of friends, the press was saved with slight damage—loss $600.

THE prohibitory liquor law has undoubtedly been defeated at the late election.

MARRIED.

On the 15th Sept., in this city, by Rev. Mr. Shuck, George J. Lytle and Miss Mary Smith.

On the 13th Sept., in Sonora, by Judge L. Quint, Mr. John Hales and Miss Mary Trengrove.

On the 9th Sept., in Jamestown, by Rev. Isaac Fish, B. E. Goode and Mrs. Rachel Jennings.

DIED.

On the 17th Sept., in this city, Franklin R. Norton, aged 24 years, formerly of Homer, N. Y.

On the 10th Sept., by accidental drowning, while crossing Trinity river, Thos. Kessler, aged 25 years, formerly of Fremont, Ohio.

SPECIAL NOTICES.

☞ **California State Agricultural Society's Rooms.**—The Rooms of the State Agricultural Society are located on Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred specimens in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted,) and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to farther any interest connected with agriculture.

By order of the Executive Committee.
v3-26 C. I. HUTCHINSON, President,

☞ **Peruvian Febrifuge.**—The formula for this preparation is the result of practical observation and experience for a number of years, in the treatment and cure of Fever and Ague, and such has been the uniform success in its use, that no case is known where this valuable remedy failed to cure when timely administered. A single trial will afford relief, and a few doses convince the patient that he has found the real "El Dorado" of a permanent cure for Fever and Ague and the various other grades of Fevers.

Agents—HENRY JOHNSON & CO.,
v4-9 1m 146 Washington street, San Francisco.

☞ **Ex-Alderman Parkins sends us the following,** in favor of WISTAR'S BALSAM OF WILD CHERRY:

BOSTON, Feb 3, 1851.

Dr. S. W. Fowle: Dear Sir—For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me for business. I had taken but a small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful. I attribute this entirely to the good effects of your Wild Cherry, as I took no other medicine whatever. I cordially recommend it to all my friends. Respectfully yours,

v4-11 SAML. S. PERKINS.

MISCELLANEOUS.

To Farmers and all others interested in Agriculture, Horticulture &c.

WILL be published, in October, 1855,
The Year Book of Agriculture;
on.
The Annual of Agricultural Progress and Discovery, for 1855.

Exhibiting the most important discoveries and improvements in Agricultural Mechanics, Agricultural and Horticultural Botany, Agricultural and Economic Geology, Agricultural Zoology, Materealogy, etc.; together with Statistics of American Growth and Production, a List of Recent Agricultural Publications, Agricultural Patents, with notes by the Editor, on the Progress of American and Foreign Agriculture, for the year 1855. By DAVID A. WELLS, A. M., member of the Boston Society of Natural History, formerly Chemist to the Ohio State Board of Agriculture; Editor of the Annual of Scientific Discovery, Familiar Science, &c., &c.

It is evident that a publication of this character, giving a complete and condensed view of the Progress of every Department of Agricultural Science, free from technical and unnecessary scientific descriptions, and systematically arranged so as to present at one view all recent Agricultural Facts, Discoveries, Theories and Applications, must be a most acceptable volume to every one interested in the Cultivation of the Soil, or the Diffusion of Useful Knowledge.

The "Year Book of Agriculture" will be published in a handsome octavo volume, comprising upwards of 300 pages, and will contain an elegant Steel Portrait of an agriculturist, together with fine Illustrations of New Agricultural Machines, Stock, Fruit, &c., together with a series of *beautifully colored engravings.* Although the publication of this work will be attended with very heavy expenses, it will be issued at the low price of $1 50, thereby enabling every Farmer and Planter to possess a copy.

On receipt of the published price it will be sent free by mail, to any part of the United States. As the sale will be large, all orders should be sent immediately.

A liberal reduction to clubs.

S. P. Ruggles' Power Press Manufacturing Co.

[Incorporated February 8, 1854.]

THE above named company having purchased of the well known inventor, S. P. Ruggles, Esq., his Patents connected with the Printing Business, are now manufacturing under Mr. Ruggles' immediate superintendence, the following machines, viz.:

	Size of Form in Inches.
Half Sheet Combination Engine	18 by 12
Quarto Sheet Combination Engine	12½ by 9
Half Sheet Cup Job Rotary	10½ by 7¼
Card and Bill Head Rotary	7 by 4½
Diamond Rotary Card Press	4½ by 3
Circular and Hat-tip Hand Press	8 by 6
Embossing Press	18 by 10
Cast Iron Imposing Table	26 by 22
Shaving Machine, shaves	27 by 16
Paper Cutter	cuts 27
Card Cutter, improved	cuts 25
Bookbinders' Rotary Shears	cuts 25
" " larger size, in proportion.	

These presses are considered by the Job Printers as the best adapted to their wants of any machines ever manufactured.

All orders addressed to their agent, M. B. BIGELOW, 152 Washington street, Boston, Mass., will be promptly attended to.

Mr. Ruggles has also sold to the CUTTING MACHINE MANUFACTURING CO., his Patent ROTATING SHEARS, for cutting sheet tin, iron, copper, brass, zinc, steel, nail rod boiler plates, and all other metallic sheets. This is entirely a new process for cutting metals, and is destined to supersede all other machines for that purpose.

ANSON HARDY, Agent,
152 Washington street, Boston.

And to third company, called the BOSTON HAND STAMP CO., he has sold his patent for a very ingenious Flexible Hand Stamp, whereby perfect impressions may be made at the rate of sixty per minute, the die adapting itself to the surface to be printed on. A very convenient article for all business men.

v4-12 B. M. BIGELOW, Agent, Boston.

White Sulphur Springs, Napa Valley.

THE White Sulphur Springs are situated seventeen miles from Napa City, is one of the most beautiful and retired localities in the Valley. The proprietors have this season enlarged their premises, and are now fully prepared, with *Hotel and Bath Rooms,*

To accommodate invalids and transient guests. The celebrity which these Warm Sulphur Springs have acquired in the cure of Cutaneous Diseases, and obstinate forms of Rheumatism, have rendered them a popular resort for invalids from all parts of the State, and the united testimony of the Medical Profession has been warmly expressed in their favor.

The Springs possess, besides, the advantages of a "Pleasant Retreat," with ample resources for amusement and recreation, and are easily accessible from San Francisco by daily steamboat communication to Napa City.

HOTELS.

MURRAY'S WESTERN HOUSE,
AND
General Office of the California Stage Company.
Corner of Second and D streets,.....MARYSVILLE.

☞ Open all Night.

THIS superb first-class Hotel is by far the most capacious and elegant one in California, out of San Francisco, and is excelled by none in that city. It is of brick, perfectly fire-proof, four stories high, and fronts 103 feet on Second street, and 80 feet on D street. Two hundred persons can be accommodated with entire ease, and in the most comfortable style. Particular attention is paid to the wants and comforts of Families.

Its location is central, and is the General Depot of Staging and Steamboating.

Travelers can rely upon being *called in time* for any boat or stage leaving the city.

Those who desire, can entrust their TREASURE and BAGGAGE to the proprietor in person, who is the sole manager of the establishment, and who will be responsible for the same.

Rates of Charges.

Board without lodging, per week.....$12 00
do with lodging, per week.....$15 to $20 00
do without lodging, per day.....$2 50
do with lodging, per day.....$3 25 to $4 00
Lodging, 75 cts., $1 and $2 per night.

v4-6 R. J. MURRAY, Sole Proprietor.

Orleans Hotel,
Second, between J and K streets, Sacramento.

THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.

The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.

The Table will be found at all times supplied with the choice of the market.

At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.

The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.

The Bar will be supplied with the best Liquors and Wines.

The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.

We have also leased the large brick building corner of and K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.

The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.

v3-2 HARDENBURGH & CORSE, Proprietors.

American Hotel, Benicia.

THIS HOUSE has been established *Five Years*, without interruption or change of proprietorship, and is believed by the traveling public to be one of the best conducted Hotels in the State.

Large and well ventilated, and hand-somely furnished rooms, for families travelling or for permanent boarders, can always be obtained.

A *LIVERY STABLE* is connected with the Hotel, so that travelers can have their choice, either to take the steamers and stages, or a private carriage, to any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.

The daily papers from various sections of the State are on file at this Hotel. Everything will be done by the proprietor that the patrons of this House may find their stay pleasant and satisfactory.

3v-16 1st l C. M. DAVIS, Proprietor.

Merchants' Hotel,
Fire Proof Brick Building,
No. 60 K street, between Second and Third, Sacramento.
J. PEASLEY.....PROPRIETOR

THIS House is the most central location in the city, and but a short distance from the Steamboat Landing.

General Opposition Stage Office.

Stages leave this House every morning for all parts of the Mines.

☞ The best accommodation can be extended to Families, at the most reasonable prices.

Meals.....50c. | Lodging.....50c.

v4-11-2t

International Hotel.

THE extensive addition to this Hotel is now finished and ready for reception, making altogether *one hundred and fifty rooms.* Suites of rooms for families, furnished or unfurnished; also, single rooms to let on reasonable terms.

Day Board—Ten Dollars per week.

This spacious Hall—85 by 35 feet—is elegantly furnished and lighted with gas, with Supper Room that will seat two hundred and fifty, will be let on reasonable terms for Balls, Concerts, Dinner Parties, &c. PECK & FISHER.

San Francisco, Jan. 9, 1855. v4-7

Rassette House.
SAN FRANCISCO,.....CAL.

THIS HOTEL offers inducements to persons visiting San Francisco, unequalled by any on the Pacific Coast.

Gentlemen can be accommodated with single rooms, or families with suites of rooms.

The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. v4-1

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the offal wealth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern Machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekins, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between First and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left with WARREN & SON, Sacramento, will be attended to.

The following certificate is among the number received; others can be referred to in quantities:

"This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing Grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
v4-9 3m Fine street, San Francisco."

Benicia Iron Works.

STEAM ENGINE, BOILER AND MACHINE SHOP.—This establishment is now in successful operation, and offers to the public facilities equal to any in the United State, for manufacturing or repairing Steam Engines of the largest size, Boiler Wares, Brass Casting, Mill Gearing of the most approved patterns, Bloom Iron, Cast Iron Columns, Window Caps or entire fronts.

Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State.

The company have extended their Pier, and erected a large crane for the accommodation of their customers.

PRINCE'S PROTEAN FOUNTAIN PEN.
[PATENTED JAN. 23, 1855.]
T. G. Stearns, General Agent, 271 Broadway,
Corner of Chambers street, N. Y.

ADVANTAGES.—An incorrodible and durable Ink reservoir, made of Protean, under Goodyear's Patent, filled with ease and rapidity, supplying the pen for six or eight hours, and saving about one-third of the time. A Gold Pen of the very best quality, with a holder of the most beautiful, light, and elastic material. Its structure is simple, and not liable to get out of order.

DIRECTIONS.—To fill the reservoir with the Piston, remove the cap by turning it like a screw, insert the pen in the ink half an inch or more, draw up the piston, then with the thumb and finger on the lower part of the piston, draw it up tight into the head of the tube that it may neither move nor allow any pressure of the air. Wipe the pen with a soft cloth or paper after filling and whenever the cap is removed. The piston is not to be pushed down until the ink is entirely exhausted. To push it down place the thumb and the finger just above the tube, that the piston may not be broken. Put the cap on light ly when the pen is not in use, to preserve the ink from drying; and screw it home to its shoulder when carried in the pocket.

To fill the reservoir by suction, (the mode adapted to pocket pens,) loosen the small screw, at the upper end, but do not take it out; insert the pen in ink, as above; apply the lips to the small screw, exhaust the air by suction, and while the pen remains in the ink, turn the screw until it is tight. Or, loosen the screw, insert the tube in a bottle of ink, let it remain until the ink has found its level in the tube, then turn the screw until it is tight, and the pen is ready for use.

The suction pens should be carried in the pocket with the cap upwards, the piston pens with the cap downwards.

Use good ink, free from sediment; Headley & Field's American Fluid, also Bryan & Wilcox's, and Arnold's Fluid Ink, recommended to the public, as they will copy. v4-53m

SANDS' SARSAPARILLA,
IN QUART BOTTLES.
For Purifying the Blood, and for the Cure of
Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt-Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Consumption, Female Complaints, Loss of Appetite, General Debility, &c., &c., &c.

IN this preparation all the restorative properties of the root are concentrated in their utmost strength and efficacy; but while Sarsaparilla Root forms an important part of its combination, it is, at the same time, compounded with other vegetable remedies of great power, and it is in the peculiar combination and scientific manner of its preparation, that its remarkable success in the cure of disease depends. It acts simultaneously upon the *stomach*, the *circulation* and the *bowels*; and thus three processes, which are ordinarily the result of the three different kinds of medicine, are carried on at the same time, through the instrumentality of *this one* remedial agent which gently stimulates while it disinfects and expels from the stomach and bowels all that is irritating, and at the same time restores their vigor and tone. Many other preparations imitate it in bearing the name of Sarsaparilla, and in that their resemblance ends, being often prepared from worthless and inert roots, and of course possess no healing or curative properties, and patients in making choice of which they will use should take no other, but that one entitled to their confidence, from the first list of cures it has effected on living witnesses, whose testimonials and residence have been published, and who are still bearing daily testimony to its worth.

Astonishing Cure.
PATTERSON, N. Y., July 20, 1851.

Messrs. A. B. & D. SANDS: Gentlemen,—Having witnessed the most beneficial effects from the use of your Sarsaparilla, it gives me pleasure to send you the following statement in regard to my son. In the spring of 1848 he took a severe cold, and after eight weeks of severe suffering, the disease settled in his leg and foot, which soon swelled to the utmost. The swelling was lanced by his physician, and discharged most profusely; after that no less than eleven ulcers formed on the leg and foot at one time. We had five different physicians, but none relieved him much; and the last winter found him so emaciated and low that he was unable to leave his bed, suffering the most excruciating pain. During this time the bone had become so much affected that piece after piece came out, of which he has now more than twenty-five preserved in a bottle, varying from one-half to one and a half inches in length. We had given up all hopes of his recovery, but at this time we were induced to try your Sarsaparilla, and with its use his health and appetite began immediately to improve, and so rapid was the change that less than a dozen bottles effected a perfect cure.

With gratitude, I remain truly yours,
DARIUS BALLARD.

We the undersigned, neighbors of Mr. Ballard, cheerfully subscribe to the facts of the above statement.

Varieties.

JAPANESE BEVERAGE.—James Keenan, in an interesting letter about Japan, says that "sacie," the principle drink of the country, is supposed to consist of sour whiskey, tobacco juice and aqua-fortis.

DURING the May anniversaries in New York, the following dialogue was overheard between two newsboys: "I say, Jim, what's the meaning of so many ministers being here all together?" "Why," answered Jim, scornfully, "they always meets here once a year to exchange sermons with each other."

MUTUAL COMPLIMENTS.—Smith and Brown, running opposite ways round the corner, struck each other. "O, dear," said Smith, "how you make my head ring." "That's a sign it is hollow," said B. "Don't yours ring?" said Smith. "No." "That's a sign it's cracked," replied his friend.

A short time since, some young men, going from Columbus to Cincinnati, Ohio, in the cars, were getting rather noisy and profane, when a gentleman in a white cravat tapped one of them on the shoulder, with the remark: "Young man, do you know you are on the road to perdition?" "That's just my luck; I took a ticket for Cincinnati, and I've got on the wrong train."

A bickering pair of Quakers were lately heard in a high controversy, the husband exclaiming: "I am determined to have one quiet week with thee!" "But how wilt thou be able to get it?" said the taunting spouse, in "reiteration," which married ladies so provokingly indulge in. "I will keep thee a week after thou art dead," was the Quaker's rejoinder.

IT is not good to speak evil of all whom we know bad; it is worse to judge evil of any who may prove good. To speak ill upon knowledge shows a want of charity; to speak ill upon suspicion, shows a want of honesty. I will not speak so bad as I know of many; I will not speak worse than I know of any. To know evil of others and not speak it, is sometimes discretion; to speak evil of others and not know it, is always dishonesty. He may be evil himself, who speaks good of others upon knowledge; but he can never be good himself who speaks evil of others upon suspicion.

THE CAMBRIDGE ELM.—Some public spirited citizens of Cambridge have lately erected around the large elm tree in Harvard square, a substantial granite base, on which to place an iron fence, for the protection of that noble tree. Within the inclosure has been placed a relic of antiquity—which has recently come to light—a stone slab, on which is incribed "Boston 8 miles—1734." This slab must have been marked then, to show the distance from Cambridge to Boston through Brighton and Roxbury; this being the route usually traveled at that time, unless the ferry was used.—*Cambridge Chronicle.*

UPRIGHT MEN.—We love upright men. Pull them this way and the other, and they only bend, but never break. Trip them down, and in a trice they are on their feet again. Bury them in the mud, and in an hour they would be out and bright. You cannot keep them down—you cannot destroy them. They are the salt of the earth. Who but they start any noble project? They build our cities, whiten the ocean with their sails, and blacken the heavens with the smoke of their cars. Look to them, young men, and catch the spark of their energy; and when you feel the blood warm in your hearts at the thought of some noble purpose, do not let its flow be checked, even though the world be ever so censorious or misjudging; and though you may have seen many a brave heart lacerated at the world's heartlessness, falter not but press on—try the steep pass: up, up its rugged summit, and you shall attain its highest station.

THE
CALIFORNIA FARMER,
And Journal of Useful Sciences,

Published every Friday Morning, at the Office on Fourth street, Sacramento City.

THIS Journal will contain Valuable Agricultural Statistics, from all parts of the States, together with Original Scientific and Literary articles. The aim of the proprietors will be to make it an acceptable FAMILY PAPER, containing interesting matter relative to Household Literature, from several able lady correspondents.

To those who desire to make known the *real condition of California*, so as to induce kindred friends to come and settle in our State, the FARMER will be found to be very a valuable paper for mailing to the States.

WARREN & SON.

P. S.—Advertisers will please look to our notice in another column. v4-9

New Invention!
Now, Count Your Chickens?!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls.

After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from *four to five hundred eggs* can be converted daily into young Chickens, Ducks, Goslings or Turkeys. After the first brood, &c., nineteen or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some $2 50 to $3 every twenty days.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco. JOHN J. FULTON,
v3 26 Third street, South Beach, near South Park.

Oil! Oil!! Camphene.!!!

BRANCH of the Pacific Oil and Camphene Works in Sacramento.

The undersigned respectfully informs his friends and customers that he has established a depot at **51 K street**, Sacramento for the sale of Oil, Camphene, &c., and invites the attention of dealers to his stock, which consists of Polar, Sperm, Lard, Elephant, Neat's Foot, Tanners', Black Fish, and Machinery Oil, Camphene, Turpentine and Alcohol, which he warrants pure quality.

The facilities which his extensive works afford, will enable him to keep on hand a large stock, and supply dealers at San Francisco prices. [v4-1] WILLIAM BAILEY.

PERUVIAN FEBRIFUGE,
FOR THE PREVENTION AND CURE OF
FEVER AND AGUE,

Intermittent and Remittent Fevers, Liver Complaints, Jaundice, Dumb Ague, Dyspepsia, Nervous Headache, Enlargement of the Spleen, and all the different forms of Bilious Diseases.

THIS preparation is intended especially as a remedy for the prevention and cure of Fever and Ague, but it is equally adapted to other forms of disease, such as bilious, intermittent and remitteot fevers, dumb ague, &c. Its combination being entirely new, it differs widely in its therapeutic effects and operation on the system, from other preparations designed to remove the disease; and such has been the uniform success in its administration, that no case is known where it has failed to cure when timely taken. A single teaspoonful will often prevent an attack of chills and fever; and while operating so effectually as a palliative, its permanency is equally reliable, and no fears need be entertained of any injury resulting from its use, as its component parts are all vegetable, and have been thoroughly tested by many eminent physicians with the most signal success. In all climates where bilious and remittent fevers prevail, this remedy will be found invaluable, and no person traveling through, or residing in infected districts, should be without it.

Read the following Testimony.

BROOKLYN, N. Y., Aug. 25, 1853.

Messrs. A. B. & D. SANDS—Gentlemen: Having been the past year severely afflicted with Fever and Ague, and living in a district where I have been constantly exposed to repeated attacks, I tried the most approved remedies for the cure of the complaint, and among them took four bottles of India Cholagogue, without producing anything but a partial relief. By the advice of a friend, I was induced to try the Peruvian Febrifuge and am happy to say the very first dose did me much good, and less than one bottle entirely broke up the chills, restored my appetite, regulated my bowels, and effected an entire cure. It also cured one of my children, affected the same as myself, and I have enough left to cure two or three more. A desire to relieve those suffering, as I have done, alone induces me to make the above statement. Yours, very truly,
EDWARD MEHER.

Price $1 50 per bottle. Prepared and sold, wholesale and retail, by A. B. & D. SANDS, Druggists and Chemists, No. 100 Fulton street, corner of William, New York. Sold also by Druggists generally.

Cooper's Eye, Ear and Orthopredic Infirmary,
San Francisco.
No. 14 Sansome street, near the Rassette House.

PATIENTS laboring under Disease of the Eye, the Ear, and those afflicted with all varieties of deformities, resorting to this Institution, will find at once a home, where Miners as well as others can be accommodated with board and comfortable rooms, in plain or costly style, according to their taste.

Dr. Cooper has visited all the important hospitals in Europe, for the purpose of extending his knowledge of medicine and surgery, and will give the Infirmary his immediate supervision.

N. B.—All Surgical Operations free to patients who present themselves at the *clinic* on Wednesdays and Saturdays.

For particulars apply to DR. E. S. COOPER, at the Infirmary. v4-10 3m.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laennec and other pathologists." DR. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It Is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emblazoning falsehoods.

The Remedy which we offer
Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of
Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis. Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

DR. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Confirmed Consumption had taken place, the Wild Cherry effected a cure.

DR. A. H. MACANAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. WM. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity.

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry.

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful.

[From the Boston Journal.]
Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most disheartening malady. C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr Wistar's Balsam of Wild Cherry.
Signed I. BUTTS on the wrapper.

San Francisco ahead of the World!

Ever on, on apace with the Age and Times!!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass,)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE'S who wishe PERFECT LIKENESSES? Because he has now the best arranged Gallery on the Pacific Coast, and not to be surpassed by any in the world. Instruments containing lenses more perfect, and with greater power than any ever before used in this country.

2d. Because he has *the largest light in the world*, from which he can form three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely: In order to obtain perfect likenesses, different formed features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All those wishing perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

☞ Prices as reasonable, and work superior to any in the city.

Don't forget the place.

☞ New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. v4-1

New Patent
Force and Lifting Pump and Fire Engine Combined.

THE undersigned is now manufacturing and has for sale a NEW PATENT PUMP, which, for utility and power, surpasses anything of the kind ever offered to the public.

For Ships, Railroad Stations, Paper Mills, Factories, and all other places where a large quantity of water is required to be raised, they are peculiarly adapted.

Its construction is double acting, throwing a continuous stream of water, at the rate of from 200 to 400 gallons per minute, (according to size) and can be used as a LIFTING or FORCE PUMP, and by the application of Hose can be operated as a FireEngine of the most efficient kind.

It is simple, not liable to get out of order, can be operated by hand, steam or water power, and need only be seen to be appreciated.
N. HUNT,
26 Devonshire street, New York.

Also for sale—Best quality of LEATER BELTING and superior SHUTTLE SEWING MACHINES.

☞ Orders for the above received at this office. v4-3 3m.

Saddlers, Attention!

CHAS. R. SCHEUNER respectfully informs the manufacturers of Saddles that he is now prepared to do all kinds of stampings on Californian and Mexican styles of saddles, and he is confident that his style of workmanship cannot be surpassed in this State.

Please call and examine specimens.

☞ Orders from the country promptly attended to.

Improvement of Stock.

No one subject of more importance to California in her Agricultural interests, if we except Grains, than the subject of Stock raising, and the improvement of each and all classes of it.

For this reason we shall take pains to present, often, sketches of Stock Farms, Letters from Stock Raisers, giving their varied plans and successes—and we shall present *Engravings* of the very finest stock imported into the country, that it may serve to give our stock raisers a view of the animals themselves, and thus enable those who are not familiar with the good points, to ascertain and learn them.

We have made arrangements to have cuts and engravings of all the best animals imported into the United States. We have received several engravings already, and shall begin with this number to offer them. The space they occupy, with the details, prevent our offering but one each week; but we trust sufficient interest will be awakened to this subject to aid us in the enterprise, so that we may enlarge by a cover with many plates. An increased favor will induce us to increased exertions.

[From the American Agriculturist of Aug. 13, 1854.]

Farm and Stock of Mr. Jonathan Thorne.

This farm is in the town of Washington, Dutchess county, N. Y., 14 miles back from Poughkeepsie, and about 80 miles in a direct line north of the city of New York. Altogether Mr. Thorne possesses over 600 acres; of which the homestead known under the appropriate name of Thornedale, contains 360 acres. This lies in the form of a parallelogram, whose surface is beautifully diversified by large smooth rolling hills, with a rich valley between. Through this meanders a clear rivulet, spreading out into a pretty lake in front of the mansion, then leaping by a little fall into the broad green meadows below, it steals off quietly into the thick-matted grass.

The soil of this farm is fertile throughout, and well adapted to grazing, to which purpose it is at present more particularly devoted. Mr. T. inherited this property from his father, the estate having been first purchased by his great grandfather. It has been under his immediate supervision only a few years, however, during which time he has made great improvements.

The most attractive feature here is the improved stock, which Mr. Thorne has imported from time to time from England, more particularly the past year, and at a cost hitherto unparalled in this country. Some have made rather invidious remarks upon this great outlay; but it strikes us they do not take that broad and comprehensive view of the enterprise which it merits. Mr. T. is in possession of ample means; he has great taste for fine stock; he wants something to interest and occupy himself and sons in their retirement on the farm; why should he not, then, devote a part of his attention to breeding and rearing choice animals? If he derives no immediate pecuniary profit from it himself, he will have the gratification of having done his country a great benefit by his outlays; and the farmers of the United States will reap a rich reward for his exertions even if he does not. Reflect, then, what a mere trifle the high prices he has paid has given both at home and abroad to improved stock breeding. This, alone, is a vast benefit to Great Britain and America—worth to either country a hundred times the amount Mr. Thorne has expended. The fame of these transactions has spread throughout the United States and over half Europe; and we will venture to say, has done more to call attention to improvements in domestic animals, than any thing which has occurred in Great Britain for a long time. Besides, to take a more narrow view of the question, how much better for society to spend money in this way than in sumptuous feasts and dresses, costly equipage and furniture, and a thousand other things in which the wealthy indulge without a thought of regret? Away, then, with the sordid idea that a gentleman of abundant means may not employ a small portion of them in the improvement of his land, and above all that of the domestic associates surrounding him—for *associates* his animals really are to every humane man. Many of the most refined and highly-educated gentlemen of Europe devote their particular attention to the improvement of their estates and domestic animals, and are honored in so doing. Why should not this be the same in America, where the land-holders and those employed on it, and their families, embrace perhaps three-fourths of the wealth and population of the country? But enough on this subject.

DUKE OF GLOSTER.

SHORT-HORN CATTLE.—Of these Mr. Thorne has a large herd. He began their importation several years since. The most renowned of these, however, were selected for him last summer by Mr. F. M. Rotch, of Otsego, who went out to England, with a son of Mr. T., for this express purpose. Mr. R. was well prepared to execute the commission before starting, by a previous careful study of animal anatomy and physiology, and considerable practical knowledge at the same time, of breeding.

Of the animals selected by Mr. Rotch, Grand Duke (10,284.) stands at the head of the list. His color is a deep, rich red, interspersed with a few small spots of white in the lower part of his body. He was calved February, 1848, and bred by the late Mr. Thomas Bates, of Yorkshire, England. He is by 2d Cleveland Lad (3,408.) dam Duchess 55th, by 4th Duke of Northumberland (3,649.) With the exception of the Duke of Northumberland (1,940.) whom we saw in Mr. Bates' yard in 1841, he strikes us as being the best Short-horn bull within our recollection; and we do not know but taking him all in all, he is fully his equal. It is impossible for us to say at this distance of time, and without being able to compare the two together.

His head, and the set of it, eyes, horns, neck, shoulders and arms, are particularly fine; the fore-ribs and crop as well rounded and full as the best of Devons; he is level on the back, has good width of loin, long quarters, deep, full twist, fine tail, fine legs, soft furry hair, rich cream-colored skin, and mellow handling. He is of large size imposing presence, and majestic carriage. What more one can desire in a bull, we are at a loss to imagine, and shall not exhaust a dictionary of adjectives—American fashion—in undertaking to define.

The price paid for Grand Duke, in England, was 100 guineas—$500. To this add the risk and expense of getting him to the United States and then every ounce of his blood will have cost a round sum.

Of the females, Lallah Rookh in her present form is, upon the whole, perhaps the most perfect in Mr. Thorne's herd; although she does not quite equal Duchess 64th in the width of her brisket and manner of standing on her fore legs, nor is she hardly so full in her quarter; but then we must recollect she is not so old as the Duchess, and may yet equal her in these points. The reader, however, must not misunderstand such criticisms; for it is like trying to point out a flaw in the statues of a Power, or a Crawford. Lallah Rookh is as near perfection as an animal probably ever attained. We need not particularize her fine head, eyes, horns, etc. She was calved December, 1851; her color is a rich red; bred by Mr. Towneley, of Towneley Park, and is by the Squire, (12,217) dam Lavinia, by Prince Ernest, (4,818.) She cost 400 guineas—$2,000.

Lallah Rookh was selected as the *best* heifer there was in England, and as a proof that we were right in our judgment, I may mention she was shown at all the different Fairs with a heifer called Vestris, also bred by Mr. Towneley. L. R. took all the 1st premiums, and V. the 2d. Last year, (L. R. being in this country,) Vestris takes the 1st premiums—thus showing there was none left as good as L. R. She came over as a yearling, but had then won four prizes; her sire, the Squire, won eight.

Frederica was calved January, 1851. She is the same color, and nearly as perfect as Lallah Rookh. She was also bred by Mr. Towneley; and is by Upstart, (9,760) dam Feathers, by the Duke of Cornwall, (5,947. She cost 300 guineas—$1,500. Frederica also was a great prize taker; she won six prizes, a gold and a silver medal, and was the best of a lot of three that won a handsome time-piece, as the three best short horns in the yard at the celebrated Yorkshire show in '52. Frederica dropt Oct. 29th, 1854 a very fine bull calf, (Royal Duke) by Grand Duke. It is the finest calf of its size I ever saw.

Those two heifers were the best animals of their age, in Mr. Towneley's herd.

Duchess 64th was bred by Mr. Bates. She is that deep rich red, so characteristic of this family, and which we so much admire. She was calved in August, 1849, and is by 2d Duke of Oxford, (9,046) dam Duchess 55th, by 4th Duke of Northumberland (3,649.) She has the clear waxy color of the horn at the base, which Mr. Bates so much liked, and which was a peculiar trait in the old Duchess tribe as bred by Sir Hugh Smithson, afterwards Duke of Northumberland, and subsequently by Mr. Charles Colling. She is of medium size, and not quite so fine in the head as Lallah Rookh; but on account of her breeding—to say nothing of herself alone—we would give more for her than any other cow Mr. Thorne has. She was purchased at the late Earl Dacie's sale, who bought her at that of the executors of Mr. Bates. She cost 500 guineas—$3,000.

Duchess 59th, is a color red roan. She was also bred by Mr. Bates, and purchased at Earl Dacie. She was calved November, 1847, and is by 2d Duke of Oxford, dam Duchess 55th, by 2d Duke of Northumberland. She is large size, [illegible] guineas—$1,[illegible].

Darling is a [illegible] red and white. The Duchess 4th to some extent. She was the [illegible] for the best [illegible] She was calved June, 1852, and is by Grand Duke, (10,284.) dam New York a Boy, Cleveland Lad. (3,408.) She was bred by Capt. Dilke, of Masstoke Castle.

Peri is also by Grand Duke, dam Pink, by 2d Duke of York, (5,959.) She was calved June, 1852, and is a deep rich roan; she is fine all over, and about as perfect as Lallah Rookh; has unfortunately had one horn knocked off by accident which detracts a trifle from her appearance, but does no other injury. Bred by Mr. Bolden, of Lancashire.

Aurora, by 3d Duke of York, (10,166.) dam Allspice, by 2d Duke of Northumberland (3,646) is another superb animal; she is red and white, and was calved April, 1851; she has a fine bull calf at her foot, nearly red, got by 5th Duke of York. Bred by Mr. Trotter, of Middleham.

Mystery was bred by the late Earl Dacie. She is red, with scattered white hairs; calved May, 1850, and is by Ursurer (9,763,) dam Minstrel, by Count Conrad, (3,510.) In shape, etc., she resembles Duchess 59th; she has a bull calf, dropped in March, by the Duke of Gloster, a deep rich roan, very fine head and eyes, and stylish like his dam. All the cows with the exception of Darling, we believe, have been bred to Grand Duke; besides several other fine thorough-bred short-horn cows, which we do not particularize.

Young Balco is nearly all red, and is a splendid yearling bull. He is by Balco (9,918,) dam Ellen Gwynne, by Sir Harry (10,819.) Mr. Thorne used him some in his herd this summer.

The above are only a portion of the superb Short horns on Mr. Thorne's farm; yet, lest we should fatigue our readers, we forbear further description of them, and turn to the other animals.

HORSES.—Mr. Edwin Thorne has a fine, stout, fast-trotting mare, with a splendid filly colt at her foot; she is by the trotting stallion Jupiter, out of Gipsey, by the Long Island Black Hawk by Andrew Jackson, etc. This colt has an uncommonly elegant set of the neck and head, and is about as near right, all over, as one could desire. She will unquestionably make a fast, stout, and enduring animal when full grown. There is no more valuable stock in the world than the well-bred trotters of the United States.

SOUTH-DOWN SHEEP.—These, Mr. Thorne has been just as particular in selecting as he has his Short-horns. His flock consists of the buck 112, which he obtained of Mr. Jonas Webb, of Babraham, for 130 guineas—$650; twenty choice ewes, also, of Mr. Webb, seven of which came out in lamb to his buck which took the first prize at the show of the Royal Agricultural Society at Lewes. The rest took the buck 112 after their arrival here. In addition to these, he purchased the ten ewes from Mr. Lugar, which took the first prize at the show of the Society at Gloucester; and five prize ewes from Lord Walsingham's flock. Several of these were in lamb to Mr. Lugar's old prize buck, which he (Mr. L.) has recently had the great misfortune of losing. We cannot speak too highly of this buck, nor of the ewes and their lambs. They remind us of Mr. Webb's best breeders, and are richly worth the money that has been paid for them. We would go into a particular description of the buck 112 and some of the ewes, if we thought it necessary to show their marked superiority over ordinary South-downs.

LONG-WOOLED SHEEP.—Mr Thorne has a superior flock of these, long, broad, round, fine and well-wooled. To produce lambs for his own table, he has crossed a few of his Long-wooled ewes with a South-down buck. This is a favorite cross in England for market lambs, and the mutton is highly prized by amateurs.

PIGS.—Here we found quite an assortment. Berkshires of good size and high breeding. These are the favorites with us, and have been since we first knew them, and that was about twenty years ago.

Next came the Suffolks, which we found a [illegible]. The [illegible] boar is from the celebrated stock of Earl Derby. We [illegible] he would weigh 400 lbs. and has had [illegible] grain as a summer [illegible] a barrow [illegible]. He is [illegible] as apple [illegible] where he gets a little [illegible] by way of variety; and [illegible] better [illegible] than the [illegible] are [illegible] Chester [illegible]. [illegible] are very [illegible] kind [illegible] of which are [illegible] of the imported [illegible] M. Jackson of [illegible] a—[illegible] imported the [illegible]

Mr. Thorne also [illegible] Shanghai [illegible] by Mr. Lugar [illegible] Mr. Thorne's [illegible] Mr. Lugar [illegible] Dutch Tommy, [illegible] some eight [illegible] resembled a fair [illegible] the [illegible] at [illegible] [illegible] [illegible]

Mr. T., who has been quite successful with the latter. The hens he found to lay more steadily, especially during the coldest winter weather, than even the Cochin-Chines or Shanghais. They would lay about thirty eggs, and then desire to sit; but upon being broken up, they commenced laying again, and so continued till they averaged fifty eggs each. By separating the cock chickens from the pullets soon after they are weaned, he has not been troubled by their fighting, which is a great objection to rearing Game Fowls. They are often so pugnacious as to kill each other by the score. These were sent him by Mr. James B. Clay, of Kentucky, and are much like the Earl Derby's breed, though some consider them superior.

The Pigeons here are tumblers, of handsome cinnamon and other colors. Very pretty, of course.

FARM BUILDINGS.—These are among the most complete and convenient we have yet seen. We particularly like the arrangement of the cow stables. The stalls run the whole length of the building on each side, with a wide paved passageway between, of brick set up on edge with cement. On each side of this brick pavement is a shallow gutter to carry off the liquid into cess-pools. From these, the liquid is pumped into a cask on a cart, and then spread over the grass land. It accelerates the growth of grass very much. The stables are high between joints and well ventilated. Glass windows are set on the south side for warmth in winter, and small doors open to the north for summer, besides large doors for the cattle at each end. One of these stables had stalls for cows on one side, and for calves on the other. This adds to the convenience of sucking them.

The Farm, though one of the best in Duchess county, Mr. Thorne is still improving.

The Mansion is handsome, large and commodious. It is surrounded by a wide lawn, dotted on each side by varied mounds and beds of flowers and shrubbery.

Such, in brief, is Thornedale, and its improved stock, which it gives its liberal owner great pleasure to show to all who take an interest in such things.

(We expect from our correspondent a full account of the conditions of this farm the present year.—ED. FAR.)

FRUITS EXHIBITED AT THE SOCIETY'S ROOMS. SEPT. 22.—From the garden of the Messrs. Sansevain and Krotbers, Los Angeles, successors to Don Louis Vigne, and placed on exhibition by Dr. T. J. White, of San Francisco—

Two Oranges—the largest measured in circumference by the long diameter, 12 1-2 inches; by the transverse 11 3-4 inches. Color, bright yellow next the sun; on the opposite side, greenish yellow. The surface presents more than usual corrugation; weight 13 ounces.

Eight Lemons—the largest measured in circumference by long diameter 9 1-4 inches, and by the transverse, 9 1-2 inches. The color is an agreeable admixture of yellow and green. They are of uniform size, and more than usually compressed in the longitudinal parallel. Weight 7 ounces; rind smooth, and slightly ribbed.

Three Citron Lemons—the largest measured in circumference by the longitudinal diameter 18 3-4 inches, and by the transferse, 16 1-4 inches; weight, 2 pounds 11 ounces; color, yellowish green, slightly ribbed, rind smooth. The gentlemen under whose culture this magnificent fruit was produced deserves the highest commendation.

B. B. BROWN,
Chairman Committee on Fruits.

THE attention of farmers is particularly called to the advertisement of Messrs. Dunne & Co., in another column. They are a long and well established house—pioneers in California trade, having been engaged in successful business since early in '49. The fact of their having been so long and well established, should give them the confidence of farmers. Their brick warehouse is of the capacity of six clipper ships, or 8,000 tons, and is in a most favorable location on the corner of Battery street and Broadway, and convenient to the water.

According to the estimates of Gen. Wool, Gov. Bigler, and other gentlemen on the judges' stand there were seven thousand people on the Fair grounds yesterday. Upwards of eight hundred vehicles were counted on the grounds, composing every thing between a butcher's cart and elegant barouches. On the return of the immense cavalcade a number of amusing incidents and harmless accidents occurred, which time and space will not permit us to glance at. One darkey, swelling along in a sulky, was run into by a 'Pike county' wagon and made to "bite the dust." However, everybody devoured more than "their peck of dirt," as the entire length of the road was enveloped in a dense cloud of dust.—*Union.*

SWEET POTATOES.—The two baskets of mammoth sweet potatoes on exhibition at the State Fair were raised by John G. Allmond, Oakwood Farm, Sacramento county, instead of in San Jose, as originally reported.

RAIN AT HUMBOLDT.—The Times says, that on the 15th and 16th of September, heavy rains fell at Humboldt. At Fort Humboldt, according to the rain gauge of the surgeon, the quantity amounted to 1.08 inch.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, FRIDAY, SEPTEMBER 28, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

The Triumph of the Fair.

THE hall of the Assembly Chamber at the Capitol, last evening, was the best evidence of the interest our citizens are beginning to feel in the value of these Industrial Exhibitions. The Union of this morning, says:

The question is settled; the State Agricultural Fair has been held in Sacramento, and we feel justified in pronouncing it a triumphant exhibition for young California. Her productions in the grain, vegetable, floral, fruit, mineral and animal world, astonish her own citizens now; let five more years be added to her age, and California productions will be viewed with amazement by the civilized world.

The Tribune says:

Yesterday will be long remembered for the immense gathering and attractive exhibition at the Louisiana Race Course; the day having been set apart for the exhibition of stock and for the Equestrian exercises, at an early hour the interest felt was manifested by the unusual number of vehicles and horsemen about the streets of this city, and upon the roads leading to the track, there was one continued train during the whole day. Upon arriving at the grounds at 10, A. M., we found a large company already assembled, which by two o'clock was increased to the largest concourse of ladies and gentlemen horses and vehicles that have ever met together in this State. The number of persons present was not less than six thousand.

Every conceivable sort of conveyance was brought into requisition, and it was a matter of universal astonishment to see so many buggies, sulkies, carriages, wagons and carts together; one would suppose the entire wheeled establishments of the State had been collected, the number was so great. There was an immense number on horseback, representing every grade and style of horsemanship, from the most magnificent charger and well-dressed rider in gloves, the native Californians with their spirited steeds and unique costume, to the humble "mula" and not less contented "b'hoy," bent on having a good time.

We give room this week to publish the very able address of the President, together with a portion of the awards. Our next number will be as full and complete as possible.

The Right Spirit.

SACRAMENTO knows her duty, and will do it, as the following facts will show. On Monday an able memorial was presented to the Mayor and City Council, signed by a large number of the oldest citizens, requesting the authorities to take some interest in the coming State Fair, and to offer such courtesies as are due from the government of one city to that of a sister city. A public meeting was called at the Orleans, on Monday evening, which was largely attended. The meeting was organized by appointing J. Neely Johnson, Esq., Governor elect, as Chairman, and Mr. White as Secretary.

The President upon taking the Chair addressed the citizens in an earnest and able manner, presenting the importance of giving public testimony and encouragement to all branches of industry.

J. W. Winans, Esq., then delivered one of his usual felicitous speeches, chaining his audience by his eloquence more than half an hour.

Mr. W. was succeeded by E. B. Crocker, Esq., who showed by his zeal for the cause, his interest in and fidelity to it. Mr. Crocker then offered the following:

Resolved, That a committee of thirteen be appointed by the President to meet and welcome committees from our sister cities, to confer with the City Council, and make such other arrangements as the occasion may seem to require.

Adopted, and the following committee appointed: Gov. John Bigler, E. B. Crocker, L. Upson, Capt. W. Waters, Jos. H. Nevett, C. I. Hutchinson, J. W. Winans, J. H. Ralston, J. R. Hardenbergh, B. B. Redding, Dr. J. F. Morse, Col. Selby, Capt. Harron.

On motion, the meeting adjourned.

A meeting of the Council was called, and a Reception Committee was appointed by the authorities to receive and tender the hospitalities of the city to committees or delegations from other places in the State who may visit the city to attend the State Agricultural Fair. Such visitors are requested to report themselves at the Mayor's office, in the Reservoir Building.

This is indeed meeting the great subject of Agriculture in the right spirit, and such action must reflect honor abroad, and give satisfaction at home. We rejoice to record it.

IN our next issue we shall publish the oration of Ex-Governor Foote.

SECOND ANNUAL STATE FAIR.

THE Hall of the Assembly Chamber was thrown open to the public at half-past seven P. M. on Tuesday evening, and, as we had anticipated, an anxious and expectant crowd soon filled the Hall, amongst whom might have been seen the beauty, fashion and intelligence of our city and and State. We noticed conspicuous citizens from many places; and, if we can judge from joyous countenances, we believe all were highly pleased with the evidences presented of the power of our soil to yield almost everything that the heart of man could crave; for the eye must be blind to truth, that seeing these products would not believe.

On entering the spacious hall of the building, the visitor's eyes are attracted towards a large patent cheese press, simple in its construction, and a California invention. Arranged along the east side of the hall, may be seen a number of Marshall's patent plows; also, a "May Queen" washing machine, manufactured in San Francisco, by J. W. Grieat.

From the Encinal Tanning Company's depot, in San Francisco, are beautiful specimens of tanned leather, and on the opposite side of the hall, are two beautiful stoves from the manufactory of Vose & Co.

Next came two thriving apple trees of but two year's growth, from the Commercial Nursery at San Jose, and adjoining them a magnificent stalk of Egyptian corn grown in this city, and tempting enough to suit the fastidious taste of Cleopatra. At the extremity of the hall is a beautiful growing castor oil bean plant, and all about it are strewn in admirable profusion, beets, potatoes and cauliflowers.

The first thing that strikes the eye upon entering the hall is the beautiful fountain that bursts up before you from the center of the hall, the water jetting from the mouths of the dolphins and shells that surround the pipes; the whole surmounted by cupid. The jetting columns diffuse a delightful temperature to the atmosphere of the hall. To J. H. Nevett, Esq., the Society and the public owe much for this beautiful and healthful addition to the hall.

Stretching across the upper portion of the north wall of the chamber may be read the motto: "So God created man in his own image—in the image of God created he him, male and female created he them." Over the portrait of Clay appears this saying of the statesman: "Our country, our whole country, and nothing but our country." To the left is suspended Washington's portrait, and above it the motto: "First in war, first in peace, and first in the hearts of his countrymen." On the right of the speaker's rostrum and above the picture of Sutter, the motto: "our noble pioneer."

In conspicuous places all over the room are displayed in large capitals the names of the various counties of the State. In addition also to the above, are to be seen fastened to the walls strips of cloth bearing these mottoes: "The whole earth is full of his glory;" "And God said, behold I have given you every herb bearing seed which is upon the face of the earth, and every tree in the which is the fruit of a tree yielding seed; to you it shall be for meat;" "The prospects and glory of our country are based upon its achievements in agriculture;" "Hail to thee, California, garden of world."

Over the door is, "I know nothing which will add so much to the greatness of a country as the improvement of its Agriculture."—Washington.

"Agriculture, the first and most important occupation of man."—Jackson.

"Agriculture, the soul, the basis of the Empire."—Napoleon.

Extending across the western wall of the chamber is this quotation: "The earth was sad, the garden was a wild, and man, the hermit, sighed till woman smiled."

Under the above appears the scriptural phrase: "Man was made a little lower than the angels."

"Agriculture, our greatest interest; it always should be predominant."—Clay.

On the left of the door, in the lobby, the first objects which excite the wonder and admiration of the visitor, are two tables laden down with vegetables. Among them are two baskets of mammoth sweet potatoes, fair specimens of three acres of their fellows, grown on a farm in San Jose. Next, is a table containing rolls of tobacco, cured, from Cuba seed, and grown by Dr. Brown, of Sacramento. Adjoining these specimens, are two flourishing tobacco plants, growing luxuriantly in tubs. These are five feet in hight, and the leaves fifteen inches in length. Here are also specimens of tobacco grown on the banks of the Sacramento, by Messrs. Hooker & Fern.

Arranged along the inside of the lobby are displayed two immense sweet potatoes, weighing together eleven pounds; from the Yolo side of the river a big basket of onions, weighing from one to four pounds, and some of which measure twenty inches in circumference; bags containing parsnips two feet in length, beets of twenty pounds weight, and potatoes, any one of which would make a meal for the biggest Irish family in Tipperary; also, tomatoes one foot in circumference; squashes as big as pumpkins, and pumpkins as big as the head of a barrel.

On the same side of the room is a lot of elegant saddlery, from the establishment of A. T. Nelson, 89 J street; and, next to it, a handsome "Golden Gate" stove, cast in this city, by Messrs. Kendall & Co.

A basket of giant tomatoes, raised at the Shell Mound Nursery, and presented by J. L. Sandford, attracted universal admiration, no less on account of their huge dimensions than their brilliant color and handsome proportions. On the same table are baskets of large squash peppers and long red peppers, presented by James E. Johnson, Mission San Jose; also, unique looking scollop squashes, from the same gardens. Then come onions, potatoes, &c., from Hooker & Fern, also specimens of white wheat, barley and oats, very plump and healthy, from J. E. Johnson.

Among the many pomological curiosities in this part of the room, two specimens of Spanish Mission pears and peaches called forth expressions of astonishment from all beholders. On one sprig is a cluster of twelve large pears, and on the other, a stem five feet long, are no less than thirty magnificent peaches, some of which measured seven inches in circumference. There are from E. L. and L. Sanders, Esqs.

A choice lot of Sacramento pottery ware, and a souvenir parlor stove, intended for the consumption of either wood or coal, are to be seen in this vicinity. Here, also, is a sunflower, three feet in circumference; bushels of Sacramento and Yolo peanuts—some of them two inches in length, a glimpse of which would throw the pit of the Bowery Theatre into ecstacies. Just beyond these, and under the west window of the room, are two cheeses—one weighing 185 pounds, and another 117 pounds—from the dairy of Samuel Lewis, Petaluma.

The table to the right of the window is laden with bags of flour, from the Stockton City Mills; Avenue Mills, Stockton; Star of the West Mills, and the Star of the Pacific, the first mill erected in California, Napa. A beautiful bag of flour, gold lettered, and labelled from the Marysville Mills, was the subject of deserved encomium. Bags of corn meal are also exhibited.

A lot of Chile (Valencia) muskmelons, in color so nearly resembling squashes as to be mistaken for them by almost everybody, covered a small table in front of the flour bags. By their side are two novel fruit pickers, the invention of some Yankee genius. Under the table, the great curiosity of fine twin musk and watermelons.

On the next table are boxes of neatly bottled soda and sarsaparilla, from Chase & Co. Marysville; Lippincot and Vaughn, Stockton.

Ranged side by side, under these tables, are six monster pumpkins, one of which weighs 135 pounds.

CENTER TABLES.—These were the grand receptacles for the smaller fruits, shrubs, pomological and floral curiosities, &c. On one are choice varieties of grapes from the prolific vineyard of Messrs. Cook & Jackson, of this city. One plate contains clusters of the White Syrian, and on the label attached is this explanation: "This is the grape mentioned in the scriptures as found by the Israelites on the brook of Eschul, the branches of which were so large as to be borne on a staff by two men." There are also specimens of the Royal rose Chasselas, royal Muscadine, white Frontignan, and white Sweetwater. Next came two mammoth lemons, presented by Dr. T. J. White, San Francisco, from the gardens of Los Angeles; and on the end of the table, the Lambert Newtown pippin, presented by Washington Meeks, of this city, 15 1-2 inches by 14 1-2 inches. Next came a number of beautiful citron lemon oranges, the largest of which measures 19 inches longitudinally—these were grown in the vineyard of Messrs. Sansevaint, Los Angeles. The remainder of this table is adorned with plates of Seckle pears, from Lewelling's Ranch, San Jose Mission; stems laden down with apples, and many varieties of fruits of every description indigenous to the soil of California.

The show of apples is exceedingly fine, and forever puts at rest all doubts as to the capability and suitableness of our soil for the culture of this delicious fruit. Kellogg's orchard, in Napa, furnishes the Yellow Bellflower, Roxbury Russet, Baldwin and Æsopus Spitzenbergh.

Two elegant seedling peaches, of a foot in circumference, plucked from a tree two years old in the garden of P. L. Wimmer, Coloma, were special objects of wonderment.

At the western central table a great crowd was grouped about a little garden plot of strawberries, and we must confess the temptation was almost irresistible with us to pluck the forbidden fruit. These plants are from the famous Shell Mound Nursery, near San Antonio, and on them are raised thirty-two varieties of berries. One of the Hovey Seedlings irrigated our mouth for a month afterward. It measures four inches in circumference, and is as beautiful as large.

On the walls above this table are beautiful samples of raised embroidery work, needle work, and worsted work, designed and executed by Mrs. Stephens, of this city. Many of these specimens are very ingeniously as well as tastefully wrought, and excited approbatory remarks from visitors. A water colored landscape, neatly framed, and pastil drawings, also by the same lady, are very meritorious productions.

A wrought, drab colored piano cover, by Mrs. J. L. Sandford, of Shell Mound, is as handsome a specimen of work as can be found on exhibition in any of the Fairs in those States where the matrons are more mature in age and experience than in California.

The space about the Speaker's rostrum is very beautiful temple, built by A. Saul, Esq., the able and tasteful artist at Smith's gardens.

A graceful tree, denominated the Auricarin excelsior Norfolk Island Pine, from the gardens of the Messrs. Smith, is one of the choicest and most valuable trees to be found in the State. It occupies a conspicuous position in front of the Speaker's desk, and to it all eyes were directed.

Bull rushes (not dangerous) from Cayote Creek. Castor oil beans in the pod, and out of

the pod; mineralogical specimens; wax fruit; ivory hair brushes, from Howard's drug store, J street; "a love of a bonnet," from Miss Chatterton; Doane's patent clothes rack; magnificent collections of daguerreotypes, from Vance's, Sacramento, and Johnson's galleries, San Francisco; sheaves of grain; stalks of corn, twenty feet high; cases of chapeaux, of Collins' manufacture; elegant paintings of New England landscape scenery, and other articles of use and ornament, complete the collection which is now on exhibition at the capital.

Among the distinguished visitors from abroad, we observed Gen. Wool and suite, a large number of more youthful epauletted gentlemen, Ex-Gov. Foote, Frank Soule, and Ex-Gov. Burnett.

The inaugural address, by Gen. C. I. Hutchinson, was elegantly well delivered, and listened to with the profoundest interest and most devoted attention by the crowded auditory. It will be found below *in extenso*.

ADDRESS OF GEN. C. I. HUTCHINSON,

PRESIDENT OF STATE AGRICULTURAL SOCIETY.

Ladies and Gentlemen, members of the California State Agricultural Society.

The occasion which calls together this large and respectable assemblage is one of no ordinary interest. Before us, spread out in rich profusion and beautiful array, fresh from the prodigal hand of Nature, we behold the results of California Agriculture—some of the results which, in this young State, and under the auspices of an intelligent people, have followed the application of enterprise and industry. Looking back through the five brief years of our existence as a State, we can hardly fail of being struck with wonder at the position in which we find ourselves placed to-day.

To one accustomed to reckon time by Eastern chronology, and to base his calculations of the period required for the attainment of a given object upon computations familiar to the farmers of older States, the occasion is pregnant with subjects for the most instructive reflections. The past seems like a dream, the memory of which still lingers about him, and he can hardly believe the evidence of his senses when the triumphs of the present are recalled.

Those of us who emigrated from our old and cherished homes five years ago scarcely expected to be called upon to engage in the imposing ceremonies of an occasion like the present. Then other motives prompted our actions, and other hopes inspired our bosoms. Fired with enthusiasm at the brilliant reports which every breeze from the Pacific wafted over our abodes, and dazzled with the golden visions which floated before us, we came to amass wealth in other less noble, but, at that time, more promising pursuits. The love of gold, the thirst for sudden wealth, mingled with a fondly cherished hope speedily to return flushed with success to the endearments of their families, in most instances, probably, alone animated men's minds. Gold was the great object of their ambition—the moving spring—the stimulus of energy, and the ultimatum of their expectations. The all-important subject of Agriculture had not then been deemed worthy of consideration.

The capacity of the soil of California had never been tried. Vague conjectures only, growing out of the wild exuberance of uncultivated vegetation, was all upon which the early immigrants could rely to sustain an hypothesis based upon the agricultural advantages of the soil of many parts of the State. It was not then imagined that this could ever become a great and prominent interest. The traveler, in somuier, over the arid plains of this arid valley, would hardly have supposed that a lengthened drought of five months' duration was compatible with a successful application of industry to this pursuit. Much less could it have been credited that within the period of his own residence in California, an exhibition of the productions of that same soil would be held, which in variety, in elegance, and in magnitude, might justly challenge comparison with those of any other region of the world.

I need not occupy your attention in endeavoring to prove that Agriculture is the natural or original and most suitable employment of man. The proposition will be admitted by every intelligent mind. Nor is it only his natural and original employment, but it is, of all others, the most useful and honorable. In nothing is the progress of a country towards civilization more clearly shown, than by its advancement in all that pertains to a scientific system of husbandry. It is the foundation of all true enjoyment, the source of genuine and substantial happiness, the employment on which all others depend. If these things are so, it should be the first care of every government to foster and sustain the efforts which are made for its encouragement and promotion—to throw around it the protecting arm of the State, and to make it a prominent object of public concern. Such has been the policy pursued and advocated by many of the ablest and most venerated statesmen of our country. Prominent upon the long list of heroes and statesmen whose mighty energies were lent to the encouragement of Agriculture, and who to precept added practical evidence of their sincerity in the field and on the farm, we find the immortal names of Washington, Jefferson, Jackson, Clay and Webster. The achievements of the latter, the interest which he manifested in this noble pursuit, and the results obtained under his wise direction and sagacious train of thought have become familiar to every one. Perhaps it is not so generally known that to Thomas Jefferson belongs the credit of having been the constructor of a mould-board to a plow, which, in its day, surpassed any previously planned, and that it was not deemed beneath the dignity of this great man and patriot, at the very time when engaged in the arduous and responsible duties of President of the United States, to present his model to the Agricultural Society of Paris, and to become himself a competitor for a prize. The same principles, the same settled convictions of duty which animated this great statesman, have prompted the Legislature of California to lend its aid to the development of her agricultural resources. Urged by a laudable desire to encourage those engaged in the business, and to promote an interest which it justly regarded as of paramount importance to our young and growing Commonwealth, they appropriated five thousand dollars per annum for the period of four years, to be distributed in premiums under the direction of this Society.

By the sanction of a Legislative enactment, this association was organized a little more than one year since, and commending itself by the noble objects designed to be accomplished, it has enrolled upon its lists of membership nearly four hundred names, in progress highly gratifying and encouraging to all interested in the projects it proposes to accomplish.

It will scarcely be necessary to enter into an elaborate argument to prove the advantages calculated to result from collective associations like that to which we refer; nor will it be expected of me to repeat the oft-told illustrations of the benefits resulting from the annual exhibitions of the products of the soil and the attainments of industry in other branches of useful labor by means of Agricultural Fairs. The beneficial influence exerted by the occasional collection, examination and comparison of the products of farm labor, and the union of those engaged in this occupation for consultation upon matters pertaining to their common interests and welfare, is too plain to be doubted. In no other way can the different modes of culture and the capacities of separate sections of a country be so easily and appropriately compared. A system of cultivation adapted to the region of Sacramento may be unsuited to that of Los Angeles, and the soil of the latter may be peculiarly fitted to the growth of certain species of plants which can never succeed under the prevailing influences of the former. The facts bearing upon all these questions of general importance to the agricultural interests of our State, can only be successfully elicited by occasions such as that on which we are now assembled.

With the result of the present undertaking we have every reason to be satisfied. The magnificent display of the products of our soil, the vast variety of articles of the successful cultivation of which we have the evidence before us, the prodigious size and liberal development to which some of them have attained, the beautiful array of gems from the garden, and delicious fruits profusely scattered around this hall, fully attest the utility of these associations and demonstrate the capabilities of our State in language more forcible than any arguments which I can use.

It would be impossible in the limited time at my disposal to enter upon a lengthy review of all that has been accomplished in this branch of industry in our State up to the present time. This and other topics of absorbing interest will, no doubt, be ably treated upon by the eloquent and distinguished gentleman who has been selected to address you.

The difficulties with which the early agriculturist in California had to contend were manifold and trying. Like his primitive ancestry, he had an untried and unbeaten track to open and pursue. The expense of cultivation, arising, in part, from the high price of labor, was not the least of the obstacles to an extensive application to this pursuit, and upon the early immigrant, just arrived in the country in search of a fortune, it was a difficulty hard to overcome. With the progress of time, however, this condition of things has changed; labor is cheap enough to be made profitable for employment, yet not so cheap as to degrade the laborer. The result has been an increasing interest in the business, a rapidly expanding area of cultivation, and a vast multiplication of those whose whole energies, strength and capital are employed in unfolding and maturing the wonderful resources which now lie dormant beneath our fertile soil, and the germs of which we behold arrayed around us to-night.

In many respects no section of the world is more favorably situated for the easy prosecution of husbandry than California. In fertility of soil, in the peculiarities of climate, and the relations of heat and moisture which prevail, no section can exceed it. No where are the essential requisites for vegetable growth and maturity more strikingly predominant than here. No where have the first efforts of the laborer been followed by a more flattering result, or a more abundant and profitable yield. Not to speak of other sections of the State, some of which are more advanced than that of the Valley of the Sacramento, we gather from the returns of the County Assessors, that even within the area of this region there have been raised during the present year no less than two millions of bushels of grain of various kinds. And yet, the real capacities of this portion of the State are but just being appreciated. Of the large extent of valuable farming land lying within the counties immediately tributary to this city, a very small portion, comparatively, has yet been subjected to the dominion of the plow, or been made available for purposes of profit and utility.

The following exhibit illustrates the practical result of the working of ten acres of ground on Putah Creek, the present season:

Plowing, 10 acres at $3 per acre,	$30 00
1000 lbs. seed wheat at 2 1-2c per lb.,	25 00
Harrowing and sowing,	15 00
Cutting, &c.,	10 00
Use of reaper,	10 00
Threshing,	48 00
Use of threshing machine,	15 00
Delivering the same in Sacramento,	55 00
Sacks,	28 00
Total expense,	$264 00
Ten acres yielding 35 bushels per acre, is 350 bushels, or 21,000 lbs. at 2 1-2c., is	$525 00
Deduct expense,	264 00
Leaving this sum as the net proceeds of ten acres of ground as stated,	$261 00

This calculation does not include any rent of land, or interest on the investment.

If we deduct for these $61, we have $200 remaining as the clear profits of ten acres of ground in the locality mentioned, or $20 per acre.

The above is a calculation based upon experience in one of the staple articles of agricultural value. Increased capital and a more extended application of enterprise are needed to develop our ultimate resources, and to introduce upon a large scale the cultivation of many articles to which our soil and climate are adapted, and which have as yet been only partially tried. Among these, not the least in importance is the grape. The subject of grape culture has of late years attracted not a little attention among those engaged in horticulture, in those portions of the United States at all suitable for its profitable conduct. Many circumstances, however, have concurred to circumscribe the extensive cultivation of this fruit, among which, the principal one is the severity of the climate, and its unsuitableness to the maturity of many varieties, and in some instances, to the preservation of the plants themselves.

Here, in California, we have none of these obstacles to contend with. Our climate, in fact, would seem to be peculiarly fitted by many of its most important conditions to the profitable prosecution of this branch of Agriculture. In uniformity of temperature, and in the absence of those sudden or extreme variations so commonly observed elsewhere, it would seem to compare favorably with the most successful wine growing districts in the world. Without entering further into the philosophy of this subject, or entering upon the discussion of the various reflections to which it gives rise, we cannot present it more forcibly than by quoting an extract from the last number of the Patent Office Report on Agriculture. Speaking of the southern valleys of California, it says: "As these features of climate, which are known to be so decisive of the measure of success there, attain singular completeness, as it may be said—that is, the measure of humidity and of temperature becoming of the most perfect mutual proportion, the result is the most extraordinary perfection of vegetable development."

We are perfectly confident that in all the conditions essential to a profitable investment in this business—in uniformity of temperature, in the proportion of atmospheric humidity, the valley of the Sacramento is as favorably situated as most other sections of the State. In the experiments already tried—in the large and elegant specimens exhibited here to-night from gardens in this vicinity, we have abundant evidence of the correctness of these views.

It would be gratifying to be permitted to enter fully and at length upon a broad and comprehensive consideration of the subject of Agriculture. It is, in some respects, one of the most imposing, extensive and truly worthy objects to which we can turn our attention, and next to the common school, of all others the most important and inspiring. A State setting out upon the theater of action, and holding up to the especial regard of its people these two noble subjects—a government sustained by the common school and by Agriculture—cannot fail of being prosperous. It is based upon a rock which Time only hardens and renders more durable; its corner stone is as enduring as the immortal mind which God has breathed into his intelligent creation, and the pillars which sustain it *must* be perpetual. These two—Agriculture and the common school system—belong indeed, to the same class; they are co-workers together towards the same great end; associate agents for the amelioration of the race, the ennobling, the improving the elevation and civilization of man.

To be a farmer—a modern farmer—a successful cultivator—a man must be educated. Ignorance is as incompatible with utility in this as in other occupations. Education—intelligence is the foundation and the secret of the attainment of all that is valuable. Muscular endurance—brute physical force is no longer the principal agent in this vocation. A man must have a head to direct, as well as strength and hands to execute. The routine systems of our ancestors are unsuited to the spirit of the present age and generation. Agriculture can no longer be regarded as an art merely, but a science, and in proportion to the application of true scientific principles to the cultivation of the soil, just in proportion as empiricism is made subservient to the necessities of the farm so will be the success of the husbandman and the reward of his labors.

The Awarding Committees on articles exhibited at the hall, stock, &c., will be prepared and submit their Reports and Awards this morning at 11 o'clock, at the Hall.

The annual meeting and election of officers will take place this morning at 9 o'clock.

AWARDING COMMITTEES.

On Horses—C. H. Hodges, J. W. Webb, Solano; John David, San Francisco; H. R. Covey, Sacramento, Calvin Martin, Santa Clara; J. N. Clark, San Francisco; J. C. Davis, San Joaquin.

Neat Cattle—Peter Quivey, Santa Clara; J. S. Colgrove, San Francisco; Charles Keller, Sacramento; Michael Nye, Yuba; John McMullin, San Joaquin.

Sheep and Swine—Wm. Aram, Santa Clara; Joseph Haywood, Sacramento; Dr. Hill, Sonoma.

Poultry.—J. W. Pugh, Sacramento; M. Walthall, San Joaquin; Mr. Beatty, San Jose.

On Trotters, Pacers, Roadsters.—Gen. Cahoon, Sacramento; R. S. Anthur, San Francisco; Frank S. Stevens, Sacramento; J. K. Rose, Mr. Kelty, San Francisco; A. S. Beaty, Santa Clara Clara; J. C. Davis, Yolo.

Grain.—L. Williams, Sacramento; Jeremiah Miller, Santa Clara; E. L. Beard, Alameda; J. M. Ramirez, Yuba; Chas. Green, Yolo.

Fruits.—Dr. F. W. Hatch, B. B. Brown, Sacramento; Jos. Aram, James Low, Santa Clara; W. Flint, Alameda; C. C. Osborne, Napa; John Centre, San Francisco.

Native Wine.—M. G. Vallejo, John A. Sutter; F. W. Macondray, San Francisco; W. C. Waters, Sacramento; McP. Hill, Sonoma.

Flowers.—Chas. Weber, San Joaquin; F. W. Macondray, San Francisco; T. M. Logan, Sacramento; E. A. Shepeard, Yuba; L. Prevost, Santa Clara.

Vegetables.—Dr. Cobb, Santa Clara; David Hoagland, Yolo; Wm. Blackburn, Santa Cruz.

Dairy, &c.—L. Frink, Sacramento; Mr. Morgan, Santa Clara, Jno. C. Fall, Yuba.

Agricultural Implements.—No. 1—M. Walthall, San Joaquin; G. H. Beach, Yuba; S. J. Crosby, Santa Clara; I. N. Babcock, Sacramento; O. C. Osborne, Napa. No. 2—Mr. Bosler, Santa Clara; Jas. Clark, San Francisco; Barton Lee, Sacramento. No. 3—Calvin Marten, Santa Clara; A. P. Spalding, Sacramento; Mr. Bowman, San Francisco.

Manufactures.—No. 1—R. Rust, Yuba; R. T. Brown, Sacramento; H. M. Baggs, San Joaquin. No. 2—C. K. Garrison, San Francisco; Jas. Bowstead, Sacramento; Capt. D. Van Pelt. No. 3—Mrs. C. I. Hutchinson, Sacramento; Mrs. R. Chenery, San Francisco; Mrs. M. Walthall, San Joaquin.

Works of Art.—No. 1—Mrs. P. H. Burnett, Miss E. M. Quivey, Santa Clara; Mrs. J. H. Nevett, Mrs. J. Neely Johnson, Sacramento; Mrs. A. H. Myers, Alameda. No. 2—Eli Corovin, P. H. Burnett, Santa Clara; Mr. Jewett, San Francisco; J. F. Cloutman, Sacramento; James Allen, Yuba.

SPECIAL PREMIUMS.

Lasso and Indian Sports.—No. 1—John A. Sutter, Yuba; M. G. Vallejo, Sonoma; J. R. Snyder, San Francisco; J. C. Davis, Yolo; Peter Quiver, Santa Clara.

Lady and Gentleman Equestrianism.—No. 2—Gen. John E. Wool, Solano; A. Redington, Sacramento; S. J. Henslay, Santa Clara; R. Chenery, San Francisco; A. Fisher, Stockton.

We have made extracts from the reports of our neighbors of the Union and Tribune; and as our duties connected with the Fair necessarily prevented our giving that attention to many details we desire, we present but a portion of the awards, and particularly that which excited the liveliest interest—the Lady Equestrians.

The Award.—At eight o'clock in the evening the Assembly Chamber of the Capitol was thronged to suffocation, to listen to the award of prizes to the *equestriennes* of the morning.

On the stage were the President and Secretary of the Society, Gen. Wool, Gov. Foote, Gen. Sutter, and Gen. Redington, members of the Committee on Lady Equestrianism.

The prizes were duly and most appropriately presented by Rev. O. C. Wheeler, Secretary, as follows:

First Prize, to Miss Stevens, of Sacramento—a Gold Watch and Chain, valued at $100.

Second Prize, to Miss Morgan, an elegant Saddle.

Third Prize, to Mrs. Fern—a beautiful Silver Cup.

Fourth Prize, to Mrs. Kellogg—a splendid Riding Whip.

Premiums on Live Stock.—We give below the awards of the Committee:

1. Best imported or American Stallion, E. H. Parker's "Grey" stallion "Ben Taylor," $150
 2d best do, Beaty, of San Jose, sorrel "Napoleon." - - - - - 75
2. Best imported or American Mare, Sylvester Tryan's "Surprise" 2 year old, - 50
 2d best do. "Black Hawk Maid," 6 year old, 25
3. Best Calf over a breed stallion, L. A. Gould's Brown colt "Kossuth" 2 year old, - 50
 2d best do. Threadway's "St. Lawrence" Canadian, 1 year old. - - - 25
4. Best California bred mare, Robert Harris' sorrel "Fashion," 3 years old, - 25
 2d best do. D. A. Shaw's of the Cosumnes river, sorrel "May Queen," 1 year old, 15
5. Best colt, over 1 and under 3 years old, Wilkerson's sorrel "Dave Hale" - 20
 2d best do. Murray's bay colt "Young Morgan" - - - - - - - 10
6. No specimens of mules entered.
7. Best breeding mare with colt, "Maria Downing" and best colt six months old, J. Downing - - - - - 20
 2d best do. Arnold's Black filly "Jane" 10
8. No dray or heavy horses shown.
9. Best team of matched carriage horses, Asa Green's "dark span" - - - - - -
 2d best do. Jones' "Dave" and "Jim" - - - - - -
10. Best draft horse, J. Crosby's bay horse - - - - - -
 2d best do. - - - - - -
11. Best exhibition horse, Wm. Fowler's gray horse "Major"
 No second best.

Correspondence.

Lettera from the Coaat Range.—No. 2.

Russian River, Godwin's Ranch, Sept. 9, 1855.

Editors Farmer: Yesterday morning at sunrise I wrote you a hasty letter at Petaluma, and I am now resting, after a delightful jaunt of thirty-six miles, nver an excellent wagon road, at this hospitable abode. It is not a public house but the private residence of a young enterprising Virginia adventurer, who settled in this part of Russian River Valley some four years since. It is about twenty-five miles from the sea, and apparently, as you survey the landscape, lies at the head of one of the numerous valleys, which are chained to each other by the course of Russian river, from its source a hundred miles above to its mouth on the Pacific.

The road from Petaluma all the way to this place is mostly level as a turnpike and very free from dust. It connects Petaluma valley with that of Santa Rosa, and farther north with that of Russian river, and terminates about ten miles from this Ranch at a point where the valley ends in a canon, through which Russian river is narrowed up and rushes with much force. Beyond this however I am informed that the same smooth wagon road opens anew and so winds through a succession of valleys for a very great length.

Petaluma valley is rather undulating, particularly at its sides, near the Coast ridge and Sonora ridge of mountains, and it presents fine agricultural aspects and a rich volcanic detrital soil. Wherever the rock was exposed, it appeared basaltic and vesicular, and in one spot I noticed, in a hillock of rock of this description projecting above the level of the valley, the borings of Lithadomi similar to the holes which are made in the serpentine about Fort Point by the boring mollusks of that locality. The hills bordering the Coast Range of this vicinity is the famous Potato Region of California. These vegetables are said to grow more thriftily and abundantly in this hilly district than in any other spot in the State, and it matters not whether it be hill or vale in which they are planted, they grow and abound alike, with very little care or expense.

But I think, of all the valleys I have seen in Californiia, Santa Rosa presents the most singular advantages for agricultural employments and rural improvements. It is broad and level, and in its northern portion is well covered with oaks and bounded on the west by hills and mountains abounding with forest trees of various descriptions. Its geological construction fits it peculiarly for Artesian borings in many places—and notwithstanding its present extremely dry and barren appearance, I think the time will come, when, the year through, it will smile with verdure and blossom like the rose.

Near the village of Santa Rosa the greatest elevation of the valley exists, but this is imperceptible to the traveler. Here the springs descend in one direction easterly, winding round the northern extremity of the Sonoma ridge and emptying into San Pablo Bay—and in another westerly, ending in a laguna at the base of the Coast Range, which vents itself into Russian river a few miles further on.

The road continued to take us through fine agricultural districts, not much cultivated, though wholly claimed, which became more thickly wooded the further we advanced northwardly, till at last in Russian River Valley the country became more undulating and the interior ridges of hills and mountains more lofty and picturesque. The whole landscape was pleasing and soft but badly defined in consequence of a thick mist or smoky state of atmosphere which enveloped the whole, and particularly the higher regions, so that Mt. St. Helens could not be seen for the entire journey. This I regretted, as there is nothing in nature more interesting to my eye and contemplation than the lofty elevations and peaks which swell up from the surface of the globe. The more lofty they may be, the more profound they carry my thoughts into meditations on the forces acting from the centre of the planet, which have produced their elevation—forces not yet sufficiently investigated by physicists, but which I believe will ultimately be discovered to receive their stimulus and energy from agencies emanating from the Sun and taking their rise in the heart of that vast central body of our solar system.

About three and a half miles before reaching Godwin's Ranch we were informed that there was a soda spring about a quarter of a mile off the road, of a valuable character. Desirous of seeing everything curious in this district, we ad[illegible] the driver to turn the horses in that direc[illegible]. We ascended a gentle declivity leading up to the Coast Range, and in a narrow winding gully we soon began to see the pebbles filling its dry bed covered with a white coating. Further on was a little filthy looking water covering the stones, and tracing this we found a feeble spring issuing from a small hole, which appeared to extend into the bank between the igneous bed rock and the drift of river pebbles and sand which overlaid it to the depth of three or four feet. The little hole which had been scooped from the stones to receive the water, was swarming with the larva of musquitoes, but we were all earnest to taste of the famous spring, that we had heard so much of for the last half hour. The water was slightly acidulous, bituminous and sulphureous to the taste. Besides which, carbonic acid gas and iron were also noticeable. Some of the party were very fond of it, and drank a quart, declaring it to be as fine as Congress water. A little answered for my palate, for medicine in quantities I do not fancy. Our driver declared that it was not half as fine as a sherry cobler, and turned up his nose at the mere taste of it. Deposits of red oxide of iron stained the stones on the borders of the basin, and a scum of naptha floated on the stagnant surface in the bed of the stream. The rock exposed by the running water of the rainy season was apparently that of talcose slate, but on breaking it with the hammer it was in spots most beautifully vitrified and of a light pea green color.

We arrived at Mr. Godwin's about 4 P. M., having left Petaluma at 7 A. M., and stopped on the way not far from three hours. We were received by this gentleman with as much politeness and cordiality as if we had been old friends instead of comparative strangers. We were made at home immediately at his private residence, with assurances that every facility should be afforded to make our future movements agreeable and satisfactory. The first thing was to get a bath in Russian River, which, to my dismay, I learned was nearly a mile from the house. The day had been extremely hot and we had forded a lower section of the river at one o'clock and had deferred the most inviting opportunities for a bath with the expectation of finding a large flowing river at Mr. Godwin's door. However, a long walk, in an over-heated breathless atmosphere, took us to a large pool of stagnant water, where we found that Indians and hogs had just been refreshing their sweating carcases. The water, however looked tolerably inviting—and the bath notwithstanding its disagreeable associations, was refreshing indeed. While at the river we were informed that the Indians—a large tribe of whom, called Caenamaras, dwell in this vicinity—were to have a great danee in the evening. They were even then making preparations for it, and we called at their ranehcria—or longes—as we returned from the bath. This was in the midst of a great growth of willows, rising from middle of the dry bed of the river. There was a great number of wigwams, if they may be so called—consisting of round spaces 10, 15 or 20 feet in diamter, cut from the thicket, and protected only by the upright twigs and foliage growing around. Here, in one, a number of the Indians, men and women, were preparing for their dance by ornamenting themselves with head-dresses made of feathers, &c., beads with long buzzard-quills sticking upright in their heads, or sticks ornamented with colored feathers and beads run through their ears. Their faces were painted with black stripes—and under their armpits was tied a large cord very tight, from the back of which was hung a coat of large, long, flat feathers or quills, one row shingled on above auother, the whole descending as low as the calves of their legs, very much in shape of the skirts of fashionable dress coats. The bare shoulders of some were painted with black stripes—and some had their legs painted black. Except the feather ornaments and a cloth around their loins the males were naked. The women were dressed with long gowns of dirty calico or cotton—their faces were painted in like manner as the men, and around their necks were strings of beads and large pieces of the pearl oyster shell cut in squarish forms, which ornaments were also worn by the men.

There are about 150 Indians belonging to this tribe. Among them were some very old men and women. Their age seemed exceedingly great, and one old woman in particular had so far passed into imbecility and was so wrinkled and short-necked that she reminded me strongly of the ourang outangs which I had seen in former years, both in shape, nakedness and expression of face, and in scrathing her head, face and misorable body with her long lank arms and fingers. The women of Indian tribes are proverbial for doing all the work, while the men are indolent or engage in hunting, fishing and war, as their desires may be. So among this portion of the race the same habits were observed. The women in the different habitations, if these open-topped willow huts could receive such a name, were busy pounding parched wheat, or boiling vegetables, or carrying burdens and taking care of their papooses. On the whole they seemed as intelligent a looking tribe of Aboriginals as I have seen. The younger men were athletic and well formed. These, however, like all other tribes on the continent, are passing rapidly away. They have the horrible practice of infanticide common among them, and the women consider it no crime to press their knees upon the breasts of their newborn infants and crush their ribs, and thus strangle and destroy them. Of this fact I am assured by a reliable person, who was informed by the Indians themselves. The disposition to deception and murder seems to be almost a universal quality of these untamable tribes, and even many among this small company were pointed out to me as having been formidable adversaries to the early white settlers in this neighborhood. They are now, however, under Mr. Godwin's complete control—and Col. Henley could have done no better act for them nor for the settlers in this region of country than the appointment of Mr. Godwin as his agent in this locality.

About 9 o'clock in the evening we strolled down from the Ranch to the Indian village, to witness the dance and festivities. A long ways off we could see the light of their fires and hear the sound of their musical instruments and their songs and shoutings. When we passed round the clump of willows, the scene that broke upon us was wild and hideous in the extreme. The whole tribe, men, women and children, were gathered around the fires, which were constantly fed with dry twigs, so that bright flames illuminated brilliantly the entire company. Facing these were the dancers, dressed even more fantastically and hideously than I described them as seen in the afternoon. Just behind and beyond them were a number of their musicians, led by one who seemed to be the spokesman of all festivity and song. He opened by singing loudy the sounds of various vowels—others joined in, and the clatter of long sticks, after the style of castanets, with a chorus of yells of "ha—ha—ha"—and other bold and frightful intonations, composed the orchestra for the occasion.

The motions of the dancers were in unison, but they were fantastic and wild—at times ferocious, and really frightful. Such as they were, they were repeated time and again; and at the end of each verse and evolution there was a pause, and a universal scream of applause from their delighted audience. The movements of the men were accompanied by the stabbing motion of long rods which they would hold in one or both hands, and by the most ferocious aspects of countenance and whistlings of triumph and determinntion between their teeth. They danced until the perspiration rolled from them in streams, and seemed to have no sensation of fatigue. The women were more quiet and graceful in their motions, and joined their voices to the general tumult of the festivities. The whole scene was a most interesting and gratifying picture to us all, and we returned, after spending an hour in witnessing these strange evolutions and their nameless and numerous accompaniments, satisfied that the sight was worth the whole fatigue, trouble and expense of our journey from San Francisco to this place.

The agricultural prospects of this valley are very good, Indian corn being one of the articles fitted to its soil. The finest fields of corn which I have seen in the country are here, and it is said by the settlers to produce as tall a stalk and as full an ear as any of the corn growing districts of the Mississippi Valley.

To-day is Sunday, during which we shall rest, and on Monday morning early we shall start, fresh and bright, for the Geysers and Clear Lake.

Respectfully yours, C. F. Winslow.

Our Boston Correspondence.

Letter No. 5.

Boston, August 19, 1855.

Editors Farmer: The weather and the crops, is a stereotyped head for a daily paragraph, nothing being just now so interesting, to all, and the general question is, how are the crops coming in? The tone of encouragement comes from all quarters, until within the last two weeks, a large quantity of rain having fallen, and in some sections of country the grain and even the grass crops have suffered. Letters from all parts of the country are before me.

J. V. Jones, Esq., of Birdsville, Georgia says: The crops of the Southern States were never so flattering as at present. The grain crop, with a few more showers, will be immense. The Cotton, which now drives the wheels of all Christendom, has suffered, first from drought, secondly from rains, consequently cannot be an average crop.

Sam'l Thorne, Esq., of Thornedale, Washington Hollow, N. Y., writes: "A great deal of damage has been done in this vicinity, by the recent rains. Rye has grown considerably, and oats are very much down. We have but just fairly started in our haying. The prospects however, for all kinds of crops, are very flattering." I intend very soon, to accept of the very polite invitation, which I have received from Mr. Thorne, to visit his place, and examine his herd and improvements in his farm, and will then give a detailed account, which will interest your many readers.

Gen. Roswell Harmon, of Wheatland, N. Y., writes us accounts of the harvest in his county. He has paid much attention to the different varieties of wheat, having sown over sixty different varieties, received from all the best wheat districts of Europe, Asia, and America. Most of the European varieties are slow in maturing, and liable to rust. In all of his tests, he has not found the bearded varieties to be any more productive than the bald, and the beard is a strong objection to its being cultivated by me. There is a bearded variety called Mediterranean, has many good qualities, is hardy and early, but is not a very heavy yield. It is being extensively cultivated in this district, where the best varieties do not succeed so well. The Wheat Harvest commenced ten days later than common, and since that time it has rained every day. This is the 7th day it has rained.——I am expecting samples of his Egyptian Wheats, and other varieties, which I will send to your Society, if they arrive in time, for the State Fair.

In all the Southern States, in Missouri, Illinois and Ohio, the grain crop was harvested in splendid order, before the rains set in, and will be most abundant. The probability is that those wheat crops supposed to be suffering most, will be found to be less damaged than expected.

All accounts agree that corn looks finely, and that there has been no such promise of a potato crop for years, as there now is. The new crop is already in the market. In Rochester the indications are that Potatoes will yet go a begging for buyers, at 25 cents a bushel.

Of the Apple Crop, accounts indicate that we shall have a most glorious crop. From East to West, and North to South, letters speak in glowing terms of the fine prospect of this valuable of all fruits. The Baldwin and Greening are among the most delicious kinds, and these promise an abundant yield; and it is said there will be more than can be gathered, and farmers can feed their pigs on the apples, in the western part of the State, the orchards are so laden with this fruit,

Mr. M. H. Simpson, continues to meet with excellent success, in his new system of grape culture. He has shown fruit of the *second crop this year*, and in flavor and size, they are equal to the best. Mr. Simpson now obtains *three crops* of fruit from his vines in two years. There is much interest felt to know the result of this process of culture upon the vines, for a series of years. He intends to give the matter a thorough trial. Grapes were exhibited by him at the Mass. Hort. Society, all through last winter, something never before known.

The use of about forty acres of vacant land, belonging to the city, has been granted to Hon. Marshall P. Wilder, for the purpose of a great National Exhibition of the U. S. Agricultural Society, in October. Measures will be taken at once towards getting up the Exhibition, on a scale of liberality never before known in this country. The collection of fine horses will be alone, a feature of rare attraction, and very profitable. It is reported that $20,000 have been liberally subscribed, by our citizens, to insure its success.

The National Theatre will soon open for the winter season, under the management of W. M. Fleming, Esq. This gentleman has been busy during the leisure interval in preparing for the coming campaign, and in arranging fresh novelties for the attraction of the public. The stock company is very select, and many stars have been added. Mr. J. B. Rich, well known the past season at the Howard Atheneum, is announced as the future Treasurer. Mr. Rich has been long known to our theatre goers as a pleasant and efficient gentleman, ever desirous to please his patrons; and Mr. Fleming has made a very wise selection, for which he has the thanks of the public. I shall allude to this establishment again, during the season.

J. S. Redfield, Publisher, New York, has a literary treat for the fall season, and his list of books, comprises many valuable Histories, as well as books for the young. Among them I would mention: "The *Illustrated Shakespeare*," in one volume, with 40 new illustrations, a valuable library edition; "The *Queens of England*," of the House of Hanover, by Mr. Doran; "The *Battles and Sieges of the Peninsular War*," by Col. W. F. P. Napier—these are selected from

his large work; "The *History of Texas*," from its first settlement to the annexation—a valuable contribution to our histories; "A *New Series* of *Jurenile*s,"—Dickens' little folks, in a series of 18mo. volumes, with illustrations, viz: "Little Nell," "Oliver and the Jew Fagin," "Little Paul," "Florence Dombey," "Smike," "The Child Wife"—quite a bonne bouneo for the young folks. I give you the above at length, as it may interest your readers, and give them an opportunity to make their selections.

J. C. Derby, New York, has nearly ready for publicstion, "*Pen Pictures of the Bible*," by Charles Beecher—with introduction by Harriet Beecher Stowe, a truly valuable work; "The Lady's Guide to Perfect Gentility," a new book of etiquette; "The Rainbow around the Tomb," "The Marys of History;" "Beecher's lectures to Young Men;" "Home," or recollections of our Family. From the well known popularity of all books from this house, we may expect a treat in the above works, and others I have mentioned—a goodly list to while away the long evenings. These books will all be duly noticed, as they appear, in the Book Department, where their respective merits will be criticised.

The Hotels in Boston have been fuller the present week, than at any other time this year Large numbers of visitors are here from the extreme West and South, and business is reviving. The weather has been quite warm, and the *seashore* is again reserted to by the uneasy ones.

De Quincey.

[For the California Farmer.]

THE MARINER'S GRAVE.

'Tis not on the hill where the breezes blow,
'Tis not where the wild bee booms,
'Tis not in the vale where the daises grow,
'Tis not where the cowslip looms;
Lo! 'neath the wave the Mariner sleeps,
Near the mermaid's coral cave;
On a rocky bed where the sea-horse creeps—
And above the tempests rave.

'Tis not in the tomb, the quiet tomb,
The Mariner rests his head;
'Tis not in the charnel's sicky gloom,
'Mid festering heaps of dead;
Lo! 'neath the wave the Mariner sleeps,
'Mid the sea-snake's golden coils;
Where the lonely green-haired syren weeps,
And the troubled ocean boils.

'Tis not in the lonely burial ground,
'Neath the shady cypress bough;
'Tis not where the skylark a nest has found,
Where the silken grass-blades grow:
Lo! 'neath the wave the Mariner sleeps,
In Amphitrite's ice-roofed halls;
Where the sportive dolphin merrily leaps
Round the sparkling spar-built walls.

'Tis not on the cliff nor the mountain side,
Where the eagle builds her nest;
'Tis not in the sculptured tombs of pride,
Where saints and monarchs rest:
Lo! 'neath the wave the Mariner sleeps,
'Neath the wide, the boundless wave;
Where the north wind moans, and the torrent sweeps,
A dirge o'er his lonely grave.

Antiquus.

[For the California Farmer.]

DAY.

Is not morning pleasant and should you not risn
Ere the Day-Star has left the grey eastern skies,
To see that bright beacon conceal its last ray
In the more splendid light that ushers in Day?

While the roses and pinks and violets fair
Through "pearls of first water" are scenting the air,
While in beautiful dress all nature seems gay
And rejoicing to see the dawning of Day?

Then come from your chamber, fresh, hearty and strong,
And be greeted at once with liveliest song
By the Robin and Lark, in their rural lay
Sung never so sweet as at early Day.

Is the noon not splendid! when the sun on high
Midway in the zenith is ruling the sky!
While fiery beams with intensity play,
E'en thick heads acknowledge the power of Day.

But the charm of the day at *evening* we see
Expressed in rich colors, magnificently;
The sun goes away in such gorgeous display,
That we never regret the closing of Day.

To those who act wisely and work with the sun,
This life is no burden, their work is well done;
While onward and upward, pursuing their way,
Their path is as glorious and perfect as Day.

'49.

Rather Amusing.—A correspondent of the New York Spirit of the Times gives the following amusing yarn: I heard a good story the other day which I will give you. A distinguished member of the Legislature was addressing a Temperance Society and he got rather prosy but showed no disposition to "let up," though the audience waxed thin. Finally the presiding officer got excited, and repairing to a friend of the speaker's, inquired how much longer he might be reasonably expected to speak. Whereupon the friend answered he didn't exactly know: when he got on this branch of the subject he generally spoke a couple of hours. "That'll never do—I've got a few remarks to make myself," said the president: how shall I stave him off?" "Well, I don't know. In the first place, I should pinch his leg; and then if he would not stop, stick a pin in it." The president returned to his seat, and his head was invisible for a moment. Soon after, he returned to the "brother" who had recommended the process of treatment and said: "I pinched him and he did not take the least notice at me; I took a pin to him but he didn't seem to care a farthing. I cursed at him and he kept on talking at last to me." "Very likely," said the wag, "that leg was cork."

Ladies' Department.

[For the California Farmer.]

Sutter County, Sept. 16, 1855.

Messrs. Editors: Sirs,—I will feel much obliged by your inserting in your columns the enclosed Acrostic to "Betty Martin." Having been a constant reader of your useful journal, I have heretofore read with silent but increasing admiration, the poems of Miss Betty Martin, until her stray lines handed to your by her uncle came to hand, which have incressed my ardor beyond the limit of admiration, and forced me, though naturally timid, to offer these lino as a tribute of love to her. Should they meet with a favorable reception, I may, emboldened by love, venture out from my place of seclusion, and "try what frail mortal man may do."

A Farmer.

ACROSTIC.

B eningly fair must he that maid,
E nchanting all her ways;
T aught by the power of love divine,
T hat wrote the "rural lays."
Y nur last stray verses, "Betty,"
M y glowing love inspires,
A nd every line and every verse
R ekindles all its fires.
T hen let not vain the passion be,
I n faith receive these lines from me;
N n nther maid I'll love but thee.

A Farmer.

Helen's Introductory.

Nicolaus, Sept. 16, 1855.

Messrs. Editors: Observing that a share of your columns are dedicated to ladies, I have penned a few lines, as a pastime, for the California Farmer, should you think proper to give them room in your paper. I know nothing of preparing a piece for the press, this being my first attempt at anything of the kind; but should you find in the lines I send you anything worth setting your type for, you can know my real name if you wish. At present I am

Helen.

[For the California Farmer.]

Come to the Farmer's Cot.

Unacquainted as I am, dear reader, with this great world of ours, (having been reared in the humbler walks of life,) I fear to speak to you; but feeling a strong impulse to do so, I for the first time introduce myself to you.

I have for some time been seated upon the wide spreading shores of the great Pacific, with its thousands of human beings teeming before me, brought in from the four corners of the globe. I sit and gaze with a vacant stare at what is passing around me; but ever and anon I have heard, on either side, a heavy sigh, a deep aspiration going forth from the mixed multitude of Adam's race, for some congenial spirits, for neighbors, friends or brothers, that we could grasp by the hand, to fill the dreadful void that has been caused by severing ourselves from the social bands that bound us to our father land. Amid the throng my eye first sought the Watchman of Zion. As I gazed, there first advanced "old Pope Pius," in his robes of black and then of white, and with a seeming devotion so great that many were his followers; but ere long those footsteps were retarded by a mighty gathering band, robed in the invisible. Next landed upon her broad shores the Protestant, with a firm undaunted step, and his robes were of the purest white, each wearing a badge of different hue. But I saw as they passed that some had sprinkled their robes with gold dust, until my eyes were dazzled and I could not discern the badge they wore. Some were covered with dust, others, alas! had stained their robes with wine, and few were those that remained untarnished amid the jostle and confusion. Then came the Fraternal Brother, with his secret smile. Some caught the sight of that secret smile and glided silently on; but their "beacon of light" being hid under the bushel, I caught but a faint glimpse as they passed, and knew no guide to mark their course. And here and there stood a guileless youth, reared by the careful hand and watchful eye of a fond parent; but, wandered far away and lost amid the motley throng, he stood amazed, for many were the dark spirits that glided before him, and very many their devices to lead him to ruin. And again my heart was pained as I beheld here and there a fair maiden or a youthful bride (whose protection had been lured by the passing throng,) stand shuddering at their position, for the scorching sun of California was pouring full upon their unveiled brows, and at their feet "Satan's Serpent" lay coiled vaunting himself in all the varied hues of the dying dolphin, or shining in the beauty of the glow worm.

I began to tremble from fear and casting my eyes in another direction I saw at no great distance the Farmer's Cot. I resolved to attempt it. I had yet power to move. I sought the humble king-

eot, and the door being open I entered. There neatness, frugality and plenty reigned. Happiness and contentment smiled a hearty welcome as I entered, and there sat "Betty," singing her "Rural Lays;" sweet "Alice," warbling forth her cheerful notes; "49," "Agricola," and "Dame Fortune," had already assembled there. Oh! how I longed to join that social band; but my voice being untuned for song, I had no power to express the "music of my soul," so I sought to mingle with the servant's of the Farmer's Cot, that I might be happy in listening to their varied songs.

Reader, should you ever become bewildered with the changing world around you, seek the Farmer's Cot, enter into all its joys and be happy, for there true happiness is often found.

Helen.

Hope on!

Hope on, hope ever—
Despair? no, never!

Hope is the great motive power of man; it is courage, energy and perseverance; it is the secret of success, the accomplishment of the great physical and intellectual achievements of life; it imparts to us dying mortals an impulse which knows of nothing but success; it heeds not the whispering voice of discouragement, but with a firm purpose it keeps its eye steadily fixed upon the desired end and never yields till it is realized. Would an Adam Clark ever been numbered as a star of the first magnitude in the literary firmament, had his energies not been aroused? A Patrick Henry, whose voice shook the senate halls, and whose eloquence stirred men's souls—did not Hope keep alive the active energies of that lofty mind? Now, here was Columbus, who had conceived the idea that more land lay west of the blue waters of the Atlantic. It was this that launched his ship upon the unexplored ocean. Did he not often pray for the sublime rising of the curtain of the great sea? This fired his soul to quell the fears of his despairing companions, made him overcome every difficulty, sustained him in many a perilous hour, till in May, 1492, he proudly anchored his vessel off the coast of the New World, and saw the Spanish flag float triumphantly in the breeze of the Western Hemisphere. Did it not happen to Daniel Webster to be born where his brothers and sisters were in a log cabin raised, among the snow drifts of New Hampshire, at a period so early as that when the smoke first rose from its rude chimney and curled over the frozen hills—there was no similar evidence of a white man's habitation between it and the settlements on the rivers of Canada. Webster had many a gloomy day, many an obstacle to overcome, many a barrier to break down. Till the age of fourteen Daniel Webster only went to a distant school; but always showed a remarkable fondness for books, and a great desire of accomplishing something great. He was sent to Exeter Academy, where he remained for a short period. When Daniel, dressed in a full suit of homespun, left his father's farm-house to enter college, he rode on the least valuable of his father's horses, and carried his library and his wardrobe in a pair of saddle bags. He graduated at the age of nineteen, and was said never to eat the bread of idleness, but became the Demosthenes of America, and esteemed minutes and hours as grains of gold.

Hope inspired Henry Clay, who was the fifth son of a Baptist minister, who died when Henry was five years old. The circumstances of his family, it is said, were so straitened that the boy was not given even a good elementary education, and was at the age of thirteen a clerk in a dry good store at Richmond, Va., from which he afterwards rose to eminence and fame. Was not Washington's desponding heart lit up with Hope when he crossed the Deleware to take Trenton, the capital of New Jersey on the night of Dec. 25, 1776. The night was sleety and cold; the river was filled with floating ice, and almost impassable; the roads were sheeted with ice and slippery. His men were poorly clad, some without shoes and covered only with rags. What will not men endure for freedom? Washington's motto was—"'tis better to Hope once than to despair."

How sleep the brave who sink to rest,
By all their country's wishes blest!
When [illegible] with dewy fingers cold,
Returns to deck their hallowed mould,
She there shall dress a sweeter sod,
Than Fancy's feet have ever trod.

By fairy hands their knell is rung,
By forms unseen their dirge is sung
There honour comes a pilgrim grey,
To bless the turf that wraps their clay,
And Freedom shall a while repair,
To dwell a weeping hermit there.

And every [illegible] with [illegible] history [illegible] lessons on the [illegible]

Who forgets the Plymouth rock, so famous in story? Is it not replete with many a memory? Did not the weary pilgrims leave Holland with oppressed and sinking spirits, and cross the trackless sea to find a haven of rest beyond the hand of religious persecution? Did not the bright star of Hope illume their gloomy pathway and fortify their desponding hearts against surrounding difficulties? This cheered them in their gloom. And did not the beacon star of Hope inspire the noble heart of Franklin, the young printer, the philosopher, whose name is heralded by the lightning flash and the thunder's deafening roar? Such energy nerved the arm of our forefathers to stain freedoms soil with patriotic blood—to purchase at a price so dear the freedom and liberties we now enjoy.

The toils of war and danger past,
They reap a rich reward at last;
Their pure souls mount on cherubs wing,
